## 1. ATTESTATION OF TEST RESULTS

**COMPANY NAME:** Axon Enterprise Inc.  
17800 North 85th Street  
Scottsdale, AZ 85255, USA

**EUT DESCRIPTION:** TASER 10 VR CONTROLLER

**MODEL:** VR1000

**BRAND:** Axon

**SAMPLE RECEIPT DATE:** 2023-07-11

**DATE TESTED:** 2023-07-26

| APPLICABLE STANDARDS                    |              |
|---|--------------|
| STANDARD                                | TEST RESULTS |
| FCC PART 1 SUBPART I & PART 2 SUBPART J | Complies     |
| ISED CANADA RSS-102 ISSUE 5             | Complies     |

UL LLC tested the above equipment in accordance with the requirements set forth in the above standards. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. All samples tested were in good operating condition throughout the entire test program. Measurement Uncertainties are published for informational purposes only and were not taken into account unless noted otherwise.

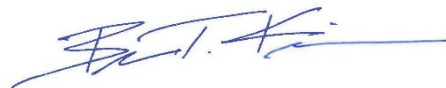

This document may not be altered or revised in any way unless done so by UL LLC and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL LLC will constitute fraud and shall nullify the document.

## 2. TEST METHODOLOGY

All calculations were made in accordance with FCC Parts 1.1310, 2.1091, 2.1093, KDB 447498 D01 v06, KDB 447498 D03 V01, IEEE Std C95.1-2005, and IEEE Std C95.3-2002.

This report contains data provided by the customer which can impact the validity of results. UL LLC is only responsible for the validity of results after the integration of the data provided by the customer.

## 3. REFERENCES

Output power, Duty cycle and Antenna gain data is excerpted from the applicable test reports or client declarations.

## 4. FACILITIES AND ACCREDITATION

UL LLC is accredited by A2LA, certification # 0751.06, for all testing performed within the scope of this report. Testing was performed at the locations noted below.

|                                     | Address  | ISED CABID | ISED Company Number | FCC Registration |

| <input checked="" type="checkbox"/> | Building:<br>2800 Perimeter Park Dr. Suite B<br>Morrisville, NC 27560, U.S.A |            | 27265               |                  |

## 5. DECISION RULES AND MEASUREMENT UNCERTAINTY

### 5.1. METROLOGICAL TRACEABILITY

The measuring equipment used to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

### 5.2. DECISION RULES

For all tests where the applicable  $U_{LAB} \leq U_{MAX}$  the Decision Rule is based on Simple Acceptance in accordance with ISO Guide 98-4: 2012 Clause 8.2, where  $U_{MAX} = 30\%$  (0.3) for RF Exposure evaluations. (Measurement uncertainty is not taken into account when stating conformity with a specified requirement.)

For all tests where the applicable  $U_{LAB} > U_{MAX}$  the Decision Rule is based on Guarded Acceptance in accordance with ISO Guide 98-4: 2012 Clause 8.3.2, with a guard band equal to  $(U_{LAB} - U_{MAX})$ , where  $U_{MAX} = 30\%$  (0.3) for RF Exposure evaluations. (Test results are adjusted by the value of the guard band to determine conformity with a specified requirement.)

## 6. DEVICE UNDER TEST

The EUT is a TASER 10 VR CONTROLLER that contains a BLE transceiver.

Separation distances, output power, and antenna gain have been declared by the manufacturer and can be found in documentation provided.

## 7. STANDALONE SAR TEST EXCLUSION CONSIDERATIONS

### 7.1. FCC

SAR test exclusion in accordance with KDB 447498.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq 50$  mm are determined by:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [f(\text{GHz})] \leq 3.0$ , for 1-g SAR and  $\leq 7.5$  for 10-g extremity SAR, where

- $f(\text{GHz})$  is the RF channel transmit frequency in GHz.
- Power and distance are rounded to the nearest mW and mm before calculation.
- The result is rounded to one decimal place for comparison.

This test exclusion is applicable only when the minimum test separation distance is  $\leq 50$  mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is  $< 5$  mm, a distance of 5 mm is applied to determine SAR test exclusion.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $> 50$  mm are determined by:

- $\{[\text{Power allowed at numeric threshold for 50 mm}]\} + [(\text{test separation distance} - 50 \text{ mm}) \cdot (f(\text{MHz})/150)]$  mW, for 100 MHz to 1500 MHz
  - $f(\text{MHz})$  is the RF channel transmit frequency in MHz.
- $\{[\text{Power allowed at numeric threshold for 50 mm}]\} + [(\text{test separation distance} - 50 \text{ mm}) \cdot 10]$  mW, for  $> 1500$  MHz and  $\leq 6$  GHz.

**SAR Exclusion Calculation Table for Portable Devices (separation distance  $< 50$ mm)**

| Tx          | Frequency (MHz) | PK Output power |      | Separation distances (mm) | Calculated Threshold |
|-------------|-----------------|-----------------|------|---------------------------|----------------------|
|             |                 | dBm             | mW   |                           |                      |
| BLE 2.4 GHz | 2480            | 8.01            | 6.32 | 27.86                     | 0.4                  |

#### **Conclusion:**

The computed values are  $< 3$ ; therefore, the device qualifies for Standalone SAR test exclusion.

Note: minimum distance used in above table is lowest value declared distance.

## 7.2. ISED CANADA

The SAR exclusion table from RSS-102 issue 5 is reproduced below:

**Table 1: SAR evaluation - exemption limits for routine evaluation based on frequency and separation distance.**

| Frequency MHz | Exemption Limits (mW)          |                                |                                |                                |                                |
|---------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|
|               | At separation distance of ≤5mm | At separation distance of 10mm | At separation distance of 15mm | At separation distance of 20mm | At separation distance of 25mm |
| ≤300          | 71 mW                          | 101 mW                         | 132 mW                         | 162 mW                         | 193 mW                         |
| 450           | 52 mW                          | 70 mW                          | 88 mW                          | 106 mW                         | 123 mW                         |
| 835           | 17 mW                          | 30 mW                          | 42 mW                          | 55 mW                          | 67 mW                          |
| 1900          | 7 mW                           | 10 mW                          | 18 mW                          | 34 mW                          | 60 mW                          |
| 2450          | 4 mW                           | 7 mW                           | 15 mW                          | 30 mW                          | 52 mW                          |
| 3500          | 2 mW                           | 6 mW                           | 16 mW                          | 32 mW                          | 55 mW                          |
| 5800          | 1 mW                           | 6 mW                           | 15 mW                          | 27 mW                          | 41 mW                          |

| Frequency MHz | Exemption Limits (mW)          |                                |                                |                                |                                 |
|---------------|--------------------------------|--------------------------------|--------------------------------|--------------------------------|---------------------------------|
|               | At separation distance of 30mm | At separation distance of 35mm | At separation distance of 40mm | At separation distance of 45mm | At separation distance of ≥50mm |
| ≤300          | 223 mW                         | 254 mW                         | 284 mW                         | 315 mW                         | 345 mW                          |
| 450           | 141 mW                         | 159 mW                         | 177 mW                         | 195 mW                         | 213 mW                          |
| 835           | 80 mW                          | 92 mW                          | 105 mW                         | 117 mW                         | 130 mW                          |
| 1900          | 99 mW                          | 153 mW                         | 225 mW                         | 316 mW                         | 431 mW                          |
| 2450          | 83 mW                          | 123 mW                         | 173 mW                         | 235 mW                         | 309 mW                          |
| 3500          | 86 mW                          | 124 mW                         | 170 mW                         | 225 mW                         | 290 mW                          |
| 5800          | 56 mW                          | 71 mW                          | 85 mW                          | 97 mW                          | 106 mW                          |

The minimum antenna to user distance that will be encountered in normal use is 27.86mm while in use (trigger finger – limb worn) and 37.58mm while not in use (holster - body). This results in an exemption limit of 174.33mW while in use (limb worn) and 148.8mW while not in use (body) at 2450 MHz.

| Tx  | Frequency (MHz) | Maximum Pk Power | Antenna Gain | 3.83 dBi |
|-----|-----------------|------------------|--------------|----------|
|     |                 |                  | (dBm)        | (mW)     |
| BLE | 2480            | Conducted        | 8.01         | 6.32     |
|     |                 | E.I.R.P          | 11.84        | 15.28    |

As the maximum output power is 6.32mW conducted and 15.28mW EIRP, the DUT qualifies for SAR test exclusion.

## END OF TEST REPORT
