

**Antenna Part Number: 07467-01**

**Antenna Gain: 6 dBi**

**Antenna Connector: SMA (\*)**

(\*) To comply with the FCC's and Industry Canada's unique connector requirements, the antenna contains an RFID tag directly wired to the antenna connector. When the transceiver module is activated, it transmits a signal into the antenna cable checking for the correct code from the RFID tag on the antenna. If the module does not receive the correct code back, it will not transmit under any circumstance. This feature prevents users from using antennas or cables other than the Intermec specified, certified antennas and cables.
