

No SAR Evaluation Required if power is below the following threshold:

| Tunable Range |             | Center of Tunable Band (GHz) | 60/f SAR Limitation (mW) |
|---------------|-------------|------------------------------|--------------------------|
| F(GHz) Low    | F(GHz) High |                              |                          |
| 2.402         | 2.480       | 2.441                        | 24.58                    |

Maximum measured transmitter power:

| Pout Conducted (dBm) | Pout Conducted (mW) | Maximum Antenna Gain (dBi) | Pout EIRP (mW) |
|----------------------|---------------------|----------------------------|----------------|
| 4.90                 | 3.09                | 2.00                       | 4.90           |

Threshold for no SAR evaluation is 24.58 mW

Maximum TX Power is 3.09 mW Conducted and 4.90 mW EIRP

Conclusion: No SAR evaluation required since maximum Transmitter Pout (both conducted and EIRP) is below FCC threshold
