

## STATEMENT ON EXPOSURE TO ELECTROMAGNETIC FIELDS

Type of equipment: Access reader

Brand name: Gantner

Type / Model: GAT SLR 7310

Manufacturer: Gantner Electronic GmbH

## **STANDARD**

47 CFR §2.1091, 47 CFR §1,1307, 47 CFR §1.1310 KDB 447498 D01 v06

## **Evaluation**

Maximum input power to the transmitter is ... mW. We can assume that the transmitter is ideal and all ... mW are sent to the antenna. Magnetic coil antenna gain has maximum 0 dBi gain.

 $\boxtimes$  Maximum output power of the RFID transmitter is less than 500 mW, because according to form 731 the maximum input power is  $\le$  500 mW. Magnetic coil antenna gain has maximum 0 dBi gain. Therefore the maximum output power can never be higher than the maximum input power.

A worst case MPE calculation is as follows:

$$S = \frac{EIRP}{\pi * r^2}$$

EIRP = 500 mW r = 20 cm

 $S = 0.398 \text{ mW} / \text{cm}^2$

## Limits

Per 47 CFR §1.1310 MPE limit for 13.56 MHz transmitter is 0,98 mW / cm<sup>2</sup>

RSS 102 clause 2.5.2 Routine rf exposure evaluation exemption limit for transmitters operating at 20 MHz or lower frequencies is 1W eirp.

RELETER Deutschland Comby

O.87600 Kaufber

Transmitter complies with these limits without testing
