##### 3.1.1 Test Limits

For the 850MHz band, FCC §22.913 states that the maximum ERP of this device shall not exceed 7 Watts. IC SRSP-503 Issue 7, states that this device shall not exceed a maximum EIRP of 11.5 Watts  
For the purposes of this test report, the 7 Watt ERP limit stipulated in FCC §22.913 has been converted to an equivalent EIRP value of 11.5 Watts.  
For all other limits, refer to the values stipulated in the corresponding tables.

### 3.1.3 Conclusion

Host devices using the gains shown in the above table would meet the EIRP requirements for FCC and Industry Canada. Note that these values do not consider RF exposure requirements.

#### 3.2.1 Test limits

As specified in Table 1B of 47 CFR 1.1310 – Limits for Maximum Permissible Exposure (MPE), Limits for General Population/Uncontrolled Exposure.

| Frequency range (MHz) | Power density (mW/cm <sup>2</sup> ) |
|-----------------------|-------------------------------------|
| 300 – 1,500           | f/1500                              |
| 1,500 – 100,000       | 1.0                                 |

Limits specified per RSS-102, Issue 5.

| Frequency range (MHz) | Power density (W/m <sup>2</sup> ) | Power density (mW/cm <sup>2</sup> ) |
|-----------------------|-----------------------------------|-------------------------------------|
| 300 – 6000            | $0.02619 f^{0.6834}$              | $mW/cm^2 = W/m^2 * 0.1$             |

Equation OET bulletin 65, page 18, edition 97-01: 
$$S = \frac{PG}{4\pi R^2} = \frac{EIRP}{4\pi R^2}$$

Where:

S = power density

P = power input to the antenna

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the centre of radiation of the antenna
