## Preface

## Warnings

### All the following "Safety Precautions" must be observed during the entire installation and operation of the CrossFire system.

The CrossFire system components are designed for maximum safety and reliability when they are installed, used, and maintained by trained and qualified technicians following the procedures and instructions contained in this manual. To assure the safe operation of your system, always follow the safety and operational recommendations in this manual.

- MP\_PS is not a consumer product. Please install and use MP\_PS in accordance with the instructions.
- Before installing or modifying any MP\_PS equipment, read and fully understand the entire instructions in this guide.
- Only qualified personnel are authorized to install and maintain the MP\_PS.
- Changes or modifications to the MP\_PS equipment not expressly approved by the manufacturer could void the product warranty and the user's authority to operate the equipment.
- Follow Electro Static Discharge precautions to avoid any damage to PCB, PSU, etc.
- Keep equipment powered-off during installing or modifying.
- Low path loss cables connected to antennas are highly recommended.
- This is NOT a CONSUMER device. It is designed for installation by FCC LICENSEES and QUALIFIED INSTALLERS. You MUST have an FCC LICENSE or express consent of an FCC License to operate this device. Unauthorized use may result in significant forfeiture penalties, including penalties in excess of \$100,000 for each continuing violation.
- This is NOT a CONSUMER device. It is designed for installation by an installer approved by an ISED licensee. You MUST have an ISED LICENCE or the express consent of an ISED licensee to operate this device.
- Il ne s'agit PAS d'un dispositif CONSOMMATEUR. Il est conçu pour être installé par un installateur agréé par un titulaire de licence ISED. Vous devez avoir un LICENCE ISED ou le consentement exprès d'un titulaire de licence de l'ISED pour l'utilisation de cet appareil.
- To comply with FCC RF exposure compliance requirements, each individual antenna used for this transmitter must be installed to provide a separation distance greater than 160cm or more from all persons during normal operation and must not be co-located with any other antenna for meeting RF exposure requirements.
- Pour se conformer aux exigences FCC en matière d'exposition RF, chaque antenne utilisée pour cet émetteur doit être installée pour assurer une distance de séparation supérieure ou supérieure à 160 cm de toutes les personnes pendant le fonctionnement normal et ne doit pas être co-localisée avec une autre antenne pour satisfaire aux exigences d'exposition RF.
- Antenna gain should not exceed 0 dBi.
- Le gain d'antenne ne doit pas dépasser 0 dBi

**Note:** This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTE:** This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

Contact us today: www.sunwave.com cf\_support@sunwave.com

© Sunwave MP\_PS\_User Manual | 5 of 46

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- -- Reorient or relocate the receiving antenna.
- -- Increase the separation between the equipment and receiver.
- -- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- -- Consult the dealer or an experienced radio/TV technician for help.

**Note:** Only authorized person can enter the area where the antenna is installed. And the person is fully aware of the potential for exposure and can exercise control over his or her exposure by leaving the area or by some other appropriate means. Awareness of the potential for RF exposure in a workplace or similar environment can be provided through specific training as part of a RF safety program

**NOTE:** This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

## **Site Considerations**

- 1. The system delay should be taken into consideration when there are neighboring BTS sites overlapping in coverage. Normal use of the system will not damage the base station; however, with the increase of RU during network coverage for indoor distribution, the uplink output noise level may affect the sensitivity of the base station, which should be considered during engineering design. Pick an ideal easy-to-reach location for installation convenience.
- 2. Pick an ideal easy-to-reach location for installation convenience.
- 3. Verify that there is a minimum of a 50cm radius of space around CrossFire equipment for the convenience of maintenance and on-site inspection.
- 4. Install CrossFire close to the service area for monitor and debugging.

## **Environmental Considerations**

Humidity and temperature can adversely effort the reliability of the CrossFire system. Therefore, it is highly recommended to install the equipment in locations with stable humidity, temperature and ventilating.

The equipment has to operate at humidity level and temperature range as follow:

- ♦ Maximum humidity: 85%
- ♦ AU Operating Temperature range: -10°C to +50°C
- ♦ MP-PS Operating Temperature range: -40°C to +50°C
- ♦ Storage Temperature range: -40°C to +70°C

Contact us today: www.sunwave.com cf\_support@sunwave.com

© Sunwave MP\_PS\_User Manual | 6 of 46

## **Warning Marks**

The warning marks on the CrossFire shell should be kept clean, readable, and identifiable.

**ALWAYS** disconnect all lines and power connections before servicing or disassembling this equipment.

NEVER touch the surface after power on the devices.

For performance and safety reasons, **NEVER** disassemble and remodel the devices.

© Sunwave MP\_PS\_User Manual | 7 of 46

## **Installation Preparation**

## **Unpacking and Inspecting**

This section discusses the procedures for receiving the shipment, inspecting the packing container, unpacking, and inspecting the device.

## **Inspecting the Packing Container**

Handle the packing container carefully. Inspect the packing container immediately on arrival at the installation site to verify that no apparent damage occurred during shipment. Ensure that the container is sound and that the waterproof and vibration warning notices are still visible. If possible, always inspect the equipment in the presence of the delivery person.

If any damage is observed:

- 1. Do not open or unpack the container.
- 2. Immediately contact the transportation carrier and notify them of the damage.
- 3. File a claim with the carrier once you determine the extent of any damage.
- 4. Return it to SUNWAVE's nearest RMA facility and contact SUNWAVE for RMA processing.

## **Unpacking the Device**

If the container appears to be in satisfactory condition:

- 1. Ensure both user and supplier representatives are in attendance during shipment inspection.
- 2. Confirm where you will store the device.
- 3. Ensure procedures are in place to handle the device and other equipment properly.
- 4. Ensure the following tools are available to unpack the shipment: hammer, paper cutter, and crowbar.
- 5. Open the packing container carefully. The device is contained in a protective package inside the packing container; however, caution is still necessary so as not to damage the internal package and device.
- 6. Remove the internal package from the packing container.
- 7. Unpack the device from the internal package carefully.

© Sunwave MP\_PS\_User Manual | 8 of 46

#### **Verifying the Contents**

To verify the contents of the package:

- 1. Verify that the contents and quantities agree with the Delivery Packing List.
- 2. Check the device model against the Delivery Packing List.
- 3. Notify SUNWAVE immediately if any discrepancies are discovered, to verify whether the complete and correct shipment has been received.

#### **Inspecting the Device**

After unpacking the device, place the device on solid ground and check the following to ensure the device has not been damaged:

- 1. Inspect the device's appearance, overall dimensions, and weight.
- 2. Check that the device has not been deformed or bent in any way.
- 3. Check that there are no warps, scratches, bubbles, or dirt marks.
- 4. Check that there are no loose, missing or incorrectly fastened screws.
- 5. Check that the installation slots in the cabinet sub-rack are rectangular.
- 6. Ensure that the guide bar has not been damaged and the fittings and auxiliary parts are intact.
- 7. Check that the silk-screened images on the device are visible and intact.

#### **Installation Preparation**

#### **Site Investigation**

Before installation, the installer should contact the project director to ensure that the site is suitable for installation. Details required include information about the installation site such as whether there is an iron tower or high mast nearby, the surrounding environmental conditions such as temperature and humidity, the power source, and so on. Installation staff should complete a site investigation with the project director before construction and conduct field observation of the installation site and the coverage area of the device, to confirm factors such as signal intensity, signal quality, the required coverage range, device location, antennafeeder system, and power supply system.

Note: Only maintenance personnel or users who understand the reason for access and are experienced with restricted area access and understand the necessary preventive measures should access the installation site.

© Sunwave MP\_PS\_User Manual | 9 of 46

#### **Installation Tools**

The following equipment and tools are required for a successful installation:

Electric percussion drill / Screwdriver / Wrench

#### **Torque Settings**

Туре	M3	M6	M10
Specified Torques	0.6Nm	5Nm	50Nm

#### Clearance

You must ensure the following mounting clearances for mounting within a 19" rack/cabinet:

 $\diamond$  Convection cooling:

Maintain 3U clearance between the bottom of the device and any other.

Maintain 3U clearance from the top surface of the device to the top of the rack.

♦ FAN Cooling:

You can mount the fan between the bottom of the device and any other.

Maintain 2U clearance between the bottom of the device and any other.

## Installing the Access Unit (AU)

Contact us today: www.sunwave.com cf\_support@sunwave.com

© Sunwave MP\_PS\_User Manual | 11 of 46

## **Accessories List**

© CAT-SCable 1.5m	© Ground	Wire 2m
I Suspension Loop	* AC Powe	er Lead 2.5m
	22.22	8 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8 8
	③ Screw M5*16	3 Screw M3*6

## **Rack Installation**

The Access Unit is a 19" 1U equipment shelf. When installing the Access Unit in a rack, make sure the mechanical loading of the rack is even to avoid a hazardous condition. The rack should safely support the combined weight of all the equipment and be securely anchored. Installing the Access Unit in a climate-controlled room with sufficient air circulation is recommended as the maximum ambient temperature is +50°C.

To install the Access Unit in the equipment rack.

1. Attach the 19" mounting brackets at the front of the AU, using 4 screws M3×6 per bracket and the Phillips screwdriver. Observe the orientation of the brackets.

© Sunwave MP\_PS\_User Manual | 12 of 46

Install the hangers in AU-PS.

Contact us today: www.sunwave.com cf\_support@sunwave.com

© Sunwave MP\_PS\_User Manual | 13 of 46

2. Recommended attaching the sliding rails to rack. (Not included in delivery).

- Choose an indoor location larger than 1000×800×2500mm and it is recommended that the rack is at least 200mm away from the wall.
- It is recommended that have plates installed for weight supporting.

© Sunwave MP\_PS\_User Manual | 14 of 46

3. Place the AU in the rack and secure the AU using 2 screws M6×16 on both sides and the Phillips screwdriver.

Contact us today: www.sunwave.com cf\_support@sunwave.com

M6 Cross Screw

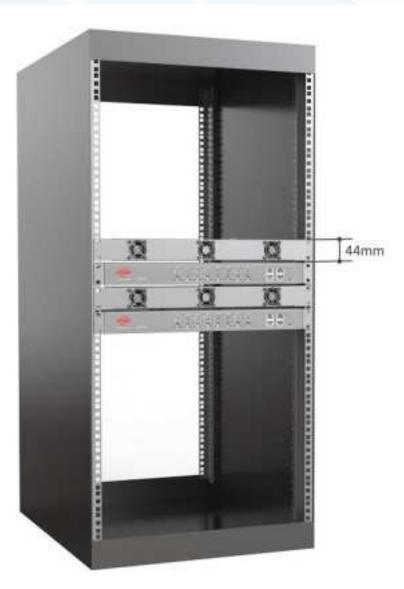

© Sunwave MP\_PS\_User Manual | 15 of 46

4. Install the fan for cooling if multiple AUs are installed in the same rack.

A It is necessary to allow at least 3 rack units (132mm) of free space below each unit for heat dissipation without fan installed or 1 rack unit (44mm) of free space below each unit with fan occupied in the middle.

Otherwise, the device temperature may rise and affect the service life of the device.

Contact us today: www.sunwave.com cf\_support@sunwave.com

© Sunwave MP\_PS\_User Manual | 16 of 46

- 5. Connect and lock the power cable at the AU rear side.
- 6. Connect and screw the ground wire at the AU rear side.

 Connect and tighten the power cable to AU-PS.

 Connect and screw the ground wire to AU-PS.

© Sunwave MP\_PS\_User Manual | 17 of 46

## **Wall Installation**

To install the Access Unit on the wall:

1. Rotate the handles 90° and attach them at the rear of the AU, using 4 screws M3×6 per bracket and the Phillips screwdriver. Observe the orientation of the brackets.

Rotate the hanger 90° and install in AU-PS.

Contact us today: www.sunwave.com cf\_support@sunwave.com

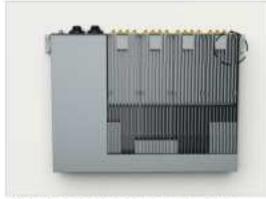

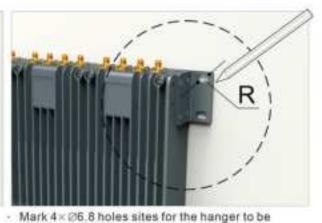

© Sunwave MP\_PS\_User Manual | 18 of 46

- 2. Mark 4 x Ø6.8mm drilling holes sites for the hanger to be attached to the wall.
- Drill 4 holes at the marked sites using percussion drill and embed 4×210 plastic expansion pipes. Note: H=70mm. 3.

Fasten the case with 4×M6 expansion bolt.

Choose an appropriate indoor location.

and embed 4ר8 plastic expansion pipes.

· Drill at the four sites using a percussion drill · Fasten the case with 4×ST4.5 self-tapping screws.

## **RF Connection**

The RF interface between the Access Unit and the service provider signal source (or CrossFire CPOI) is provided by duplex connections on the Active Combiner module.

To route and connect the coaxial cables to the Access Unit:

- 1. Obtain the required lengths of high performance, flexible, low loss 50Ω coaxial cable for all coaxial connections and route the cables from the signal source or CPOI to the Active Combiner module.
- 2. Connect the cables from the signal source to the QMA female connectors on the Active Combiner module on the back panel of the Access Unit.

Note: Each Active Combiner module has four connectors to support up to four inputs.

#### AU Rear Panel Interfaces

SN	Interface Name	Description

## **Optical Connection**

## **Optical Transceiver Module**

## Single Port Bidirectional SFP Transceiver

The Figure below shows a pair of single port Bidirectional SFP transceivers. For devices optical connection, the transceivers of two sides must be paired - the wavelength of one side is 1271nm, and the wavelength of another side is 1331nm. Otherwise it will fail the connection. All lower-level devices under this port won't be working in system.

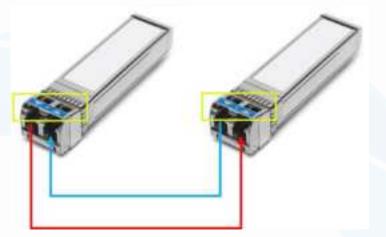

All the optical ports of all type devices have triangle LED indicators pointing to each port, which represents the synchronization status of the upper and lower optical modules. The indicator turns to green when optical modules are plugged in ports and synchronized. When connection is down, or there is no optical module in port, the indicator remains red.

## $^{ m I\!M}$ The single port SFP modules have to be used in pairs.

## **Dual Port SFP Transceiver**

The optical connector unit includes an optical module and optical fibre. The Figure below shows that when using dual-port SFP module, the optical transmitter and optical receiver should correspond to each other. In other words, the optical transmitter of optical module A should correspond to the optical receiver of optical module B, and the receiver of A should correspond to the transmitter of B. The optical receiver and transmitter terminals of the optical module can be determined by the triangular mark on the optical module. The triangular mark in the yellow box and the red and blue lines indicate the optical fibre connections.

Contact us today: www.sunwave.com cf\_support@sunwave.com

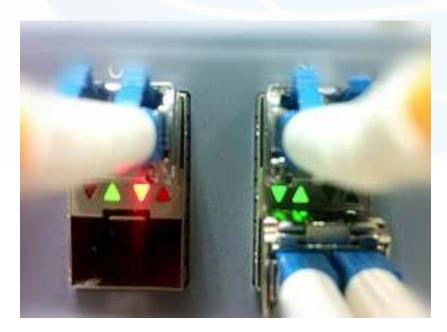

© Sunwave MP\_PS\_User Manual | 45 of 46

## **Optical Indicator**

Each pair (2) of optical module cages has four LED indicator arrows. The two on the left are green, and the two on the right are red as shown in Figure below. The indicator arrows represent the synchronization status of the upper and lower optical modules. When a pair of optical modules are synchronized (both uplink and downlink), the indicators turn green as shown in the right pair of indicators in Figure below. When the optical module is unplugged or not synchronized, the indicators are red as shown in the left pair of indicators. Check whether both indicators turn green after connecting one pair of optical modules. If the indicators are red, the terminal has not synchronized.
