

CIRCUIT DESCRIPTION

The CFS8DL5853-2 is electrically and functionally identical to the CFS8DL5853-1. All component designations and functions remain the same as the CFS8DL5853, the CFS8DL5853-2 has had some of the 'through hole' components restored, as well as the substitution of a cheaper transistor for the OCS and PA RF stages. (These changes were made as part of a cost reduction project).
