Caroline:

One more item. I cannot find schematic diagrams for this product among the files submitted so far. These will be held confidential, per the letter request (along with the detailed operational description, block diagram, and internal photos). Can you provide?

Thanks,
Roland

Caroline:

My review of the application so far indicates only the following issues:

- 1) PSD compliance. A table showing PSD compliance for the various antennas is needed. This was furnished for the prior application, and a copy of that one is attached. Please update for relevance to the present application and send to me.
- 2) FCC ID label location. The photos of the label are fuzzy and the label text can't be read. Please furnish an electronic copy of the artwork drawing, showing the text clearly. Also, the label location is not obvious from the photos. Can you provide a photo further away from the EUT, and perhaps annotate with an arrow pointing to the label?
- 3) Configuration photos. David C: Can you provide a line-conducted config. photo, and clearer versions of the photos shown on page 42 of the PDF file, taken with the patch antenna? (One of these may be the line conducted setup, but it is not clear enough to tell.)

Thank you,
Roland
