The major change filed under this application is:

Change 1. The integral antenna was re-designed from a wire type to a printed circuit board antenna.

Change 2. A 0402 inductance 27nH (C342) was added to the power amplifier output to increase the amplifier linearity in the 5 GHz frequency band.

Change 3. A 0402 inductance 1nH (L400) and a 0402 capacitance 1.2pF (C403) was added to the power amplifier output to reduce the second harmonic and improve the mask in the 2.4 GHz frequency band.

Change 4. Change the test port location.

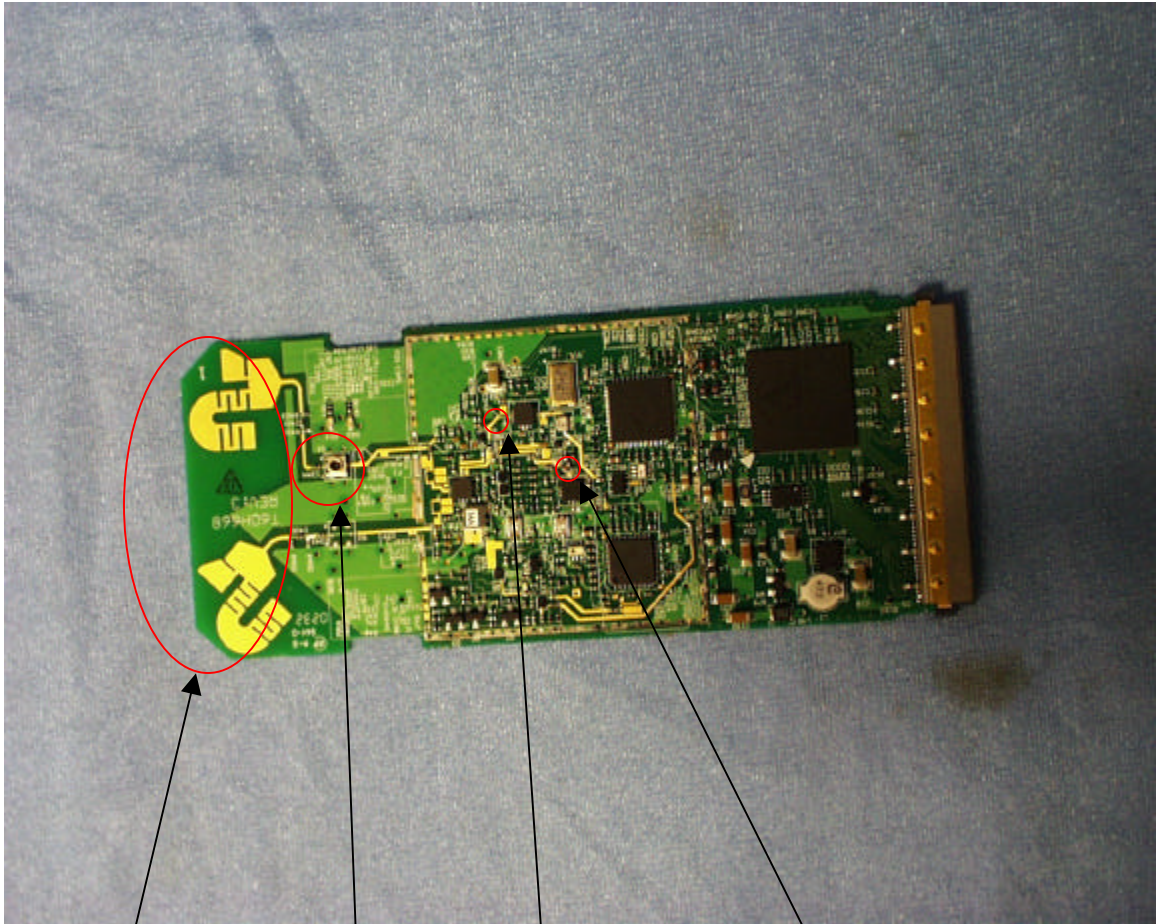

If you have any questions regarding this application, please feel free to contact me.

Sincerely yours,
