RADIO FREQUENCY EXPOSURE EVALATION

General Information

Savant Technologies LLC, dba GE Lighting, a Savant company
Cync Dynamic Effects Smart Café Lights
CCF48CDOD/ENS, CCF24CDOD/ENS,
CCF96CDOD/ENS, CCF72CDOD/ENS
BLE 4.2, IEEE 802.11 b/g/n.

Description of Test Facility

Name of Firm	:	Audix Technology (Shanghai) Co., Ltd.
Site Location	:	3F, Building 34, No. 680 Guiping Rd.,
		Caohejing, Hi-Tech Park, Shanghai 200233, China
NVLAP, Lab Code	:	200371-0
FCC Designation Number	:	CN5027
Test Firm Registration Number	er:	954668

Evaluation Method

KDB 447498 D04 Interim General RF Exposure Guidance v01

Applicable Standard:

KDB 447498 *D04* v01:

Section 2.1.3: SAR-Based Exemption.

A more comprehensive exemption, considering a variable power threshold that depends on both the separation distance and power, is provided in § 1.1307(b)(3)(i)(B). This exemption is applicable to the frequency range between 300 MHz and 6 GHz, with test separation distances between 0.5 cm and 40 cm, and for all RF sources in fixed, mobile, and portable device exposure conditions. Accordingly, a RF source is considered an RF exempt device if its available maximum time-averaged (matched conducted) power or its effective radiated power (ERP), whichever is greater, are below a specified threshold. This exemption threshold was derived based on general population 1-g SAR requirements and is detailed in Appendix C.

FCC CFR 47 §1.1307(b)(3)(i)(B):

A single RF source is exempt if the available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P_{th} (mW) described in the following formula. This method shall only be used at separation distances (cm) from 0.5 centimeters to 40 centimeters and at frequencies from 0.3 GHz to 6 GHz (inclusive). P_{th} is given by:

$$P_{th} (mW) = \begin{cases} ERP_{20 \ cm} (d/20 \ cm)^x & d \le 20 \ cm \\ \\ ERP_{20 \ cm} & 20 \ cm < d \le 40 \ cm \end{cases}$$

Where

$$x = -\log_{10}\left(\frac{60}{ERP_{20\ cm}\sqrt{f}}\right)$$
 and f is in GHz;

and

$$ERP_{20\ cm}\ (\text{mW}) = \begin{cases} 2040f & 0.3\ \text{GHz} \le f < 1.5\ \text{GHz} \\ \\ 3060 & 1.5\ \text{GHz} \le f \le 6\ \text{GHz} \end{cases}$$

d = the separation distance (cm);

Mode H	Frequency	Max output power		Ant. Gain	Max E.I.R.P		P _{th}
	MHz	dBm	mW	dBi	dBm	mW	mW
BLE	2442	6.385	4.35	2	8.385	6.894	3060
802.11b	2462	17.74	59.43	2	19.74	94.189	3060
802.11g	2437	12.67	18.49	2	14.67	29.309	3060
802.11n	2462	12.1	16.22	2	14.1	25.704	3060

RF Exposure evaluation:

Note1: For this EUT, and the separation distance is <u>20 cm</u>. And the Bluetooth and WIFI can not transmit at the same time.

Note2: The Conducted output power and Maximum EIRP both no greater than the threshold P_{th} , that meets the exemption, the RF exposure evaluation is not required.
