Setting up your Fitbit Aria 2

For the best experience we recommend pairing your scale to the free Fitbit mobile app for iOS, Android, or Windows 10.

Your Fitbit account asks for information such as height, weight, and gender to make various calculations such as basal metabolic rate to estimate calorie burn. Your name is visible to Fitbit friends by default. You have the option to share your age, height, or weight with Fitbit friends, but the information you provide is private by default.

Networking Requirements

Aria 2 connects directly to your home's Wi-Fi network and supports the following network configurations:

- Wireless 802.11b/g/n, 2.4 GHz standard
- WEP / WPA / WPA2 personal security
- Automatic (DHCP) IP setup (static IP configuration not supported)

Aria 2 requires an 802.11b/g/n-compatible network to connect and sync your scale data to your Fitbit account.

Installing the Fitbit app

The Fitbit app is compatible with more than 200 mobile devices that support iOS, Android, and Windows 10 operating systems.

To get started, install the app and pair your scale with your mobile device:

1. Make sure the Fitbit app is compatible with your mobile device by checking <http://www.fitbit.com/devices>.
2. Find the Fitbit app in one of these locations, depending on your device:
 - The Apple® App Store® for iOS devices such as an iPhone® or iPad®.
 - The Google Play™ Store for Android devices such as the Samsung® Galaxy® S5 and Motorola Droid Turbo.
 - The Microsoft® Windows Store for Windows 10 mobile devices such as the Lumia™ phone or Surface™ tablet.
3. Install the app. Note that if you don't have an account with the store you'll be required to create one before you can download the app.
4. When the app is installed, open it and tap **Join Fitbit** to be guided through a series of questions that help you create your Fitbit account, or login to your existing account.
5. Continue following the onscreen instructions to connect, or *pair*, your Aria 2 to your mobile device. Pairing makes sure the scale and mobile device can communicate with one another (transfer data back and forth).

Next, connect your scale to your Wi-Fi network:

1. Follow the onscreen instructions to select your preferred Wi-Fi network from the list of available options. By connecting Aria 2 to your Wi-Fi network, your

scale will automatically and privately transfer, or *sync*, your stats wirelessly to your Fitbit account after each use to help you track your progress.

2. Enter your Wi-Fi network password and Aria 2 will attempt to connect automatically.

When you're done connecting to the Wi-Fi network, choose a personalized icon that will appear on your Aria 2's screen after each use and read through the guide about your new scale.

Verifying your scale setup

Now that you've linked your scale to your Fitbit account, you'll want to verify that the scale appears under your devices. Follow these steps to confirm your setup:

1. Login to the Fitbit app on your mobile device.
2. Tap the Account icon (.
3. Look for Aria 2 listed under your devices.

Changing your Wi-Fi network

If you've changed the name, password, router, or provider of your Wi-Fi network, you'll need to reconnect your Aria 2 to the updated network using the setup method above.

For step-by-step instructions, see help.fitbit.com.

Using Your Aria 2

Your Fitbit Aria 2 scale measures your weight, body fat percentage, and BMI. When connected your Fitbit account, measurements from your scale will automatically and privately sync to your dashboard.

Completing a weigh-in

Follow these steps to complete a weigh-in on your Aria 2:

1. Place the scale on a flat, hard surface.
2. Remove your socks and shoes and then step onto the scale while barefoot.

Aria 2 will display your weight and body fat measurement.

3. Step off the scale. Aria 2 will automatically send your stats to your dashboard.

Viewing your data

After you've weighed yourself and your Aria 2 has synced, you can view your data in your dashboard. The dashboard is where you'll track progress, view your stats including lean mass on a graph, and manually enter or delete a weight.

For more information, see help.fitbit.com.

Inviting other users to use the scale

Up to eight users can sync their Fitbit accounts with a single Aria 2 scale. If someone who does not have an account linked with the scale steps on the scale, only their weight will display (body fat percentage and BMI won't appear). Registered users will see this weigh-in attributed to "Guest".

For step-by-step instructions, see help.fitbit.com.

Reassigning a measurement

If two users on the same scale are close in weight or body composition, your Aria 2 will prompt you to select the correct user noted by their personalized icon. If an incorrect user is chosen, or if a weight is improperly attributed, you can reassign it to the correct user in the Fitbit app or on the [fitbit.com](https://www.fitbit.com) website.

For step-by-step instructions, see help.fitbit.com.

Choosing Regular or Lean modes

“Lean” mode is intended for professional or very high-level athletes like marathon runners or body builders. Individuals with exceptionally low body fat relative to their muscle mass may want to consider lean mode to improve the scale’s accuracy; however, many very fit and active people still get more accurate readings in “Regular” mode, which is appropriate for most users.

For step-by-step instructions, help.fitbit.com.

Ensuring accuracy

Use these tips to get the most accurate and consistent readings from your scale:

- Use your Aria 2 while barefoot. The scale cannot measure body fat percentage if you’re wearing shoes or socks.
- Make sure your feet are dry before weighing yourself.
- Place your Aria 2 on a hard, flat surface during use. Using the scale on a soft surface - like carpet or linoleum - may affect the accuracy of the Aria 2’s readings.
- Balance your weight evenly between both feet while standing on the scale.
- Weigh yourself at the same time each day to see consistent trends. Your weight and body fat percentage will naturally vary over the course of the day.
- If your Aria 2 is picked up and moved between measurements, or stored sideways against a wall when not in use, the scale will go through a calibration process the next time it is used for weighing. Up to two consecutive weigh-ins will then be required before your scale is recalibrated and again displays consistently accurate measurements.

NOTE: Body fat percentage, BMI, and lean mass measurements require that your Aria 2 scale has been set up with your Fitbit account. You do not need to complete this setup to weigh yourself.

Factory reset

Factory reset clears all user data from the scale including stored weights and Wi-Fi networks. To factory reset your scale, complete these steps:

1. Turn your scale over and pull up on the tab to remove the cover from the battery compartment.

2. Remove the batteries.
3. Press down on the small button directly above the battery slots.
4. While continuing to press down on the button, reinsert the batteries. Be sure to press down on the button for at least ten seconds.
5. Return the cover to the battery compartment and press down until it's secure.
6. Turn your scale over to begin the setup process.

Fitbit Aria 2 General Info & Specifications

Sensors

Four load cells measure weight. Body fat information is measured through electrical impedance and calculated based on weight and user account data.

The scale measures body fat using bioimpedance analysis. Indium tin oxide (ITO) electrodes form a pattern on the top of scale and send a small, safe signal through the body to measure impedance.

Limitations

- The scale's weight range is 10-400 lbs. (4.5-181.4 kg).
- Aria 2 is not user serviceable. If you need assistance with your scale, [contact support](#).

Batteries and power

- 3 alkaline 1.5V size AA batteries included (Operating max: 3.3V, 0.1A / 300mW)
- No power cord necessary

To change the batteries in your Aria 2, complete these steps:

1. Turn your scale over and pull up on the tab to remove the cover from the battery compartment.

2. Remove the batteries.

3. Insert 3 alkaline 1.5V size AA batteries as shown in the compartment.

4. Return the cover to the battery compartment and press down until it's secure.
5. Turn your scale over and wait a few moments for Aria 2 to calibrate before starting your weigh-in.
