TELEMETRY SYSTEM

MT-R FHS TELEMETRY SYSTEM

Safe Handling and Precautions

To use your purchased R/C System properly and safely, please read this instruction carefully and make sure to follow the precautions. Improper use of the product or negligence of following safety precautions can cause trouble to others or harm to the user.

■ For safety, please make sure to follow each of the precautions below.

⚠ Warning   Precautions for Installation and Operation

● When turning the power switch of R/C System on, please turn on in order of 1.Transmitter → 2.Receiver. And when turning the power switch off, please do so in order of 1.Receiver→2.Transmitter.

☆ If you reverse the order of the switches, it causes sudden high rotation of the engine and the motor and it's extremely dangerous.
● Please use electrical noise countermeasure on the body of your car.

☆ If metals rub against each other, it causes electrical noise which may lead to abnormal performance. Please be sure that all screws and nuts are not loose.

☆ Nitro or gas engine and electric motor can cause noise also. Please use a noise countermeasure such as a plug with resistor or noise killer condenser.

● Please make sure to run a performance check (signalreception test) of R/C System before operation. When it moves abnormally or it doesn't move, please don't operate. Even if the test result on a desk is normal,please be cautious when operating for the first time especially, since the radio wave arrival distance varies depending on the installation method of the receiver, how the antenna is set, the direction of the transmitter antenna is facing and geography.

● Never operate on a rainy day.

☆ The interior of the transmitter is built with sensitive electronic parts. If water runs on the surface of the case and enters inside, it can cause abnormal performance or malfunction and it can be dangerous.

☆ If the receiver or a servo sinks in the water, immediately collect it and dry the interior. When the interior is dry, please submit it to the Sanwa Service for inspection even if it performs normally.
● The receiver is a precise instrument. Please do not add a strong impact or vibration.

☆ Use a thick sponge to prevent vibrations. Install the receiver as far as possible from the speed controller, motor and the battery.

● When installing the receiver on a metallic chassis or a carbon chassis, use three layers of double adhesive tape pieces to keep the receiver from touching the chassis.

● When there is a radio disturbance, change the installation location of the receiver or change from a vertical placement to a horizontal placement or vice versa.

● Don't place a motor cord or a battery cord close to the receiver since it can cause abnormal performance.

● Keep the antenna of the receiver out as much as possible. And keep it straight and stretched. Don't cut the extra length of the line or bend it.

☆ It's dangerous when the antenna is short since the range of travelling becomes narrow.

☆ Never cut the antenna.
● Don't place the antenna close to a motor cord or a battery cord.

● Using a conductive piano wire on a metallic chassis or carbon chassis can cause abnormal performance from electrical noise. Don't place a piano wire close to the chassis.

⚠ Warning   Careful When Driving

When operating an RC car, please make sure to follow the following notes and avoid giving trouble to others.

● Maintain the body of the car (boat) in a perfect condition and check the safety.

● Do not operate an RC car in a crowd or on a public road.

● Make sure to disconnect the connector of the power battery and remove the power battery from the car after operation.

● When operating simultaneously with other RC users, make sure to have a control staff and follow the instruction of the control staff.

● Try not to interfere with other people's operation.

● Be sure to apply for a radio control insurance.

● For application to apply a radio control insurance, inquire a radio control operator registration agency.

● Be sure to install a "muffler (sound absorber)" with a silencing effect on an engine car.

● Don't start engine early in the morning.

● Please make sure to clean the location used for operation before you leave.

⚠ Caution   About Usage

● Do not use this RC system for other than model use.

● Since this product is manufactured for models based on the Radio Law in each country, it cannot be used in countries other than your original place of purchase.

⚠ Caution   Daily Care

● When the exhaust of the engine or fuel is on the radio, wipe it with a soft, dry cloth. When it gets dirty, please wipe it with a tightly squeezed clean soft cloth impregnated with water or neutral detergent. Thinner, benzene, alcohol, motor cleaner, brake cleaner, etc. may cause surface finish to deteriorate or degenerate, so please do not use.
⚠ Caution   Handling Transmitter

● Please do not hit, drop or cause strong shocks. In addition, if you touch the transmitter, receiver, servo, FET speed controller, etc. with hands applied with tire traction agent, it will cause breakdown or case deformation.

⚠ Caution   About Storage

● Do not store in following places.

☆ Extremely hot place or extremely cold place.

☆ A place that is exposed to direct sunlight for a long time. Especially if you leave it in a place where direct sunlight hits like in a closed car window, the interior temperature becomes 80 0 C or more depending on the season, so please be careful as it may cause deformation or breakdown.

☆ A place with high humidity, poor ventilation.

☆ A place with considerable vibrations.

☆ Places with high dust places subjected to steam or hot air.

☆ A place that gets exhaust gas from an engine or a place near the fuel tank.
Meaning of the mark

| ⚠ Caution | Things you are expected to do to prevent accidents and injuries. |
| ⚠ Warning | Things that you should follow in order to prevent break down. |

Safe Handling and Precautions

⚠ **Warning** **Note Precautions for Safe Use**

● 2.4 GHz frequency band is not only used for radio control. This frequency band is shared with ISM (Industry, Science and Medical) band. It can be affected by microwave ovens, wireless LAN, digital cordless telephones, audio equipment, Bluetooth of game machines or cell phones and short-range communication such as VICS. Also, be cautious about being affected by amateur radio and premises radio stations for moving body identification since this frequency band is used for them as well. When a harmful radio frequency interference is done to an existing radio station, stop the transmission of the radio frequency immediately and take a measure to avoid the interference.

● For RC circuit, minimize the use of equipment that can affect 2.4 GHz systems and make sure to check the safety beforehand. Also, follow the instruction of the facility manager.

● When operating the models behind a building or a steel tower, blocking the direction of radio wave transmission can cause reduction of operation response or loss of control. Always operate within the range you can visually check.

● Don't grab the transmitter antenna. Doing so can be dangerous since it can weaken the radio signal output and narrow the range of operation.

● Don't attach any metal parts around the antenna of the transmitter.

● If you have the transmitter's antenna extremely close to a servo or speed controller other than the receiver, it can cause malfunction but it is an influence of a strong high frequency output and it is not abnormal.

● The receiver is a precise instrument. Don't subject it to strong impact or vibrations. Use a thick sponge to prevent vibrations.

● Keep the antenna wire of the receiver out as much as possible. And keep it straight and stretched. Don't cut the extra length of the antenna line or bend it.

● Keep the antenna wire of the receiver out as much as possible. And keep it straight and stretched. Don't cut the extra length of the antenna line or bend it.

● Don't place the antenna wire of the receiver close to a electrical noise source like a motor wire or a battery wire.

● When installing the receiver on a metallic chassis or a carbon chassis, use layers of double adhesive tape pieces to keep the receiver from touching the chassis as much as possible.

INDEX

Structure and the Standard of the Set

STRUCTURE OF THE SET

	MT-R RX-493i PC (Primary Component)
＜A＞ Transmitter	MT-R (TX-4101)
＜B＞ Receiver	RX-493i
＜C＞ Servo	－
＜D＞ Accesories	Brake Trigger +1/+2 x each 1 Receiver Dust Cover x1 Bind Plug x1 Antenna Pipe x1 User Manual x1

●Please check items before use

SET SPECIFICATION

＜A＞ Transmitter

Product No.	MT-R (TX-4101)
Output Display	Digital display (Power Source Voltage Display)
Modulation	2.4 GHz Spread Spectrum System
Power Source	AA BATT x4 (Corresponding VOLT: DC4.8 - 7.4 V)
Weight	366 g

*Be careful with the input voltage.
 If voltage above allowable voltage is inputted, the transmitter will be damaged.

＜B＞ Receiver

Product No.	RX-493i
Modulation	2.4GHz Spread Spectrum System
Size	26.0x23.2x14.0mm
Power Source	DC3.7～7.4V
Weight	6.2 g

Before Using

ADJUSTING THE STEERING AND THROTTLE TENSION

MT-R can adjust the tension of the steering/throttle trigger to match operation of the steering/throttle to the user's preference.

Adujsting the Steering Tension

By inserting a hex wrench driver (1.5mm) to the place where the arrow is pointing at in the illustration on the right and turning, you can adjust the tension of the steering spring.

*The spring tension is the softest at the time when the product is shipped out from the factory. As you tighten with a hexagon wrench driver (1.5mm), the spring tension will be hardened.

Adjusting the Throttle Trigger Tension

By inserting a hex wrench driver (1.5mm) to the place where the arrow is pointing at in the illustration on the right and turning, you can adjust the tension of the throttle spring.

*Please do CALIBRATION when changing steering and throtte tention. (p.48)
ADJUSTING THE ADJUSTABLE TRIGGER

MT-R can adjust the throttle trigger position fiting to the user's hand size.

Adjusting the trigger position

Loosen the fixing screws of the trigger on the back of the transmitter. Then, adjust the adjusting screw of the trigger position on the back of the transmitter to set the trigger at the position of your preference. When you turn the adjusting screw of the trigger position clockwise, the trigger position gauge moves to the direction A. By turning it counter clockwise, the trigger position gauge moves to the direction B.

*The range of the trigger movement is 7mm. If you turn the screw forcefully beyond the range, it can cause malfunction. Once you set the trigger position, tighten the fixing screw and adjusting the trigger is done.

*Be careful with the direction of turning the screw because the trigger position is set at the furthest point of the A side at the factory.

 *Setting Advice
 Please fit trigger position to your finger naturally.
 It would be smoother to operate braking.

Fixing screw of the trigger

Adjusting screw for the trigger postion

Trigger position gauge
Adjustable range: approx. 7mm
Before Using

ADJUSTING THE ADJUSTABLE TRIGGER

Adjusting the brake trigger

You can adjust brake trigger position accroding to your fingers by replaceing the included brake trigger.
Standard Size, +1 Size, +2 Size is included.

1) Remove the brake trigger fixing screw.

2) Select Brake Trigger according to your fingers.

3) Fix the brake trigger by the screw.

*Setting Advice
If you feel much gaps between a finger with trigger, please change brake trigger to +1 or +2.
After changing the brake trigger size, please check the differences while driving.
Combination of trigger position and brake trigger adjustment would give optimic operation by fiting to personal hand.

Brake trigger
Brake trigger fixing screw
(+1)
(+2)
ABOUT THE POWER SOURCE

HOW TO PLACE THE TRANSMITTER BATTERIES
<1>Open the battery compartment cover by sliding the cover to the direction of the arrow while pressing it lightly.
<2>Place 4 size AA batteries. Make sure to observe correct polarities.
<3>Align the convex part of the battery compartment cover and the groove of the battery compartment, slide the cover to the direction of the arrow and close tightly.

ABOUT BIND

● About Bind
Each MT-R transmitter has own ID number for transmition. Receiver memorizes the ID number to bind.
After binding, the transmitter can work with the receicer.eceiver and the antenna are installed.
● BINDING is not done at the factory. Please make sure to complete BINDING before use.
● When the receiver is new, make sure to complete BINDING for the transmitter and the new receiver.
● Make sure to use the set of the transmitter and the receiver that completed BINDING.
*About details of bind, please refer p.43-44 in this manual.

● RX-493i

RX-493i can evaluate received signal strength and packet delivery ratio from transmitter.
*MT-R cannot check received signal strength and packet delivery ratio.
RX-493i can store 2 transmitter ID Number. It is able to combine using individual transmitter which is different setting in endurance race .
If you bind with 2 different transmitter, the receiver store the different transmitter and can operate by transmitters without re-bind.
*CANNOT operate by the 2 different transmitter at the same time. 2 ID store system is only compatible with M17, MT-5, or MT-R.
Throttle neutral position or operation quantities might be different each transmitter. Please adjust each transmitter setting to fit chassis linkage.
When setting SSL compatible devices by MT-R CODE AUX function, please connect SSL compatible device to SSL port.
MUST set fail-safe setting on each transmitter.
Please set same RF mode and response mode as 1st transmitter when you bind 2nd transmitter. If it was different mode, cannot bind with 2 transmitters.
*If 2nd transmitter was different RF node and response mode from 1st transmitter, 1st transmitter ID No. is deleted and only write 2nd transmitter.
*If you bound 3rd transmitter, 1st transmitter ID No. will be deleted.
*When using first time, please bind with receiver. (p.43)

ABOUT HANDLING THE ANTENNA

● Reception distance may vary depending on the location where the receiver and the antenna are installed.
● To protect the reception part (3 cm from the top) of the antenna, make sure to place the antenna in the antenna pipe as shown in the right illustration so that the top of the antenna is not exposed outside of the antenna pipe.
● Don't bend the antenna reception part or the antenna coaxial cable because breaking can occur inside.
● Don't pull the coaxial cable forcefully. It may damage the receiver interior.
● Install the antenna on an RC car so that the antenna reception part is in as high place as possible.
● Don't cut or bind the antenna reception part or the antenna coaxial cable since the receiver sensitivity might decrease.
● Keep the receiver antenna away from the motor and the ESC / FET Speed Controller (including cables) and raise it straight.

Antenna Pipe

Antenna

ABOUT CONNECTION SETUP

Please refer the below picture for receiver and servo connection
●Connection example in case of using in EP car

BATT
Connection with CH2
CH2
CH1
Connection with CH1

Power battery
Motor
*When using PGS Servo with SGS-02, PGS servo cannot set by CODE10 at the same time. Only SGS-02 can be set when connect with PGS servo.

■Case of connecting PGS servo and SUPER VORTEX Gen2/PRO/SUPER VORTEX Stock to SSL port

SSL Port
Short Y harness

PGS servo : SSL - CH1 setting
Steering servo
SUPER VORTEX Gen2/PRO /SUPER VORTEX Stock

●Set AUX TYPE of the transmitter for both AUX1, AUX2 to CODE 10.
  AUX1 CODE10: Setting of SUPER VORTEX Gen2 / PRO /SUPER VORTEX Stock can be from the transmitter.
  AUX2 CODE10: Setting of each of the parameters of PGSⅡ servo can be from transmitter.
Note)In SUPER VORTEX Gen2 / PRO, do not assign function to CODE 10 of AUX2 by code assign of PROGRAM BOX Gen2. It interferes with CODE 10 of AUX2 of PGS servo and suitable setting cannot be done.
Note)Set SSL−CH of PGS servo to [1]. (Factory setting of PGS servo is [1].)
Note)CODE of AUX2 is used for SUPER VORTEX ZERO / SUPER VORTEX TYPE-D / SUPER VORTEX SPORT. It interferes with CODE 10 of AUX2 of PGS servo and suitable setting cannot be done. Therefore, it cannot be used along with SSL of PGS servo.
Note)When Connecting PGS servo with SGS-02 cannot change setting at the same time. When using SGS-02, Gain connector connect to SSL port.
*Please DO NOT connect another devices except SANWA SSL compatible products. About setting and connection, please refer manuals of SSL compatible product.

■Case of connecting PGS servo to 2 SSL ports

SSL Port
Short Y harness

PGS servo: SSL - CH1 setting
Steering servo
PGS servo: SSL 2 CH2 setting
Throttle servo

Switch harness
Other Empty Port
Connect the receiver battery

●Set AUX TYPE of AUX2 of the transmitter to CODE 10.
  AUX2 CODE10: Setting of each of the parameters of PGS servo can be done from the transmitter.
Note)Set SSL−CH of PGS servo used in steering servo to [1].
  Set SSL−CH of PGS servo used in throttle servo to [2]. (Factory setting of PGS servo is [1].)
Note)In case of setting each parameter by the function of CODE10 of AUX2, setting of PGS servo of SSL−port set by CODE1 of AUX2 can be directly changed from the transmitter. PGS servo not specified by CODE1 of AUX2 works on the parameters saved inside.

*Please, refer on our Website about any other examples. http://www.sanwa-denshi.co.jp

⚠ Note

・ If the connector is disconnected due to a vibration during operation, it can cause runaway. Connect the connector of the receiver, servos and switches securely.
・ Because the receiver is susceptible to vibration, impact and water, make sure to take measures for vibration-proof and waterproof. Negligence of taking these measures can cause runaway.
・ When installing the receiver, keep the receiver away from a carbon chassis and metallic chassis.
・ If metal parts installed on an RC car touch each other, it can cause noise that affects reception performance and it can cause runaway.
・ Make sure to install a noise killer condenser on the brush motor for electric RC cars. Without a noise killer condenser, it can cause noise and runaway.
・ For R/C System parts such as the transmitter, receiver, servos, ESC (FET Speed Controller) and transmitter battery, use genuine SANWA products.
  *When combining products other than genuine SANWA products, modifying, adjusting or exchanging parts is done at a place other than SANWA, we do not take any responsibility.

How to Use Each Feature

ABOUT KEY OPERATION

● The user can set up and make a calling easily with each key.

Before Driving A Car

HOW TO PLACE SERVO ARM

● Power the servo will be returned neutral position.

● Turn on binded receiver and transmitter before taking on servo horn.

● Be sure about transmitter Trim and Sub Trim are no setting (value is 0).
  In case Trim and Sub Trim did not set 0, please set 0 for these setting.

● Please place servo arm on center postion such as the below picture.
  *Servo horn angle may not be 90 degree due to RC car type.
  Please place servo horn to follow instruction manual of RC car.

OK

1. Taking off an arm from servo
2. Turn on transmitter & receiver
3. Powered the servo to be
   neutral position
4. Please place servo arm on 90 degree
   as the picture. Please use SUB TRIM for
   slight arrangement.
5. Place the servo on the RC Car.
   *Servo arm angle depends on
   EC Car. Please check and
   follow RC Car manual.

NG

Taking on servo arm before servo
does not make neutral position.
Servo arm will be neutral position
after turning on the servo.
This would be incorrect servo arm position
and it is caused to servo and car broken.
HOW TO SET REVERSE [REV]

● Please check steering operation and tire direction are same after tacking on servo arm.

● Please set REVERSE in case steering operation and tire direction are diffrerent. About REVERSE
  setting please reffer p.22 in this manual.

REV Setting Requirement

Left Operation / No Operation / Right Operation

Tire direction is right / Tire direction is left

Left Operation / No Operation / Right Operation

Tire direction is left / Tire direction is right

HOW TO SET SUB TRIM [SUB-T]

● In case servo cannot place correctly as 90 degree or RC Car manual instruction, please arrange neutral
  position by SUB TRIM setting. About SUB TRIM setting, please refer p.22 on this manual.

90°

90°

Wanted to place servo arm in
car manual but cannot place
slightly different.

Arrange neutral position by
SUB TRIM setting.
SUB TRIM AND TRIM DIFFERENCES

● SUB TRIM is for neutral position and mainly used on the pit as taking on servo horn.
  TRIM is for driving arrangement and mainly used while driving such as below picture. Please refer p.22 in
  this manual.

Before Trim Adjustment / After Trim Adjustment

Steering
No Operation

Automatically turning right or left / Go straight
*RC car did not go straight as accident.
TRIM is used for direction arrangement.

Before Driving A Car

HOW TO SET END POINT ADJUSTMENT [EPA]

● Adjust right and left maximum steering angle are same after setting SUB TRIM.

*In case of not setting EPA, right and left cornering are different as the below picture.
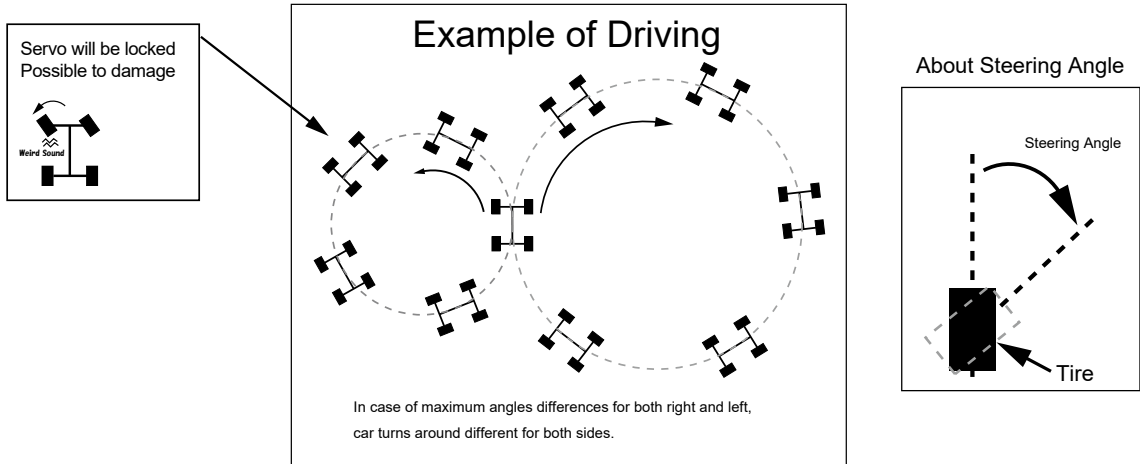

This may be caused to servo broken. Please refer p.23 in this manual.

Servo will be locked
Possible to damage

Weird Sound

Example of Driving

In case of maximum angles differences for both right and left, car turns around different for both sides.

About Steering Angle

Steering Angle

Tire

*Please arrange EPA setting as the below picture and make sure same maximum steering angles for both right and left.

Example

Before EPA Adjustment

Fully Left Operation

No Operation

Fully Right Operation

Less right maximum angle

Right And Left Maximum Steering Angles Are Different

After EPA Adjustment

Fully Left Operation

No Operation

Fully Right Operation

To Be Same for Both Right And Left Maximum Steering Angles

HOW TO SET DUAL RATE [D/R]

● About Steering Operation

In case RC car is too much cornering and difficult to drive, DUAL RATE(D/R) adjust maximum steering angle.

EPA adjust each left and right maximum steering angle.

D/R adjust both left and right maximum steering angle at the same time and same ratio.

Please refer p.18 on this manual.

D/R
100%
(Default)

100%

Full Left Angle

100%

DUAL RATE [D/R]　　　SETTING

● You can adjust steering angle when operating the steering wheel and throttle trigger to their peak.
Please adjust the steering angle to fit RC car and surface condition when driving.
*You can adjust steering for both right and left at the same time and throttle separately for high and brake sides. You can also adjust the brake side more precisely than adjusting with EPA.
● Don't increase the setting rate of dual rates (D/R) from the condition in which the linkage locks by operating the steering wheel and throttle trigger.
● You can also adjust more precisely by adjusting dual rates of the throttle side.
*A1 and A2 cannot be set even moving to D/R on A1 and A2 page.

1) Select features [ST/TH/BR] to adjust with the up and down key.

2) Determine the feature to adjust with the Enter key. Adjust the valus of DUAL RATE by up and down key.

3) During operation, the steering dual rates can be adjusted with Trim 3. It's possible to assign other features to Trim 3 with the key assign trim feature (P. 46).

*When cancelling a selected feature, operate the Back key.
*Depending on car types, dual rate is not assigned to TRIM3.

○Setting Range:
　　ST/TH: 0%～100%
　　BR: 0%～120%
○Default:
　　ST/TH/BR: 100%

TRIM 3
(TRM 3)

*Make sure that the servos do not lock to make clicking sound!

Note) The same for throttle.
⚠ **Note** • If the linkage is locked for a long period, it can cause the servo motor breakage.

SUPPLEMENT

• Adjust the end point of the steering/throttle linkage before adjusting dual rates (P. 23, 24).

How to Use Each Feature

SPEED | SETTING

● Features to control the speed of the servos used for steering and throttle. By setting, the RC car is not affected even when doing a sudden operation. On the steering side, smooth corner work becomes possible and on the throttle side, stable rising from a corner by throttle work with saved power.
*When setting AUX TYPE to [CODE], adjusting the speed feature of the AUX channel does not affect the performance.
*When setting the speed of the AUX channel, do so using steering/throttle as a reference.

[ST] STEERING SPEED

● A feature to delay the speed of the steering servos against the steering operation. You can set speed for steering forward and returning individually. For steering operation slower than setting, the speed feature does not work.

1) [ST (Steering)] with up and down key.
2) Setting on the forward side [FORWARD]
   Select [FORWARD] with the Enter key and adjust the setting value by up and down key.
   *When cancelling a selected feature, use the Back key.

   ○Setting Range: 0〜-100
   ○Default: 0

3) Setting on the Return side [RETURN]
   Select [RETURN] with the Enter key and adjust the setting value with by up and down key.

   ○Setting Range: 0〜-100
   ○Default: 0
   *Adjust during actual operation. When not using the features or when a setting value cannot be determined even after adjustment, set the value to 0% (linear).

SUPPLEMENT
• For driving an RC car, steering operation that suits the movement of the RC car is important and excessive operation is not recommended. Steering speed can minimize unnecessary operation and enables smooth cornering.
• When steering speed and steering curve are combined, the effect is doubled.

[TH] THROTTLE SPEED

● A feature to slow down the performance speed of the throttle servos and delay the response of the speed controller against throttle operation. You can set speed for entering throttle (Forward) and returning (Return) individually. The speed feature does not work with throttle operation slower than the setting.
*Setting is only for High side and Brake side cannot be set.

1) Select [TH (Throttle)] with up and down key.
2) Setting on the forward side [FORWARD]
   Select [FORWARD] with the Enter key and adjust the setting value by up and down key.
   *When cancelling a selected feature, use the Back key.

   ○Setting Range: 0〜-100
   ○Default: 0

3) Setting on the Return side (RETURN)
   Select [RETURN] with the Enter key and adjust the setting value by up and down key.

   ○Setting Range: 0〜-100
   ○Default: 0

*Adjust during actual operation. When not using the features or when a setting value cannot be determined even after adjustment, set the value to 0% (linear).

SUPPLEMENT
• For driving an RC car, throttle operation that suits the movement of the RC car is important and excessive operation is not recommended. Throttle SPEED can minimize unnecessary operation and enables smooth performance.
• When throttle SPEED and throttle CURVE are combined, the effect is doubled.
CURVE | SETTING

● Curve changes servo work rate by steering and throttle position. It responds quickly when the set value is on plus (+) side whereas it responds mildly when the set value is on minus (-) side.
● MT-R has adjustable rate controller (ARC) of linear position.
*If the AUX type is set to [CODE], curve does not work.
*Please adjust curve setting on AUX cannel to refer steering and throttle.

Adjustable rate controller (ARC)
Position at where operation is variable can be changed by adjusting the setting of POINT.
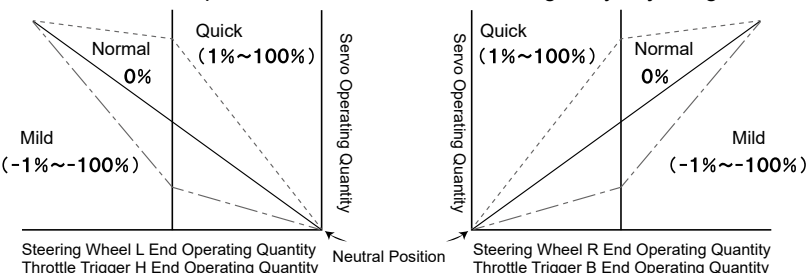

[ST] STEERING CURVE

● You can change the steering feature from Mild to Linear and to Quick.
If you find your RC car oversteering, change the setting to the minus side and if you find understeering, change to the plus side. Steering Adjustable Rate Control is a simultaneous setting for L and R.

1) Select ST with up and down key.
2) Setting Rate [RATE]
   Select [RATE] and adjust the setting value with up and down key.
   *When cancelling a selected feature, use the Back button.

   ○Setting Range: -100〜100   ○Default: 0%

3) Setting Point [POINT]
   Select [POINT] and adjust the setting value with up and down key.

   ○Setting Range: 5〜95%   ○Default: 50%

Point Setting Position

[TH] THROTTLE CURVE

● You can change the throttle feature from Mild to Linear and to Quick.
In general, when operating on a slippery road or if you find over powering, change the setting to the minus side. When operating on a high-grip road or if you find lack of power in the power unit, change to the plus side. You can set the High side and the brake side separately.
*Selection of the High side and the brake side is done by trigger operation.

1) Select TH with up and down key.
2) Setting Rate [RATE]
   Select [RATE] with with up and down key.
   Adjust the setting value.

   ○Setting Range: -100〜100   ○Default: 0%

3) Setting Point [POINT]
   Select [POINT] with up and down key.
   Adjust the setting value.

   ○Setting Range: 5〜95%   ○Default: 50%

Select H/B by Throttle Trigger

Point Setting Position
*When cancelling a selected feature, use the Back button.

1.If you feel slippy while driving drift car, please set High side point 20 to 30% and Rate -15 to - 30%. It can be more smooth and getting traction easily. *Please arrange ideal point and rate values while driving.

2. In case of using motor of stock class, please set High side point 20 to 30% and Rate 15 to 30%. It would give quick throttle timing and get more car acceleration.

How to Use Each Feature

FAIL SAFE [F/S]　　　SETTING

● Fail Safe Operation is a feature to keep the servos in a predetermined position for each channel in the event that the receiver cannot receive a signal from the transmitter. A feature to keep the servos in a predetermined position for the servo of the throttle channel (2ch) in the event that the battery voltage on the receiver side of an engine RC car goes below the set voltage is Battery Fail Safe Operation.

● Battery Fail Safe Operation cannot be set when the throttle channel (2ch) is set to FREE/HOLD (*Battery Fail Safe Operation works only for the throttle channel).
 *Don't use Battery Fail Safe Operation for electric RC cars.

1) Select F/S with up and down key and select a channel to set fail safe operation (ST/TH/A1/A2).

2) Enter the set channel and operate by up and down key.
   The fail safe mode setting changes in order of
   FREE→FS→HOLD.
   ○Setting Range: FREE/FS(-100～100%)/HOLD
   ○Default: FREE

   F/S Setting

   FREE (Free Mode)
   When thre receiver cannot receive the signal from the transmitter, the signal output to the servo stops and the servo will be free.
   FS (Fail Safe Mode)
   When the receiver cannot receive the signal from the transmitter, the servo will be held in the set position.

   HOLD(Hold Mode)
   The last postion before the signal from the transmitter to the receiver is lost will be held.

   *When the receiver can receive the signal from the transmitter again, each mode of FREE/HOLD/FS is automatically released.

3) Setting the Fail Safe (FS)
   Move to the position where the Fail Safe Operation is used. When the position is determined, holding the Enter key to set the position when the Fail Safe Operation works.
   *For safety, we recommend setting the throttle channel on the brake side when setting the Fail Safe.

4) Setting the Battery Fail Safe Operation
   After setting the throttle channel position, move the cursor to [B-F/S] to set the voltage.
   ○Setting Range: OFF, 3.5v ～7.4v
   *The Battery Fail Safe Operation is a feature to activate Fail Safe Operation when the receiver battery voltage belows to the set voltage on a Nitro car.
   Don't use the Battery Fail Safe feature on electric RC cars.

   F/S Setting
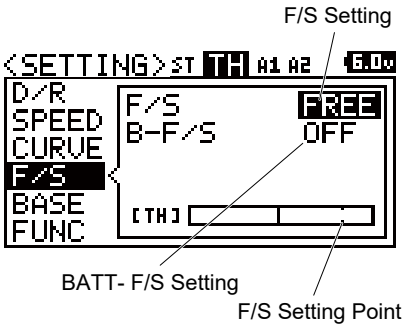

5) Checking the Fail Safe Operation
   Turn off the power of the transmitter while the Fail Safe Operation is set and check if the servo moves to the position where the Fail Safe Operation is set.

   BATT- F/S Setting
   F/S Setting Point

> **IMPORTANT**
> • About the Fail Safe Operation
>   When the Fail Safe feature is on, check the setting of the Fail Safe before operating.
>   Don't change the setting of the Fail Safe during operation.

BASE　　　SETTING

● Base sets multiple functions all at once such as the Reverse that determines the direction of the servo of each channel, the speed controller according to a specific RC car, the Sub Trim that adjusts the neutral position, and the End Point Adjustment [EPA].

REVERSE [REV]

● This is used when operation and the movement of the servo are reversed while operating Steering/throttle/AUX1/AUX2.

1) Select BASE with up and down key
   Select a channel to set (ST/TH/A1/A2).

2) Enter with the channel to be set by using up and down key.
   The Reverse setting will be changed.
   *When cancelling a selected feature, use the back key.
   ○Setting Range: NOR/REV
   ○Default: NOR

   REV Setting
SUB TRIM [SUB-T]

● Using the Sub Trim feature, correct the neutral (center) of Steering/Throttle/A1/A2 so that Trim can be used from the center position. When installing a servo on to an RC car, center the servo with Sub Trim first before adjusting End Point Adjustment.

1) Before using, center (0) each main trim.

2) Select SUB-T with up and down key
   Select a channel (ST/TH/A1/A2) to adjust Sub Trim.

3) Set the channel by Enter key.

4) Install the servo horn (servo saver horn) as close to centered as possible.
   *For installation position of the servo horn, follow a car product instruction.

   Setting SUB-T

5) Adjust the center by using up and down key.
   ○Setting Range:L150～R150(ST)
   　　　　　　　H150～B150(TH)
   　　　　　　　H150～L150(AUX1, AUX2)
   ○Default: 0

   TRIM 1 (TRM 1)
   TRIM 2 (TRM 2)
   Adjusting the center position
> ⚠ **Note**
> When installing the servo horn onto your servo, fix the servo horn as close to the center as possible and center it with Sub Trim.
> If Sub Trim and the transmitter main trim are off to one side, it causes dead band (the range the servo does not move) to the steering wheel and the throttle trigger.

●About Trim and Sub Trim

Trim is a feature for adjusting the neutral (center) position of the servo. When your model does not run straight after installing the steering servo onto the model, Trim adjusts the main trim of the steering. Also, the neutral position of the carburetor on RC cars needs neutral adjustment of the throttle servo along with linkage adjustment after installing the servo. Neutral position adjustment is necessary not only after installing the servo but for changes that happen during running such as tire wears and chassis twist. MT-R Trim features two types of Trim including Center Trim that adjusts only the neutral position without changing the end of the operating angle and Parallel Trim that moves the end of the operating angle and the neutral position simultaneously. Sub Trim that adjusts the neutral (center) position before fixing the servo horn is Parallel Trim and the main trim is Center Trim.

○Center Trim (Main Trim)
Even if you move the neutral position with Trim, the end of the operation angle does not move.

○Parallel Trim (Sub Trim)
When you move the neutral position with Trim, the end of the operation angle also moves.When Sub Trim is adjusted after linkage is completed, readjustment of End Point Adjustment (EPA) will be necessary.

How to Use Each Feature

BASE	SETTING

● Base sets multiple functions all at once such as the Reverse that determines the direction of the servo of each channel, the speed controller according to a specific RC car, the Sub Trim that adjusts the neutral position, and the End Point Adjustment [EPA].

END POINT ADJUSTMENT [EPA]

● EPA setting can adjust left and right steering servo range for steering operation, high and brake throttle working range for throttle trigger operation, and the servo working range for AUX1, AUX2 (3ch, 4ch).

[ST-EPA]　STEERING END POINT ADJUSTMENT

● Due to linkage, suspension balance and the difference of the tire diameter, left and right cornering radius can be different. In case of this, this feature adjusts the servo working range of left and right so that left and right cornering radius can be the same.

1) Before adjusting Steering End Point Adjustment (ST-EPA), make a neutral adjustment of the servo (P.22). Neutral adjustment is to align the center position with Sub Trim by turning the power on and installing the servo horn in the approximate center position.

2) Select either of [EPA-L/EPA-R] with up and down key Determine with the Enter.

3) Adjust the working range with up and down key. *When the cursor is on either of EPA-L/EPA-R, it is also possible to move the cursor by steering operation.

　○Setting Range:L/R 0%～150%
　○Default: L/R 100%
```
<SETTING> ST TH A1 A2   G.Ow
D/R    |REV        NOR
SPEED  |SUB-T        0
CURVE  |EPA-L      100%
F/S    |EPA-R      100%
BASE   |
FUNC   |
```

*Make sure the servos do not lock to make clicking sound

⚠ **Note** • If the linkage is locked for a long period, it can cause the servo breakage.

[TH-EPA]　THROTTLE END POINT ADJUSTMENT

● It adjusts the High Point of FET Speed Controller, Brake Point, carburetor of engine and the brake working range.

1) For a nitro car, make a neutral adjustment of the servo (P.20) before adjusting the Throttle End Point Adjustment (TH-EPA). Neutral adjustment is to align the center position with Sub Trim by turning the power on and installing the servo horn in the approximate center position.

2) Select [TH/Throttle] with up and down key.

3) Select either of [EPA-H/EPA-B] with up and down key. Determine with the Enter.

4) Adjust the operating quantity with up and down key. When adjusting ESC / FET Speed Controller, normally set both the high side and the brake side to 100% and set neutral, high point and brake point on the ESC / FET Speed Controller side (Setting method is different depending on the ESC / FET Speed Controller). *When the cursor is on either of EPA-H/EPA-B, it is also possible to move the cursor by trigger operation.

　○Setting Range:H/B 0%～150%
　○Default: H/B100%

```
<SETTING> ST TH A1 A2   G.Ow
D/R    |REV        NOR
SPEED  |SUB-T     H100
CURVE  |EPA-H     100%
F/S    |EPA-B     100%
BASE   |
FUNC   |
```

*Make sure the servos do not lock to make clicking sound
⚠ **Note** • When EPA setting value is too large on the fully open side of the carburetor and the brake side for throttle linkage, the servo is locked and it can cause the motor malfunction and runaway.

[AUX1-EPA]　AUX1・END POINT ADJUSTMENT

● You can use AUX1 for functions of accessories and adjust the maximum steering angle with EPA. Since you can set H/L separately, precise adjustment is possible. *When setting AUX1 to [CODE5/CODE10] in AUX TYPE, the operation will not be refected even by adjusting EPA.

1) Before adjusting AUX1 End Point Adjustment (A1-EPA), make a neutral adjustment of the servo (P. 22). Neutral adjustment is to align the center position with SubTrim by turning the power on and installing the servo horn in the approximate center position.

2) Select [AUX1] with up and down key.

3) Select either of [EPA-H/EPA-L] with up and down key. Determine with the Enter.

4) Adjust the working range with up and down key.

　○Setting Range:H/L 0%～150%
　○Default: H/L100%

```
<SETTING> ST TH A1 A2   G.Ow
D/R    |REV        NOR
SPEED  |SUB-T        0
CURVE  |EPA-H      100%
F/S    |EPA-L      100%
BASE   |[A1]
FUNC   |
```

[AUX2-EPA]　AUX2・END POINT ADJUSTMENT

● You can use AUX2 for functions of accessories and adjust the maximum steering angle with EPA. Since you can set H/L separately, precise adjustment is possible. *When setting AUX2 to [CODE5/CODE10] in AUX TYPE, the operation will not be reflected even by adjusting EPA.

1) Before adjusting AUX2 End Point Adjustment (AUX2-EPA), make a neutral adjustment of the servo (P. 22). Neutral adjustment is to align the center position with Sub Trim by turning the power on and installing the servo horn in the approximate center position.

2) Select [AUX2] with up and down key.

4) Select either of [EPA-H/EPA-L] with up and down key. Determine with the Enter.

3) Adjust the working range with up and down key.

　○Setting Range:H/L 0%～150%
　○Default: H/L100%

```
<SETTING> ST TH A1 A2   G.Ow
D/R    |REV        NOR
SPEED  |SUB-T        0
CURVE  |EPA-H      100%
F/S    |EPA-L      100%
BASE   |
FUNC   |
```

How to Use Each Feature

FUNCTION [FUNC] — SETTING

● Function can set trim, ALB (Anti-Lock Brake), OFFSET, and TH TYPE (Throttle Type) on each channel.
TRIM

● Correct neutral (center) of each channel (ST/TH/A1/A2) with Trim.
● As default, steering is set for Trim 1 (TRM1), and throttle for Trim 2 (TRM2).

1) Select a channel (ST/TH/AUX1/AUX2) for adjusting Trim with up and down key.

2) Determine with Enter operation and adjust with up and down key.

○ Setting Range:
ST:L100～R100
TH:H100～B100
AUX1:H100～L100
AUX2:H100～L100

○ Default:
ALL : 0

*Make an adjustment with TRM1 (ST) and TRM2 (TH) during operation. You can change the Trim lever position with the Key Assignments Trim feature (P. 46).

```
<SETTING> ST TH A1 A2   6.0v
D/R
SPEED    TRIM          0
CURVE
F/S
BASE     [ST]
FUNC
```

TRIM 1 (TRM 1)

TRIM 2 (TRM 2)

IMPORTANT
• About Trim
Trim is a feature to adjust the neutral (center) position of the servos. After installing the steering servo onto a car, you can adjust with Trim when the car does not move straightly. Neutral position adjustment is necessary not only after installing the servo but for changes that happen during running such as tire wears and chassis twist.
• It's Sub Trim that adjusts het center position when adjusting linkage (P. 22)

Note ⚠
• If Trim and Sub Trim are off to one side, it causes dead band (the range the servo does not move) to the steering wheel and the throttle trigger. When installing the servo horn, fix the servo horn as close to the center as possible and center it with Sub Trim.
ANTI-LOCK BRAKE [ALB]

● Anti-Lock Brake enables stable braking on a low grip road.
● Because of the stable braking, you can drive ideal cornering lines as intended.

1) Select [ALB] with up and down key.

2) The menu changes to ALB setup menu with the enter operation.

3) Setting Stroke (STROKE)
Set Stroke of ALB with up and down key. Stroke is the width of repeated actions at the time of braking.
○Setting Range:OFF, 0%～100%
○Default:OFF   *ALB does not work when it is off.

4) Setting Point (POINT)
Set Point of ALB with up and down key. Point is the position where ALB starts acting when operating the brake.
○Setting Range: 5%～100%
○Default: 80%

5) Setting Lag (LAG)
Set Lag of ALB with up and down key. Lag is a setting of time lag from the time when operating to the point to the time when ALB starts acting.
○Setting Range: 0.00s～1.00s
○Default: 0.00s

6) Setting Cycle (CYCLE)
Set a cycle of ALB with up and down key. Cycle is a frequency setting of repeated actions for braking.
○Setting Range: 0.01s～1.00s
○Default: 0.03s

*While Anti-Lock Brake working, transmitter LED will be high-speed flashing.

*LED flashing time and way of flashing are same in any setting values.

```

Position of the Point
Neutral

*ALB is activated when operating from the point position to full brake.

SUPPLEMENT ⚠
• Activate the brake rather strongly not to the extent that the tires of your RC car lose their grips (not to slip) and adjust so that Anti-Lock Brake is activated just before the tires are locked and slide.
• If you set ALB using a speed controller with a back on an RC car, you may not able to operate back movement. When using a back movement, turn ALB off.

How to Use Each Feature

FUNCTION [FUNC]   SETTING

● Function can set trim, ALB (Anti-Lock Brake), OFFSET, and TH TYPE (Throttle Type) on each channel.

OFF SET

● By moving the position of the throttle neutral at the time of starting a nitro RC car engine, it improves the start-up performance of the engine.
● You can fix at a position where idling speed is increased so that the engine will not stop during refueling your nitro RC car.
● By operating the switch that has been set, you can stop the engine of your RC boat.
● You can use various power sources with Offset feature.
● ON/OFF of the Offset can be assigned to the switch.

1) Select [OFFSET] with up and down key.

2) Determine with enter operation.
It will change to OFFSET Setting menu.

3) Setting Offset [OFFSET]
Set ON/OFF of the Offset feature with up and down key.
○ Setting Range: ON/OFF
○ Default: OFF

4) Setting Position [POSI]
Set Position of the Offset with up and down key.
○ Setting Range: H100%～B100%
○ Default: 0%
THROTTLE TYPE [TH TYPE]

● You can move the neutrals position of the throttle and set the operating ratio of the forward side and the brake (backward) side to either 7:3 or 5:5.
*Set the throttle type according to the speed controller to be used.

1) Select [TH TYPE] with up and down key.

2) Determine with enter operation.
It will change to TH TYPE Setting menu.

3) Setting the Throttle Type
Set the Throttle Type with up and down key.
○ Setting Range: F7:B3 / F5:B5
○ Default: F7:B3

*When changing TH TYPE, the screen changes to the confirmation screen and a message is displayed. Operate following the message.
• NO →Cancel to Change Throttle Type
• YES →Confirm to Change Throttle Type

How to Use Each Feature

AUX

● AUX menu sets the performance of AUX1 and AUX2 (3ch, 4ch). You can choose from STEP AUX (STEP), POINT AUX (POINT), 4WS (4-Wheel Steering: Coordinate Phase, Opposite Phase). MOA (Motor On Axle), AUX-MIX (AUX Mixing: ST → AUX/TH-AUX) and CODE-AUX.

STEP AUX

● Setting Step AUX allows you to set the operating quantity by operating assigned Trim or a switch.
● By factory default, the AUX feature is set to the Step AUX.

1) Select [AUX] with up and down key.

2) Determine with enter operation.
   It will change to CH Setting menu.

3) Setting Step AUX (STEP AUX)
   Determine [CH] to activate with the enter.
   Set the position of the motion with up and down key.

   *Operating range also can be set by
   EPA (End Point Adjustment, P.24).

○ Setting Range: H100% 〜L100%
○ Default: 0%

4) Mode Setting (MODE)
   Determine with enter, and set working step values
   to the used method.

○ Setting Range: 1/2/5/10/20/25/50/100
○ Default: 5

   SET can be AUX TYPE and MODE setting and
   shortcut of the key assign function.
   *Assign the features to Trim and switch with
   Key Assignments according to the used method.

How to Use Each Feature

AUX | AUX

● AUX menu sets the performance of AUX1 and AUX2 (3ch, 4ch). You can choose from STEP AUX (STEP), POINT AUX (POINT), 4WS (4-Wheel Steering: Coordinate Phase, Opposite Phase). MOA (Motor On Axle), AUX-MIX (AUX Mixing: ST → AUX/TH-AUX) and CODE-AUX.

AUX MIXING [AUX MIX]

● Setting AUX Mixing allows you to mix from the steering to AUX and from the throttle to AUX.

1) Select [AUX] with enter.

2) Change [SET] menu with enter.
   *Switch CH to SET with up and down key.
3) TYPE setting (AUX-MIX)
   Select [AUX-MIX] on AUX TYPE setting with up and down key.
4) MODE Setting
   Set mixing mode to the used method.

○Setting Range: ST-mix / TH-mix
○Default: ST-mix
   *ST-mix is mixed from the steering to AUX.
   TH-mix is mixed from the throttle to AUX.

5) Mixing rate setting
   Set mixing rate with up and down key.

○Setting Range: 0%〜100%
○Default: 100%

   *Assign the features of the Mixing Rate to Trim or the switch
   with Key Assignments, or operate with up and down key.

CODE AUX

● Code AUX (CODE AUX) is a feature to perform code communication by assigning a setting value to each code of CODE1-CODE10.
   It is an extension feature to change the setting of speed controller (SUPER VORTEX series/ SV-D2), PGS servo series, and the Gyro System (SGS-01C/SGS01D/SGS-02) that are compatible to CODE AUX.
● You can set 2 types of Code AUX1 and CODE AUX2.
   *Please set response mode [SHR] on A1 and A2 when binding with a receiver. (p.43).
   *In case of using CODE AUX, please do NOT conect servos on receiver CH3 and CH4 port.

1) Select [AUX] with up and down key.

2) Change [SET] setting menu with enter.
   *Switch CH to SET with up and down key.

3) Type Setting (CODE AUX)
   Select [CODE] on AUX TYPE setting with up and down key.
   *CODE is only compatible with CODE10 products.
   *MT-R is not compatible with CODE5 products such as SV-ZERO, SV-SPORT, SV-TYPE D, SGS-01, and SGS-01D.

4) Mode setting
   Display function name for CODE10 products by setting mode for compatible product.

   ○Setting Range: CODE/SV-G/D(only AUX1)
                   CODE/PGS/SGS-02 (only AUX2)
   ○Default: CODE

5) CODE AUX setting
   Select CODE with enter you want.
   Set value with up and down key.

*In case of setting CODE on AUX TYPE, CODE AUX
setting condition will display on top screen as below pictures.

How to Use Each Feature

MODEL MENU — MODEL

● You can set the features about Model Select, Model Name, Model Copy and Model Clear.
● Installed with high capacity EEPROM and it can memorize data for 20 models of M01 ~ M20.

MODEL SELECT

● You can call model data of memorized M01 ~ M20 easily.

1) Select [MODEL] with up and down key.
   Determine with enter.

2) Setting Model Select (MODEL SELECT)
   Select [MODEL SELECT] with up and down key.
   Determine with enter.

3) Selecting Model
   Select Model to call with up and down key.

○ Setting Range: M01 ～M20

4) When moving the cursor to the model to call
   and Enter is being operated, a message
   is displayed on the screen.
   Follow the display to operate and select a model.

Yes: Change Model and Back to 2.

SUPPLEMENT

MT-R has a feature of Direct Model Select. When turning the power switch of the transmitter on while pressing the Back/Cancel button, it starts from the MODEL SELECT screen so that you can easily call a model to use.

MODEL NAME

● You can register a model name with up to 10 characters of alphabets, numbers, symbols, and Japanese Katakana for each model.

1) Select [MODEL] with up and down key.
   Determine with the Enter operation.

2) Setting Model Name [MODEL NAME]
   Select [MODEL NAME] with up and down key.
   Determine with the Enter operation.

3) Setting Model Name
   Move the cursor "_____" with up and down key
   to the position to input texts. Once the position
   is determined, press the Enter key to determine
   the cursor position.
   "_____" is flashing when moving,
   and is turning on when determied.

4) Select texts to enter with up and down key. Once the
   texts to enter are determined, enter with the Enter key.

   *When changing texts are already entered or
   when moving the cursor of the text input position,
   press the Back button to cancel the action.

○ Setting Range: A～Z,a～z,0～9,Symbols, Space,
                 Japanese Katakana, Little Katakana.

5) Repeat 3) and 4), and enter texts.

How to Use Each Feature
SYSTEM MENU — SYSTEM

● A feature for setting system of the transmitter, such as Bind, Key Assignments (KEY ASSIGN),Buzzer, Battery, LCD and CALIBRATION.
BIND

● Select the output system that suits the receiver, set a mode for the servo (analog/digital) and the speed controller to be used and bind the transmitter with the receiver.
When using first time, please bind with receiver.
*MT-R does not bind with RX-493i of the factory.

1) Select [SYSTEM] with the up and down key.
Determine with the Enter operation.

2) Select [BIND] with up and down.
Determine with the Enter operation.

3) Setting RF MODE (Signal output system)
○ Output System
・FH5
 RX-491,RX-492, RX-493, RX-493i
*FH4, FH3, FH-E, DS mode receivers are not compatible.

4)Setting Channel Mode
Set the response mode for each channel with up and down key.
・You can the set the response mode for each channel.

○ Setting Range: NOR(Normal)
SHR(High Response)
SSR(Super Response)
SUR (Ultra Response)
○ Default: NOR

Response Mode

IMPORTANT

・Note that, in SHR/SSR/SUR mode, an analog servo will not work. If you mistakenly use an analog servo in SHR/SSR/SUR mode, it will not operate normally and the servo will be broken.
 Do not use an analog servo in SHR/SSR/SUR mode.
 For digital servo (SRG, ERB ERS series, Digital ERG series), it can work for either mode of NOR/SHR.
・SSR mode works only for PGS ,SRG servo, SUPER VORTEX series, HV-12 STOCK SPECIAL and HV-01.
・SUR mode works for only PGS servo, SUPER VORTEX Gen2 / PRO / SV-D2.
・In SHR/SSR mode, BL/RACER, BL/FORCE, F2000, F2200, F3000, F3300, SBL-01, 02 and 03CL do not work.
・BL-SIGMA, SV-08, HV-10, HV-12 and F2500 work in NOR/SHR mode.

---

7) Setting BIND
● What is BIND: Each of MT-R transmitters has its own unique ID (solid identification) number. BIND is to let the receiver memorize the ID number. Operation will be possible only between the transmitter and the receiver that completed Binding.

1] When setting in the BIND menu is done, set BIND with up, down, and enter key.
2] Move the cursor to [ENTER] in the BIND menu and operate Enter.
The transmitter now is ready for BIND operation.

Push
ENTER

3] Turn on the receiver with inserting Bind Plug in BIND/SSL port.

BIND plug
Connect BIND plug to receiver
Switch ON
Switch ON the power supply of receiver/ FET speed controller.

Note) Though the wire is not connected to the above-mentioned receiver, keep the servo and FET speed controller (excluding motor), battery in connected state.
4] When BINDING is done properly, the LED of the receiver starts flashing slowly at first then it flashes in high speed.
When the LED of the receiver flashes in high speed, operate the Enter key of the transmitter to complete BINDING.
Then, please take off the Bind Plug from the receiver.
When BINDING is done properly, the LED of the receiver is lit.
When the LED of the receiver is lit, please check the bind completion by using servo operation.

*When BINDING cannot be done properly, restart from step 2).

BIND Plug

Take off Bind Plug from the receiver

BINDING Complete (Light on)
⚠ **Note**
・ BINDING is not done at the factory. Please make sure to complete BINDING before use.
・ When the receiver is new, make sure to complete BINDING for the transmitter and the new receiver.
・ Make sure to use the set of the transmitter and the receiver that completed BINDING.
・ When changing the setting in the BIND menu after BINDING, repeat BINDING.
・ When changing the setting of the mode (NOR/SHR/SSR/SUR) after BINDING, repeat BINDING. If you do not re-BIND, setting changes will not be reflected.

How to Use Each Feature

SYSTEM MENU ▸ SYSTEM
● A feature for setting system of the transmitter, such as Bind, Key Assignments (KEY ASSIGN),Buzzer, Battery, LCD and CALIBRATION.

Switch and Trim position

TRIM 1 (TRM 1)
TRIM 2 (TRM 2)
SWITCH 3 (SW 3)
SWITCH 2 (SW 2)
TRIM 3 (TRM 3)
SWITCH 1 (SW 1)

Features assigned to the Switch and Trim at the factory
TR1: Steering Trim(TRM-ST)
TR2: Throttle Trim(TRM-TH)
TR3: Dual Rate ST(D/R-ST)
SW1: TIMER
SW2: AUX1
SW3: AUX2

KEY ASSIGN SWITCH

● You can assign features to the switches (SW1, SW2, SW3) of the transmitter and toggle ON/OFF of the features during operation.

1) Select [SYSTEM] with up and down key.
   Determine with the Enter operation.
2) Select [KEY ASSIGN] with up and down key.
   Determine with the Enter operation.
3) Setting the Switch (SW1/SW2/SW3)
   Operate the Enter with [SW] and set the feature
   to assign to the switch with up and down key.
○ Setting Range:

Switch	Assignable Futures
SW1	OFF, ASIST-ST, D/R-ST, D/R-TH, D/R-BR, CUR-ST, CUR-TH, SPD-ST, SPD-TH, ALB, OFFSET, AUX1, AUX2, TIMER, TE-CLR, LOGGER

Switch	Assignable Futures
SW2	OFF, ASIST-ST, D/R-ST, D/R-TH, D/R-BR, CUR-ST, CUR-TH, SPD-ST, SPD-TH, ALB, OFFSET, AUX1, AUX2

Switch	Assignable Futures
SW3	OFF, D/R-ST, D/R-TH, D/R-BR, CU-R-ST, CU-R-TH, CU-R-BR, SP-ST-F, SP-ST-R, SP-TH-F, SP-TH-R, ALB-ST, ALB-LG, ALB-CY, OFFSET, AUX1(CD1~10), AUX2(CD1~10)

○ Default : SW1: TIMER   SW2: OFF   SW3: OFF
*BY Setting [ASSIST-ST] onto SW1 and SW2,
you can turn ON/OFF the feature of D/R, SPEED and CURVE
that can be set onto the steering.

4) Setting Mode
   It sets the switch performance but there are casesthat
   you cannot set depending on the feature to assign.
   ○ Setting Range
   TOGGLE (Switching between ON/OFF when pressed every time)
   PUSH (ON is worked when switch is only pressed)

KEY ASSIGN TRIM

● You can change the setting value of each feature with Trim1 - Trim3.
● You can also change the setting of the variation change in one time of Trim operation with the STEP setting and the direction of the action with the REV setting.

1) Select [SYSTEM] with up and down key.
   Determine with the Enter operation.

2) Select [KEY ASSIGN] with up and down key.
   Determine with the Enter operation.

3) Setting Trim (TRM1/TRM2/TRM3)
   Select [TRIM] with enter. Change the setting
   and set a feature to assign with up and down key.
○ Setting Range:

>KEY ASSIGN SW TRM
[KEY][FUNCTION]　　[STEP][REV]
TR1: TRM-ST　　　　5　NOR
TR2: TRM-TH　　　　5　NOR
TR3: D/R-ST　　　　1　NOR

Switch	Assignable Futures
TRIM1 TRIM2 TRIM3	OFF, TRIM-ST, TRM-TH, TRIM-A1, TRIM-A2, D/R-ST, D/R-TH, D/R-BR, CU-R-ST, CU-R-TH, CU-R-BR, SP-ST-F, SP-ST-R, SP-TH-F, SP-TH-R, ALB-PO, ALB-ST, ALB-LG, ALB-CY, OFFSET, AUX1(CD1~10), AUX2(CD1~10)

○ Default:　　　TR1:TRM-ST
　　　　　　　　TR2:TRM-TH
　　　　　　　　TR3:D/R-ST

4) Setting Step
   Set the variation of the movement by one-time Trim operation.
   Select [STEP] with up and down key. Determine with the Enter operation and set the variation.
   ○ Setting Range: 1~100
   ○ Default:　　　5

5) Setting the Direction of Action
   Set the direction of action when operating Trim. Select [REV] with up and down key.
   Determine with the Enter operation and set the direction of action.

   ○ Setting Range: NOR/REV
   ○ Default:　　　NOR

How to Use Each Feature

SYSTEM MENU	SYSTEM

BUZZER

● You can set operating sounds of key operation, Trim and Switch and the buzzer tones.
● You can set 5 steps of the volume and 7 types of tones.

1) Select [SYSTEM] with up and down key.
   Determine with the Enter operation.

2) Select [BUZZER] with up and down key.
   Determine with the Enter operation.

3) Setting Tone and Volume
   You can switch between Tone (scales) and Volume (Sound Volume)
   with up and down key. Select an item to change setting to adjust.
○ Setting Range: VOLUME OFF~5
                 TONE 1~7

○ Default: VOLUME 4
           TONE 1

BATTERY

● You can change the voltage setting of the battery alarm of the transmitter.
● By selecting Type [DRYx4 (Batteries)/Ni-MH x4 (Nickel Metal Hydride)/Li-Fe x2 (Lithium Ferrite) /Li-Po x2
   (Lithium Polymer),CUSTOM], you can set the alarm easily.
   *When selecting CUSTOM with the Type, you can set ALERT VOLT that sets voltage to make Alarm go off
   and LIMIT VOLT of the lower limite voltage.

1) Select [SYSTEM] with up and down key.
   Determine with the Enter operation.

2) Select [BATTERY] with up and down key.
   Determine with the Enter operation.

3) Setting TYPE
   Set TYPE for the battery to be used with up and down key.

○ Setting Range: DRY x4 (AA x4)
                 Ni-MH x2 (Nickel Metal Hydride)
                 Li-Po x2 (Lithium Polymer)
                 Li-Fe x2 (Lithium Ferrite)
                 CUSTOM: ALERT VOLT:4.1 ~ 9.0v
                       : LIMIT VOLT:4.0 ~ 9.0v

```

CALIBRATION

● Due to wearing and tearing of the internal mechanical elements over the usage time, the neutral position
   and the operation angle might become off. In such case, you can correct the neutral positions and the
   operation angle of the steering and the throttle.

1) Select [SYSTEM] with up and down key.
   Determine with the Enter operation.

2) Select [CALIBRATION] with up and down key.
   Determine with the Enter operation.

3) Select a channel to calibrate with up and down key.
   Determine with the Enter operation.

4) When selecting [STEERING], operate the Enter with
   the steering wheel in neutral, then operate
   the steering wheel fully to left and right.

5) When entering the range, [OK] is displayed.
   Operate following the display.

6) When calibration is done, [Executed] is displayed.

   *If the throttle side also needs calibration, refer to the steering to set.

```
<SYSTEM>              6.0v
·BIND
·KEY ASSIGN
·BUZZER

IMPORTANT

• Please note that the analog servos do not work in SHR/SSR/SUR modes. If you mistakenly use the analog servos in SHR/SSR/SUR mdoes, it does not work normally and the servos will be broken. Never use analog servos in SHR/SSR/SUR modes. For digital servos (SRG, ERB, ERS Series and Digital ERG Series), either NOR or SHR mode works.
• SSR mode works only for PGS, SRG Servos, SUPER VORTEX/SV-PLUS series, HV-12, STOCK SPECIAL and HV-01.
• SUR mode works only for PGS servo, SUPER VORTEX Gen2 / PRO / SV-D2.
• With SHR/SSR/SUR mode, BL-RACER, BL-FORCE, F2000, F2200. F3000 F3300, SBL-01 02 and 03CL do not work. Make sure to use them in NOR mode.
• BL-SIGMA, SV-08, HV-10, HV-12 and F2500 work in NOR/SHR modes.
• Please read user manual of using speed controller.

How to Use Each Feature

ABOUT QUICK SETUP WIZARD

●Quick Setup Wizard function is easily to set up when you set up new RC car.
●Setup Wizard is fllowing start menu→model select→type select→model initialize→RF mode select→response mode select→bind→base setting.

① EP CAR STANDARD
For Standard Electric RC Car Setting

1CH : ST (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : ESC (Speed Controller)	SW2 : OFF	TR2 : TRM-TH
3CH : AUX1	SW3 : OFF	TR3 : D/R-ST
4CH : AUX2		

② EP CAR DRIFT
For Drift Car Setting
Pushing TRM3 can change AUX(3CH) setting.
*Connected Gyro in receiver 3CH can be set.

1CH : ST (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : ESC (Speed Controller)	SW2 : OFF	TR2 : TRM-TH
3CH : AUX1	SW3 : OFF	TR3 : AUX1
4CH : AUX2		

③ EP CAR (PGS)
For Electric Car setting with PGS servo series for steering.
Connected PGS servo to receiver SSL port can be set by AUX CODE 10 in AUX menu.

1CH : ST (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : ESC (Speed Controller)	SW2 : OFF	TR2 : TRM-TH
3CH : AUX1	SW3 : OFF	TR3 : D/R-ST
4CH : CODE (PGS)		

④ EP CAR (SV-G2P)
For Electric Car setting with PGS servo series for steering and SUPER VORTEX Gen2, Gen2 PRO, and SV-D2 for throttle.
Connected PGS servo and the speed controller to receiver SSL port can be set by AUX CODE 10 in AUX menu.

1CH : ST (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : ESC (Speed Controller)	SW2 : OFF	TR2 : TRM-TH
3CH : CODE (SV-G/D)	SW3 : OFF	TR3 : D/R-ST
4CH : CODE (PGS)		

⑤ EP CAR (SV-D2)
For Drift Car setting with SUPER VOLTEX Gen2, Gen2 PRO, SV-D2 and SGS-02 for Gyro.
Connected the speed controller and gyro to receiver SSL port can be set by AUX CODE 10 in AUX menu.

⑥ GP CAR STANDARD
For Standard Nitro Car setting
Assigned to turn on and off OFFSET function to SW2.
In case of using PGS servo series for steering and throttle, connected the PGS servo to receiver SSL port can be set by AUX CODE 10 which can set device by transmitter.

1CH : ST (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : TH/BR (Throttle/Brake)	SW2 : OFFSET	TR2 : TRM-TH
3CH : AUX1	SW3 : OFF	TR3 : D/R-ST
4CH : CODE (PGS)		

⑦ 1/5GP DUAL -BR1
1CH & 3CH for steering, and 2CH & 4CH for throttle and brake setting
Assigned 2CH brake servo working can be set by TRM2.
Assigned 4CH brake servo working can be set by TRM3.

1CH : ST1 (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : TH/BR (Throttle/Brake)	SW2 : OFFSET	TR2 : D/R-BR
3CH : ST2 (Steering）	SW3 : OFF	TR3 : AUX2
4CH : BR (Brake)		

⑧ 1/5GP DUAL-BR2
1CH for steering, 2CH for throttle, and 3CH＆4CH for brake setting
Assigned 3CH brake servo working can be set by TRM2.
Assigned 4CH brake servo working can be set by TRM3.
2CH / 3CH brake servo mixing rate can be set by AUX menu.
2CH / 4CH throttle and brake mixing rate can be also set by AUX menu.

1CH : ST1 (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : TH (Throttle)	SW2 : OFFSET	TR2 : AUX1
3CH : BR1 (Brake)	SW3 : OFF	TR3 : AUX2
4CH : BR2 (Brake)		

⑨ CRAWLER 4WS/MOA
1CH＆3CH for steering, and 2CH＆4CH for speed controller setting
4WS mode can be changed by TRM3. [F-ST]⇔[REV]⇔[NOR]⇔[R-ST]
MOA-RATE can be changed by TRM2. [F100:R0]⇔[F100:R100]⇔[F0:R100]
Detailed MOA setting and 4WS setting can be changed by AUX menu.

1CH : ST1 (Steering）	SW1 : TIMER	TR1 : TRM-ST
2CH : ESC1(Speed Controller)	SW2 : OFF	TR2 : AUX2
3CH : ST2 (Steering)	SW3 : OFF	TR3 : AUX1
4CH : ESC2 (Speed Controller)		

Assign Function List

Transmitter LED Indication List

LED Condition	Working Condition
Light on	Normal Operation (While Transmitter Output)
High-speed Flashing	ALB Working
Medium-speed Flashing	Battery Alarm Working
Flashing	Logger Working
Twice Flashing	OFFSET Working
	Telemetry Working
	POWER ON Alarm Working
High-speed Flashing	Battery (LIMIT) Alarm Working
	Over Voltage Alarm Working
Low-speed Flashing	BIND Command Sending

INDEX

When this happens

Symptom	Cause	Measure
There is no power.	Batteries are consumed. Batteries are placed improperly.	Replace with new batteries or recharged batteries. Reinstall the batteries as the polarity is indicated.
Power is cut off occasionally.	Bad connection of connectors.	Bring to Sanwa Service
Insufficient length	Batteries are consumed.	Replace with new batteries or recharged batteries. If the problem cannot be solved, please contact Sanwa Service
Alarm does not stop.	Battery voltage of the transmitter is drained.	Replace with new batteries or recharged batteries.
There is no click sound when pressing the key.	Volume of the BUZZER feature is OFF (0).	Check BUZZER feature (P.47).
The servo speed is slow.	SPEED feature is set to minus.	Check SPEED feature (P.19).
	Battery voltage of the receiver is decreasing.	Replace with new batteries or recharged batteries.
	Linkage of the car body side is heavy.	Check if the Linkage of the car body side moves lightly.
Steering angles of left and right are different even when they are aligned.	Trim neutral is not aligned.	Align Trim and reset EPA. (P.23, 25)
When operating, the servos will not work on both ends	Steering angle settings of D/R and EPA are too large.	Set either value to below 100%. (P. 18, 23, 24)
Servo did not work even if pushing trim	Trim working range is maximized on one side.	Please reset servo horn and trim center. (P.22)

Service and Support

This is warranted against manufacturer defects in materials and workmanship, at the original data of purchase. This warranty does not cover components worn by use or damage caused by improper voltage, tempering, modification, misuse, abuse, improper writing, reverse polarity, moisture or using outside its intended scope of use.

Terms of this warranty can vary by region. Please read the warranty card included with your radio control system for specific warranty information.

If you have any questions or concerns, we're here to help. If you encounter a problem with your radio control system, first chek the Troubleshooting Guide on Page 56.

If you require further help that cannot be solved using The Troubleshooting Guide, or if you have technical questions, please contact SANWA service center in your region.

For a complete list of distributors in your rgion, please visit www.sanwa-denshi.com/rc/distributors.html.

For Service In North America:	Factory Service:
Serpent America	Sanwa Electronic Instrument CO., LTD.
5121 NW 79 Ave. Unit 03,	1-2-50 Yoshita-Honmachi
Doral, Florida 33166 USA	Higashiosaka, Osaka, 578-0982 Japan
Telephone: (305)-677-3253	Telephone: 81-729-62-1277
Fax: (305)-675-0415	Fax: 81-729-64-2831
Email: info@serpentamerica.com	Email: rcintl@sanwa-denshi.co.jp

Product features and specifications can vary by region. Not all products are legal for use in all regions.

⚠ Please note that products purchased outside of North America cannot be serviced under warranty by Serpent America. In some cases, we can make repairs for products purchased outside of North America, however, applicable repair costs and shipping charges will be applicable. For warranty claims outside North America, please contact the service center in your region.

FCC COMPLIANCE STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the operating instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment OFF and ON, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and the receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1) This device may not cause harmful interference, and....
2) This device must accept any interference received, including interference that may cause undesired operation.

⚠ Changes or modifications made to this equipment not expressly approved by SANWA may void the FCC authorization to operate this equipment.

RF Exposure Statement:
This transmitter has been tested and meets the FCC RF exposure guidelines when used with the SANWA accessories supplied or designated for this product, and provided at least 20cm separation between the antenna the user's body is maintained. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.
