

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test setup for frequencies below 30MHz. The setup is located inside an anechoic chamber with white, square-shaped absorbers on the walls. A yellow test fixture is mounted on a circular turntable on the floor. A metal frame is positioned in front of the turntable. The floor has yellow and black striped safety markings.
Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test setup for frequencies from 30MHz to 1GHz. The setup is located inside an anechoic chamber with white, square-shaped absorbers on the walls. A yellow test fixture is mounted on a circular turntable on the floor. A metal frame with several vertical rods is positioned in front of the turntable. The floor has yellow and black striped safety markings.

Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white, square-shaped pyramidal absorbers. The floor is covered with blue, conical absorbers. A white, rectangular test object is placed on a yellow wooden stand in the center. To the right, a red, shield-shaped absorber is visible, along with some electronic equipment and cables.
Radiation Emission Test Setup (Above 18GHz)	 A photograph of a radiation emission test chamber, similar to the one above. The interior walls are lined with white, square-shaped pyramidal absorbers. The floor is covered with blue, conical absorbers. A white, rectangular test object is placed on a yellow wooden stand in the center. To the right, a blue cable is connected to a piece of equipment, and a black, cylindrical antenna is visible.
