FCC TEST REPORT

Application No. : SZEMO061102400RF
Applicant: Shenzhen Gospell Smarthome Electronic Co., Ltd.
FCC ID: TW5GC8002
Fundamental Carrier Frequency : 5.725-5.875GHz
Equipment Under Test (EUT):
Name: Wireless Camera/ wireless receiver
Item No.: Camera: GC8002
Receiver: GC7002/GC7003♣
♣ Please refer to section 2 of this report which indicates which item was actually tested and which were electrically identical.
Standards: FCC PART 15 Supart C: 2006
Date of Receipt: 20 November 2006
Date of Test: 20 to 29 November 2006
Date of Issue: 30 November 2006

Test Result :	PASS *
----------------------	---------------

* In the configuration tested, the EUT complied with the standards specified above.

This report refers to the General Conditions for Inspection and Testing Services, printed overleaf
This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.
This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or testing done by SGS International Electrical Approvals in connection with, distribution or use of the product described in this report must be approved by SGS International Electrical Approvals in writing.

2 Test Summary

Test	Test Requirement	Stanadard Paragraph	Result
Conducted Emission	FCC PART 15 :2006	Section 15.207	PASS
Flied Strength of Harmornics or other Frequency	FCC PART 15 :2006	Section 15.249 (a) Section 15.209	PASS *
Occupied Bandwidth	FCC PART 15 :2006	Section 15.249	PASS

♣Remark:

Camera: GC8002

Receiver: GC7002/GC7003

Only the sample in the picturs in this report was tested, since the electrical circuit design, layout, components used and internal wiring were identical for the above items, with only difference being the outer decoration.

5.3.2 Radiated Emissions

5.3.2.1 Test in transmitting mode

Test Requirement:	FCC Part15 C
Test Method:	Based on FCC Part15 C Section 15.249
Test Date:	24 November 2006
Measurement Distance:	3m (Semi-Anechoic Chamber)
Frequency range	30 MHz – 10GHz for transmitting mode. Test instrumentation resolution bandwidth 120 kHz (30 MHz - 1000 MHz), 1 MHz (1000 M – 40GHz)
Operation:	Receive antenna scan height 1 - 4 m, polarization Vertical/ Horizontal
Requirements:	

Fundamental Frequency (MHz)	Field Strength of Fundamental (dBuV/m @ 3m)	Field Strength of Harmonics and Spurious Emissions (dBuV/m @ 3m)
902 to 928	94.0	54.0
2400 to 2483.5	94.0	54.0
5725 to 5875	94.0	54.0
24000 to 24250	108.0	68.0

The fundamental frequency of the EUT is 5725 to 5875 MHz

The limit for average field strength dBuV/m for the fundamental frequency = 94.0 dBuV/m.

No fundamental is allowed in the restricted bands.

The limit for average field strength dBuV/m for the harmonics and spurious frequencies = 54.0 dBuV/m. Spurious in the restricted bands must be less than 54.0 dBuV/m or 15.209.

Test Procedure: The procedure used was ANSI Standard C63.4-2003. The receiver was scanned from 30MHz to 40GHz. When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes. For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage. The worst case emissions were reported.

Test Configuration:

SGS-CSTC Standards Technical Services Co., Ltd.

Report No.: SZEMO061102400RFI

Page: 12 of 24

The field strength is calculated by adding the Antenna Factor, Cable Factor & Peramplifier . The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading + Antenna Factor + Cable Factor – Peramlifer Factor

The following test results were performed on the **Channel-1** of EUT:

N/A: refer to remark 1).

Remark:

1). For this intentional radiator operates below 10 GHz, the spectrum shall be investigated to the tenth harmonic of the highest fundamental frequency. And above the fifth harmonic of this intentional radiator, the disturbance is very low. So the test result only displays to 3rd harmonic.

2). According to 15.249 (e) As shown in Section 15.35(b), for frequencies above 1000 MHz, the above field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation.

TEST RESULTS: The unit does meet the FCC requirements.

The following test results were performed on the **Channel-3** of EUT:

5.3.3 Band Edges Measurement

Test Requirement: FCC Part15 C

Test Method: Based on FCC Part15 C Section 15.249.

Test Date: 25 November 2006

Requirements:

Regulation 15.249

Emission radiated outside of the specified frequency band, except for harmonics, shall be attenuated by at least 50dB below the level of the fundamental or to the general radiate emission limits in Section 15.209, whichever is the lesser attenuation.

Test Procedures:

The transmitter output was connected to the spectrum analyzer via a low loss cable. Set both RBW and VBW of spectrum analyzer to 100 kHz with suitable frequency span including 100 kHz bandwidth from band edge. The band edges were measured and recorded.

Test Result:

Please refer to the measurement graph and data.

5.3.4 Occupied Bandwidth

Test Requirement: FCC Part 15 C

Test Method: Based on FCC Part15 C Section 15.249:

Operation within the band 5.725 – 5.875GHz

Test Date: 03 November 2006

Requirements: 15.249 (d) Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50 dB below the level of the fundamental or to the general radiated emission limits in Section 15.209, whichever is the lesser attenuation.

Method of measurement: A small sample of the transmitter output was fed into the Spectrum Analyzer and the attached plot was taken. The vertical is set to 10dB per division. The horizontal scale is set to 1MHz per division.

The occupied bandwidth and band edge as below:

Channel 1:

Channel 3:

Channel 4:

The test result for the Emissions radiated outside of the specified frequency bands , please refer the section 5.3.2 of this report.

The results: The unit does meet the FCC requirements.

5.3.5 Antenna Requirement

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

And according to FCC 47 CFR Section 15.247(b), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.
