## FCC ID: 2AP7NSD005

According to KDB 447498 D04 Interim General RF Exposure Guidance v01

## 1. 1-mW Test Exemption

Per § 1.1307(b)(3)(i)(A), a single RF source is exempt RF device (from the requirement to show data demonstrating compliance to RF exposure limits, as previously mentioned) if the available maximum time-averaged power is no more than 1 mW, regardless of separation distance.

This exemption applies to all operating configurations and exposure conditions, for the frequency range 100 \( \text{klz} \) to 100 \( \text{klz} \), regardless of fixed, mobile, or portable device exposure conditions. This is a standalone exemption, and it cannot be applied in conjunction with any other test exemption.

#### 2. Test Result

Mode	Frequency Range (Mb)	Maximum Average Target Power (dBm)	Maximum Tune up (dB)	Maximum Average Output Power (dBm)		Limit	Result
				(dB <b>m</b> )	(Wm)	(ww)	
Other Category	905 ~ 923	-4.50	1.00	-3.50	0.45	1	Pass

## Note;

- Maximum average target power is the manufacturer's declared rated power.
- Maximum average output power = Maximum average target power ( dBm) + Maximum tune up (dB).

# 3. Conclusion: No SAR is required.
