

ePID 2.0 Production Label Requirement

1/31/2019 - Update

Production devices

- The label design on the next page is defined for the North American project with the WP7603 and the AT&T SIM chip installed.
- AMKC4J-14H092-AA is the North American part number - there will be a different number for other regional devices
- S/N 1PDxxxxxx will be the sequential number for each device build and is what Ford calls the FESN (Ford Electronic Serial Number). This serial number will be what is included in the QR code.
- The TAC for the IMEI is 355552010 and needs to be programmed in at the plant (or maybe at the Vietnam plant that builds the WP).
- The FCC-ID's, IC's and GSDB will be fixed for the NA device.
- The outer ring on this picture is not to be laser etched, only is there to indicate the outer edges of the recessed area in the case.
- The FoMoCo logo is to be downloaded from the Ford approved libraries.

FoMoCo

AMKC4J-14H092-AA

S/N: 1PDxxxxxx

IMEI: 35552010xxxxxx

FCC ID: L2CCT150F

**Contains: L2CWP76C
L2CLB1PJ**

IC: 3659A-CT150F

**Contains: 3659A-WP76C
3659A-LB1PJ**

Made in China

GSDB: HH96A
