

### **DESCRIPTION OF CHANGES**

The MR701B was previously approved under FCC ID No. BCR-RPT-MR701B. This filing is for a Class II Permissive Change to this certification.

The unit presented in this filing is electrically identical to the previously approved unit. A Class II Permissive Change is necessary, however, because the unit is housed in a different chassis.

Since the chassis was changed, it was decided that Field Strength of Spurious Emissions (Case Leakage) should be performed on the new configuration. The results of this re-evaluation are presented in KTL test report no. 9L0666RUS.
