

Principle: power input through F and VAR protective circuit and combine L1C1 into LC filter (The pane show 24W is combined with 4 levels. 28W is combined with 6 levels the others just 1 level ) to filtrate, then send to D1D2C2C3 filter. Direct volts supply Q1Q2 etc, transformer and cause high AC currents. At last the output circuit is made of C6C7L1L2L3L4 light of the tube.
