RE: FCC ID: LJPKNW-1

I have a few comments on this SAR Application.

- 1 The reference dielectric and S/M values should be within 5%% of the measured values taken in the System Accuracy Verification. However, at 835MHz for the head verification done on 2/22/02 shows a reference value of 42.3 and a measured value of 39.5 for dielectric ( $\epsilon_r$ ). While this is within the +/-10% of the target value in IEEE std 1528, and explanation of the excessive percentage should be made. Please provide an explanation letter for this variance. You may upload this letter to the ATCB website for this application.
- 2 The Crest Factors used in the report do not have sufficient explanation as to their derivation or source. Please provide an example of the determination of the Crest Factor.
