Description of Permissive Change

The application is prepared for FCC class II permissive change. The difference with the original application is adding DFS band (5250 ~ 5320 MHz, 5500 ~ 5720 MHz) via software.

SpaceX software configures the Wi-Fi router while communicating with the Starlink network. Software is installed in the router and automatically updates without end-user's intervention. The firmware is set up and updated by the SpaceX Starlink network and is not end-user accessible.

Both devices, original and updated versions, are electrically identical in all aspects except the abovementioned.
