Probe 266 Dynamic Range

The plot displays the dynamic range of Probe 266, showing Voltage [microV] on the Y-axis (log scale, 0.01 to 10000) versus Electric Field [(V/m)^2] on the X-axis (log scale, 1.00 to 10,000,000.00). Two data series are plotted:

- Uncompensated:** Represented by dark blue diamonds connected by a line. It shows a linear relationship on the log-log scale, with a slope of approximately 0.5.
- Compensated:** Represented by magenta squares connected by a line. It shows a linear relationship on the log-log scale, with a steeper slope of approximately 0.75.

The compensated data points generally follow the uncompensated data points at lower electric fields but diverges significantly at higher electric fields, reaching a voltage of approximately 1500 microV at 10,000,000 (V/m)^2, while the uncompensated data reaches approximately 400 microV at the same electric field.
