

## Shenzhen CTA Testing Technology Co., Ltd.

Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao'an District, Shenzhen, China

	FCC PART 22/24 TEST REPORT
	FCC Part 22 /Part 24
Report Reference No	
FCC ID	: 2BNR7-W90
Compiled by position+printed name+signature	<sup>a)</sup> File administrators Joan Wu
Supervised by position+printed name+signature	e): Project Engineer Zoey Cao
Approved by position+printed name+signature	e): RF Manager Eric Wang
Date of issue	: Feb. 13, 2025
	: Shenzhen CTA Testing Technology Co., Ltd.
Address	Room 106 Building 1 Vibaolai Industrial Park Oiaotou Community
Applicant's name	: Shenzhen Baijin Technology Co., Ltd
Address	C203-J2, Bldg C, No.19 Yinzhu Rd, Nanlian Comm, Longgang St, Longgang Dist, Shenzhen, China
Test specification	TES!

# 1 TEST STANDARDS

The tests were performed according to following standards: <u>FCC Part 2:</u> FREQUENCY ALLOCA-TIONS AND RADIO TREATY MAT-TERS; GENERAL RULES AND REG-ULATIONS

FCC Part 22 Subpart H: PRIVATE LAND MOBILE RADIO SERVICES.

FCC Part 24 Subpart E: PUBLIC MOBILE SERVICES

ANSI/TIA-603-E-2016: Land Mobile FM or PM Communications Equipment Measurement and Performance Standards.

ANSI C63.26-2015: IEEE/ANSI Standard for Compliance Testing of Transmitters Used in Licensed Radio Services

FCCKDB971168D01 Power Meas License Digital Systems

# 2 <u>SUMMARY</u>

# **2.1 General Remarks**

Date of receipt of test sample	:	Jan. 07, 2025	]
	2011	CTA L	
Testing commenced on		Jan. 07, 2025	TES
	40.	G	CIN
Testing concluded on	:	Feb. 13, 2025	

# 2.2 Product Description

l	: Feb. 13, 2025
2.2 Product Description	
Product Name:	TABLET COMPUTER
Model/Type reference:	W90
Power supply:	DC 3.85V From battery and DC 9.0V From external circuit
G C'	Model: KWY-PD20U
Adapter information:	Input: AC 100-240V 50/60Hz 0.5A
Aduptor mornation.	Output: DC 5V 3A, 9V 2.22A, 12V 1.67A
Hardware version:	L30-T616ES-V2.0
Software version:	V1.0
Testing sample ID:	CTA250107006-1# (Engineer sample) CTA250107006-2# (Normal sample)
Modilation Type	GMSK
Antenna Type	PIFA Antenna
GSM/EDGE/GPRS	Supported GSM/GPRS
GSM/GPRS Power Class	GSM850:Power Class 4/ PCS1900:Power Class 1
GSM/GPRS Operation Frequency	GSM850 :824.2MHz-848.8MHz/PCS1900:1850.2MHz-1909.8MHz
GPRS Operation Frequency Band	GPRS850/GPRS1900
GPRS Multislot Class	Multi-slot Class 12
Extreme temp. Tolerance	-30°C to +50°C
GPRS operation mode	Class B
Antenna Type:	PIFA antenna
Antenna Gain:	GSM850: -0.3 dBi,DCS1900: 1.3 dBi

#### **Equipment under Test** 2.3

## Power supply system utilised

2.3 Equipment under Test Power supply system utilised				
Power supply voltage	:	0	120V / 60 Hz	230V / 50Hz
		0	12 V DC	24 V DC
		•	Other (specified in blank below)	

#### DC 3.85V From battery and DC 9.0V From external circuit

## **Test frequency list**

(	Test Mode	TX/RX	RF Channel Low(L) Middle (M) High (H)			
		TX	Channel 128	Channel 190	Channel 251	
	GPRS 850		824.2 MHz	836.6 MHz 🕤	848.8 MHz	
	GFK3 000	RX	Channel 128	Channel 190	Channel 251	
	RA RA		869.2 MHz	881.6 MHz	893.8 MHz	
	Test Mode	TX/RX		RF Channel		
	Test Wode	ΙΛ/ΚΛ	Low(L)	Middle (M)	High (H)	
ATES						

Page 6 of 48

0000 4000	ТХ	Channel 512 1850.2 MHz	Channel 661 1880.0 MHz	Channel 810 1909.8 MHz
GPRS 1900	RX	Channel 512	Channel 661	Channel 810
TES	ΓΛ	1930.2 MHz	1960.0 MHz	1989.8 MHz

# CTA TESTING 2.4 Short description of the Equipment under Test (EUT)

This is a TABLET COMPUTER.

For more details, refer to the user's manual of the EUT.

## 2.5 EUT configuration

#### The following peripheral devices and interface cables were connected during the measurement:

- supplied by the manufacturer
- $\bigcirc$  supplied by the lab

<ul> <li>- supplied by the lab</li> <li>/</li> <li>M/N : /</li> <li>Manufacturer: /</li> </ul>	
Manufacturary /	

#### Related Submittal(s) / Grant (s) 2.6

This submittal(s) (test report) is filing to comply with FCC Part 22 and Part 24 Rules

#### Modifications 2.7

No modifications were implemented to meet testing criteria.

#### 2.8 **General Test Conditions/Configurations**

#### 2.8.1 Test Modes

NOTE: The test mode(s) are selected according to relevant radio technology specifications.

-6	Test Mode 1	GSM
TATES	Test Mode 2	GPRS
GV	TESTIN	

## 2.8.2 Test Environment

2.8.2 Test Environment		NG
Environment Parameter	Selected Val	ues During Tests
Relative Humidity	A	mbient
Temperature	TN	Ambient
	VL	3.40V
Voltage	VN	3.85V
	VH	4.20V

NOTE: VL=lower extreme test voltage VN=nominal voltage VH=upper extreme test voltage TN=normal temperature

# 2.9 Modifications

No modifications were implemented to meet testing criteria.

#### 3 TEST ENVIRONMENT

#### 3.1 Address of the test laboratory

## Shenzhen CTA Testing Technology Co., Ltd.

Room 106, Building 1, Yibaolai Industrial Park, Qiaotou Community, Fuhai Street, Bao'an District, Shenzhen, China

#### 3.2 **Test Facility**

The test facility is recognized, certified, or accredited by the following organizations:

#### FCC-Registration No.: 517856 Designation Number: CN1318

Shenzhen CTA Testing Technology Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

#### A2LA-Lab Cert. No.: 6534.01

Shenzhen CTA Testing Technology Co., Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement.

#### ISED#: 27890 CAB identifier: CN0127

Shenzhen CTA Testing Technology Co., Ltd. has been listed by Innovation, Science and Economic Development Canada to perform electromagnetic emission measurement.

The 3m-Semi anechoic test site fulfils CISPR 16-1-4 according to ANSI C63.10 and CISPR 16-1-4:2010.

#### **Environmental conditions** 3.3

During the measurement the environmental conditions were within the listed ranges: CTA TESTING

Temperature:	al an un	15-35 ° C
Humidity:	Constanting and a second second	30-60 %
Atmospheric pressure:		950-1050mbar

# 3.4 Test Description

## 3.4.1 Cellular Band (824-849MHz paired with 869-894MHz)

Test Item FCC Rule Requi		Requirements	Verdict
Effective(Isotropic) Radiated Output Power	§2.1046, §22.913	FCC: ERP ≤ 7W.	Pass
Modulation Characteristics	§2.1047	Digital modulation	N/A
Bandwidth	§2.1049	OBW: No limit. EBW: No limit.	Pass
Band Edges Compliance	§2.1051, §22.917	<ul> <li>≤-13dBm/1%*EBW, in 1MHz bands immediately outside and adjacent to The frequency block.</li> </ul>	Pass
Spurious Emission at Antenna Terminals	§2.1051, §22.917	FCC: ≤ -13dBm/100kHz, from 9kHz to 10th harmonics but outside authorized operating frequency ranges.	Pass
Field Strength of Spurious Radiation	§2.1053, §22.917	FCC: ≤ -13dBm/100kHz.	Pass
Frequency Stability	§2.1055, §22.355	≤ ±2.5ppm.	Pass
NOTE 1: For the verdict, th	ne "N/A" denote	s "not applicable", the "N/T" de notes "not tested".	

3.4.2 PCS Band (1850-1915MHz paired with 1930-1995MHz) TESTING

	Test Item	FCC Rule No.	Requirements	Verdict

#### TEST CONDITIONS AND RESULTS 4

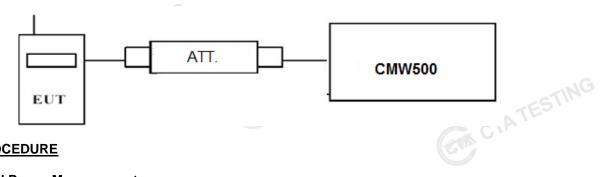

#### 4.1 **Output Power**

#### **TEST APPLICABLE**

CTATESTING During the process of testing, the EUT was controlled via R&S Digital Radio Communication tester (CMW500) to ensure max power transmission and proper modulation. This result contains output power and EIRP measurements for the EUT. In all cases, output power is within the specified limits.

#### 4.1.1 Conducted Output Power

## TEST CONFIGURATION

#### **TEST PROCEDURE**

#### **Conducted Power Measurement:**

- a) Place the EUT on a bench and set it in transmitting mode.
- b) Connect a low loss RF cable from the antenna port to a CMW500 by an Att.
- EUT Communicate with CMW500 then selects a channel for testing. C)
- Add a correction factor to the display CMW500, and then test. d)

## 4.1.2 Radiated Output Power

#### TEST DESCRIPTION

This is the test for the maximum radiated power from the EUT.

Rule Part 24.232(c) specifies, "Mobile/portable stations are limited to 2 watts e.i.r.p. Peak power" and 24.232(e) specifies that "Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage." Rule Part 22.913(a) specifies " The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts."

#### **TEST CONFIGURATION**

#### TEST PROCEDURE

- 1. EUT was placed on a 0.80 meter high non-conductive stand at a 3 meter test distance from the receive antenna. A receiving antenna was placed on the antenna mast 3 meters from the EUT for emission measurements. The height of receiving antenna is 0.80m. Detected emissions were maximized at each frequency by rotating the EUT through 360° and adjusting the receiving antenna polarization. The radiated emission measurements of all transmit frequencies in three channels (High, Middle, Low) were measured with peak detector.
- 2. A log-periodic antenna or double-ridged waveguide horn antenna shall be substituted in place of the EUT. The log-periodic antenna will be driven by a signal generator and the level will be adjusted till the same power value on the spectrum analyzer or receiver. The level of the spurious emissions can be calculated through the level of the signal generator, cable loss, the gain of the substitution antenna and the reading of the spectrum analyzer or receiver.
- 3. The EUT is then put into continuously transmitting mode at its maximum power level during the test. Set Test Receiver or Spectrum RBW=1MHz, VBW=3MHz, And the maximum value of the receiver should be recorded as (Pr).
- 4. The EUT shall be replaced by a substitution antenna. In the chamber, an substitution antenna for the frequency band of interest is placed at the reference point of the chamber. An RF Signal source for the frequency band of interest is connected to the substitution antenna with a cable that has been constructed to not interfere with the radiation pattern of the antenna. A power (P<sub>Mea</sub>) is applied to the input of the

## Page 13 of 48

substitution antenna, and adjust the level of the signal generator output until the value of the receiver reach the previously recorded (Pr). The power of signal source (PMea) is recorded. The test should be performed by rotating the test item and adjusting the receiving antenna polarization.

- 5. A amplifier should be connected to the Signal Source output port. And the cable should be connect between the Amplifier and the Substitution Antenna. The cable loss (P<sub>d</sub>), the Substitution Antenna Gain (Ga) and the Amplifier Gain (PAg) should be recorded after test.
  - The measurement results are obtained as described below:

Power(EIRP)=PMea- PAg - Pcl + Ga

We used SMF100A micowave signal generator which signal level can up to 33dBm, so we not used power Amplifier for substituation test; The measurement results are amend as described below: Power(EIRP)=P<sub>Mea</sub>- P<sub>cl</sub> + G<sub>a</sub>

- This value is EIRP since the measurement is calibrated using an antenna of known gain (2.15 dBi) and 6. known input power.
- ERP can be calculated from EIRP by subtracting the gain of the dipole, ERP = EIRP-2.15dBi. 7.

#### TEST LIMIT

Note: We test the H direction and V direction, V direction is worse.

According to 22.913(a) and 24.232(c), the ERP should be not exceed following table limits:

GSM850(GPRS850,EDGE850)							
Function	Power Step	Burst Peak ERP (dBm)					
GSM	5	≤38.45dBm (7W)					
GPRS	3	≤38.45dBm (7W)					

	PCS1900(GPRS1900,EDGE190	0)
Function	Power Step	Burst Peak EIRP (dBm)
GSM O	0	≤33dBm (2W)
GPRS	3	≤33dBm (2W)

#### 4.2 Radiated Spurious Emssion

#### TEST APPLICABLE

According to the TIA/EIA 603D:2010 test method, The Receiver or Spectrum was scanned from 30 MHz to the 10th harmonic of the highest frequency generated within the equipment, which is the transmitted carrier that can be as high as 1910 MHz. The resolution bandwidth is set as outlined in Part 24.238 and Part 22.917. The spectrum is scanned with the mobile station transmitting at carrier frequencies that pertain to low, mid and high channels of PCS1900 and GSM850.

#### **TEST CONFIGURATION**

#### TEST PROCEDURE

- EUT was placed on a 0.80 meter high non-conductive stand at a 3 meter test distance from the receive antenna. A receiving antenna was placed on the antenna mast 3 meters from the EUT for emission measurements. The height of receiving antenna is 0.80m. Detected emissions were maximized at each frequency by rotating the EUT through 360° and adjusting the receiving antenna polarization. The radiated emission measurements of all transmit frequencies in three channels (High, Middle, Low) were measured with peak detector.
- 2. A log-periodic antenna or double-ridged waveguide horn antenna shall be substituted in place of the EUT. The log-periodic antenna will be driven by a signal generator and the level will be adjusted till the same power value on the spectrum analyzer or receiver. The level of the spurious emissions can be calculated through the level of the signal generator, cable loss, the gain of the substitution antenna and the reading of the spectrum analyzer or receiver.

- The EUT is then put into continuously transmitting mode at its maximum power level during the test. Set 3. Test Receiver or Spectrum RBW=1MHz, VBW=3MHz, And the maximum value of the receiver should be recorded as (Pr).
- 4. The EUT shall be replaced by a substitution antenna. In the chamber, an substitution antenna for the frequency band of interest is placed at the reference point of the chamber. An RF Signal source for the frequency band of interest is connected to the substitution antenna with a cable that has been constructed to not interfere with the radiation pattern of the antenna. A power (P<sub>Mea</sub>) is applied to the input of the substitution antenna, and adjust the level of the signal generator output until the value of the receiver reach the previously recorded (Pr). The power of signal source (PMea) is recorded. The test should be performed by rotating the test item and adjusting the receiving antenna polarization.

A amplifier should be connected to the Signal Source output port. And the cable should be connect 5. between the Amplifier and the Substitution Antenna. The cable loss (Pcl), the Substitution Antenna Gain (Ga) and the Amplifier Gain (PAg) should be recorded after test. The measurement results are obtained as described below:

Power(EIRP)=P<sub>Mea</sub>- P<sub>Ag</sub> - P<sub>cl</sub> + G<sub>a</sub>

- This value is EIRP since the measurement is calibrated using an antenna of known gain (2.15 dBi) and 6. known input power.
- 7. ERP can be calculated from EIRP by subtracting the gain of the dipole, ERP = EIRP -2.15dBi.
- In order to make sure test results more clearly, we set frequency range and sweep time for difference 8. frequency range as follows table

Working Frequency	Subrange (GHz)	RBW	VBW	Sweep time (s)
	0.00009~0.15	1KHz	3KHz	30
	0.00015~0.03	10KHz	30KHz	10

-	14~18	1 MHz	3 MHz	3
G	18~20	1 MHz	3 MHz	2

#### TEST LIMITS

According to 24.238 and 22.917 specify that the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB.

The specification that emissions shall be attenuated below the transmitter power (P) by at least 43 + 10 log (P) dB, translates in the relevant power range (1 to 0.001 W) to -13 dBm. At 1 W the specified minimum attenuation becomes 43 dB and relative to a 30 dBm (1 W) carrier becomes a limit of -13 dBm. At 0.001 W (0 dBm) the minimum attenuation is 13 dB, which again yields a limit of -13 dBm. In this way a translation of the specification from relative to absolute terms is carried out.

Frequency	Channel	Frequency Range	Verdict
-NG	Low	9KHz-10GHz	PASS
GSM 850	Middle	9KHz -10GHz	PASS
TES	High	9KHz -10GHz	PASS
C	Low	9KHz -20GHz	PASS
PCS 1900	Middle	9KHz -20GHz	PASS
20 cm million	High	9KHz -20GHz	PASS
	GIA	CTATE	51.
<u>TEST RESULTS</u> Remark:			

- 1. We were tested all refer 3GPP TS151 010.
- 2. EIRP=P<sub>Mea</sub>(dBm)-P<sub>cl</sub>(dB) +G<sub>a</sub>(dBi)
- 3. We were not recorded other points as values lower than limits.
- 4. Margin = Limit EIRP

Note :We tested GSM and GPRS Mode, and recorded the worst case at the GSM Mode

#### 4.3 Occupied Bandwidth and Emission Bandwidth

#### **TEST APPLICABLE**

Similar to conducted emissions; occupied bandwidth measurements are only provided for selected frequencies in order to reduce the amount of submitted data. Data were taken at the extreme and mid frequencies of PCS1900 band and GSM850 band. The table below lists the measured 99% Bandwidth and -26dBc Bandwidth.

#### **TEST CONFIGURATION**

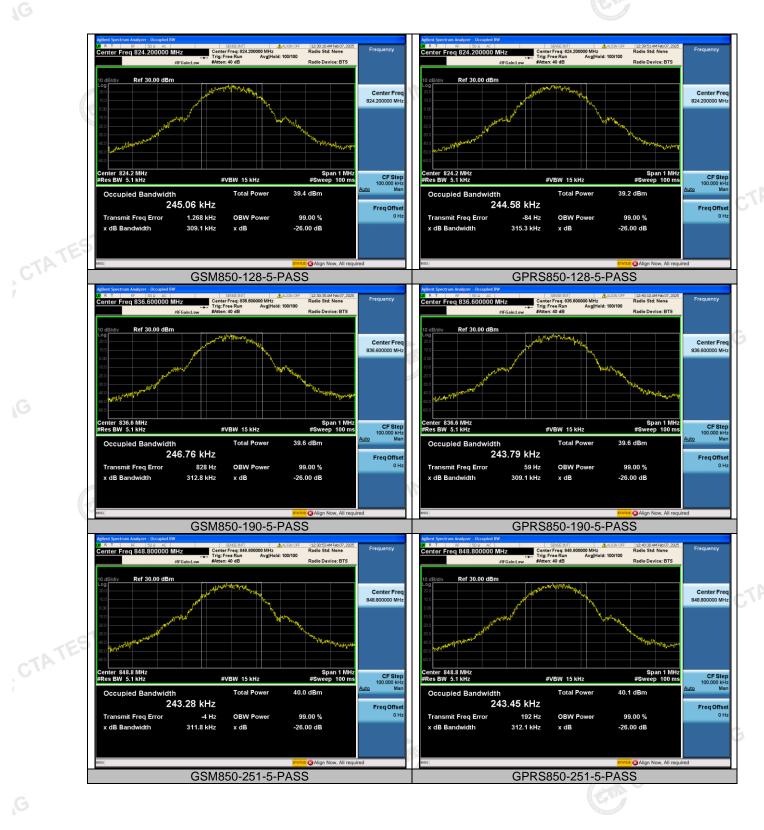

#### **TEST PROCEDURE**

- The EUT was set up for the max output power with pseudo random data modulation; 1.
- The Occupied bandwidth and Emission Bandwidth were measured with Aglient Spectrum Analyzer 2. N9030A (peak):
- 3. Set RBW=5.1KHz,VBW=51KHz,Span=1MHz,SWT=500ms;
- 4. Set SPA Max hold and View, Set 99% Occupied Bandwidth/ Set -26dBc Occupied Bandwidth
- 5. These measurements were done at 3 frequencies, 1850.20 MHz, 1880.00 MHz and 1909.80 MHz for PCS1900 band; 824.20MHz, 836.60 MHz and 848.80 MHz for GSM850 band. (Low, middle and high of operational frequency range).

#### Band Edge Complicance 4.4

#### **TEST APPLICABLE**

During the process of testing, the EUT was controlled via Aglient Digital Radio Communication tester (CMW500) to ensure max power transmission and proper modulation.

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- The EUT was set up for the max output power with pseudo random data modulation; 1.
- The power was measured with Aglient Spectrum Analyzer N9030A; 2.
- Set RBW=5.1KHz,VBW=51KHz,Span=3MHz,SWT=300ms, Dector: RMS;
- 4. These measurements were done at 3 frequencies, 1850.20 MHz, 1880.00 MHz and 1909.80 MHz for PCS1900 band; 824.20 MHz, 836.60 MHz and 848.80 MHz for GSM850 band. (bottom, middle and top of CTATESTING operational frequency range).

#### 4.5 Spurious Emssion on Antenna Port

#### TEST APPLICABLE

The following steps outline the procedure used to measure the conducted emissions from the EUT.

- 1. Determine frequency range for measurements: From CFR 2.1057 the spectrum should be investigated from the lowest radio frequency generated in the equipment up to at least the 10<sup>th</sup> harmonic of the carrier frequency. For the equipment of PCS1900 band, this equates to a frequency range of 9 KHz to 19.1 GHz, data taken from 9 KHz to 25 GHz. For GSM850, data taken from 9 KHz to 9 GHz.
- 2. The sweep time is set automatically by instrument itself. That should be the optimal sweep time for the span and the RBW. If the sweep time is too short, that is sweep is too fast, the sweep result is not accurate; if the sweep time is too long, that is sweep is too low, some frequency components may be lost. The instrument will give an optimal sweep time according the selected span and RBW.
- 3. The procedure to get the conducted spurious emission is as follows: The trace mode is set to MaxHold to get the highest signal at each frequency; Wait 25 seconds; Get the result.
- 4. Determine EUT transmit frequencies: below outlines the band edge frequencies pertinent to conducted emissions testing.

#### **TEST CONFIGURATION**

#### **TEST PROCEDURE**

- 1. The EUT was set up for the max output power with pseudo random data modulation;
- 2. The power was measured with Agilent Spectrum Analyzer N9030A (peak);
- These measurements were done at 3 frequencies, 1850.20 MHz, 1880.00 MHz and 1909.80 MHz for PCS1900 band; 824.20 MHz, 836.60 MHz and 848.80 MHz for GSM850 band. (Low, middle and high of operational frequency range).

#### TEST LIMIT

Part 24.238 and Part 22.917 specify that the power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB.

The specification that emissions shall be attenuated below the transmitter power (P) by at least 43 + 10 log (P) dB, translates in the relevant power range (1 to 0.001 W) to -13 dBm. At 1 W the specified minimum attenuation becomes 43 dB and relative to a 30 dBm (1 W) carrier becomes a limit of -13 dBm. At 0.001 W (0 dBm) the minimum attenuation is 13 dB, which again yields a limit of -13 dBm. In this way a translation of the specification from relative to absolute terms is carried out.

#### TEST RESULTS

Note:We tested GSM and GPRS mode and recorded the worst case at the GSM mode.
