

SSRL, Conducted and Radiated Emission Measurements:

A full test report from Criterion Technology (Test Report: INO 99020303) is included with this submission.

Measurement Facilities:

The testing was performed by:

Criterion Technology
1350 County Rd. 16
Rollinsville, CO 80474
Phone: 303-682-6600
Fax: 303-682-6672

The site information for Criterion Technology is on file with the FCC

Description of Photographs:

Photographs have been taken of the transmitter board assembly and of the final assembly:

- A. Photograph A shows the top view of the SSRL transceiver board with the shield removed.
- B. Photograph B shows the top view of the SSRL transceiver board with the shield in place.
- C. Photograph C shows the back view of the SSRL transceiver board.
- D. Photograph D shows the outside view of the completed product with the cover in place.

Section 1 Executive Summary

The test article was in compliance with all the test standards listed below.

FCC Part 15 Subpart A	
FCC Part 15 Subpart B	Conducted Emissions
FCC Part 15 Subpart B	Radiated Emissions
FCC Part 15 Subpart C	Intentional Radiators, Paragraphs 15.247(a)(1)(i) Bandwidth of Hopping
Channel Only, and 15.247(c)*	

All test methods were performed in accordance with the standards listed above.

***Inovonics will prove compliance to the remaining applicable portions CFR 47 Part 15.247.**

Section 2 Emissions Test Standards

The emissions tests were performed according to following standards:

FCC Part 15, Subpart B

FCC Part 15, Subpart C

☐ Class A

☒ Class B

Paragraphs 15.247(a)(1)(i) Bandwidth of Hopping Channel
Only, and 15.247(c)

TEST REPORT

Part 2.2 FCC Part 15 Subpart B -Radiated Emissions

Measurement or *radiated emissions (electric field)* in the frequency range of 30 MHz-1000 MHz were tested in a horizontal and vertical polarization as indicated below:

Environmental conditions in the lab:

Date(s) of Test: mm/dd/yy 2/15/99
Temperature: 69°F
Rel. Humidity 15%
Test Voltage [X]120 V, 60Hz [] ____ V, ____ Hz

Test location:

[X] Criterion Technology Open Area Test Site
[] Pre-Scan In Semi-Anechoic Chamber
[] Not applicable

Test distance (antenna - EUT):

[] 1 meter	[] Preliminary Measurement	[] Final Measurement
[] 3 meters	[] Preliminary Measurement	[] Final Measurement
[X] 10 meters	[X] Preliminary Measurement	[X] Final Measurement
[] 30 meters	[] Preliminary Measurement	[] Final Measurement
[] Not applicable		

Test instruments:

[X] Hewlett Packard Spectrum Analyzer, Model 8566B
[X] Hewlett Packard Quasi Peak Adapter, Model 85650A
[] Hewlett Packard Tracking Generator, Model 85645A
[] Rohde and Schwarz Receiver, Model, ESHS-30
[X] Rohde and Schwarz Model Receiver, ESVS-30
[] EMCO, BiConnical Antenna, Model 3108
[] EMCO, Log Periodic Antenna, Model 3146
[X] Chase, BiLog Antenna, Model 1121
[X] Mini Circuits Pre-Amp
[] Not Applicable

Results

Radiated Emissions (Electric Field) 30 MHz - 1000 MHz

The requirements are [X] PASS [] FAIL [] N/A

Min. limit margin 14.32 dB at 100.0 MHz

Max. limit exceeding ____ dB at ____ MHz

Remarks: Reference Section 4 for Data Sheets

TEST REPORT

Remarks: Reference Section 4 for Data Sheets

*See Part 4.5 for a discussion of the specification limits applied to the emission data above 1 GHz.

**The minimum occupied bandwidth was measured at three frequencies within the frequency hopping range of the transmitter: 907.0 MHz, 911.62 MHz and 916.71 MHz which represent the low, mid and high frequencies of the operating band.

Part 4.4 Radiated Emissions Data, 1 GHz to 10 GHz**Notes:**

The third column below contains alpha characters which pertain to the type of measurements made. The following are the definitions for those characters: q = Quasi Peak, m = Maximized (cable, rotation and antenna height), s = scanned but no data taken, a = average and p = peak. For the first character in column four, a '-' indicates that value is below the limit while an '**' indicates that value is above the limit

If the list is sorted using "I-sort", then quasi-peak and average levels are weighted higher than peak levels and are moved to the front of the scan list.

The following keys help to better understand the data:

TT: Turntable position in degrees

Hght: Height of antenna in centimeters

Az: Azimuth, V = Vertical, H= Horizontal

Part 4.9 Pulse Train Timing Diagram

Duty Cycle Calculation:

Total Number of Pulses = 164

Pulse Width = 20 uSec

Pulse Train Duration (including blanking intervals) > 100 mSec

$$\text{Duty Cycle} = \frac{164 * 0.02}{100} = 0.032 = 3.2\%$$

Average Power Correction Factor = $20 * \text{Log}(0.032) = -29.7 \text{ dB}$
 maximum correction allowed = -20 dB

9170.0000	Noise Floor	20	-	54.00	-

Note: Emissions below 1 GHz were measured with a CISPR quasi peak detector. Emissions above 1 GHz were measured with a peak detector and average levels were calculated per Appendix I of ANSI C63.4 1992.

Because the fundamental frequency levels were not measured with a peak detector, it was not possible to calculate the out-of-band limit for spurious emissions above 1 GHz per CFR 47 Part 15.247 (c). Limits were taken from Part 15.209(a) as the worse case requirements.

Part 4.3 Radiated Emissions Data, 30 MHz to 1000 MHz**Notes:**

The third column below contains alpha characters which pertain to the type of measurements made. The following are the definitions for those characters: q = Quasi Peak, m = Maximized (cable, rotation and antenna height), s = scanned but no data taken, and a = average. For the first character in column four, a '-' indicates that value is below the limit while an '*' indicates that value is above the limit

If the list is sorted using "I-sort", then quasi-peak and average levels are weighted higher than peak levels and are moved to the front of the scan list.

The following keys help to better understand the data:

TT: Turntable position in degrees

Hght: Height of antenna in centimeters

Az: Azimuth, V = Vertical, H= Horizontal

TEST REPORT

Part 2.3 FCC Part 15 Subpart C –Intentional Radiated Fields

Measurement or *radiated emissions (electric field)* in the frequency range of 30 MHz-10,000 MHz were tested in a horizontal and vertical polarization as indicated below:

Environmental conditions in the lab:

Date(s) of Test: mm/dd/yy 2/15/99
Temperature: 69°F
Rel. Humidity 15%
Test Voltage [X]120 V, 60Hz [] ____ V, Hz

Test location:

[X] Criterion Technology Open Area Test Site
[] Pre-Scan In Semi-Anechoic Chamber
[] Not applicable

Test distance (antenna - EUT):

[] 1 meter [] Preliminary Measurement [] Final Measurement
[X] 3 meters [X] Preliminary Measurement [X] Final Measurement
[] 10 meters [] Preliminary Measurement [] Final Measurement
[] 30 meters [] Preliminary Measurement [] Final Measurement
[] Not applicable

Test instruments:

	<u>Calibration Due Date</u>
[X] Hewlett Packard Spectrum Analyzer, Model 8566B	7/12/99
[] Hewlett Packard Quasi Peak Adapter, Model 85650A	12/17/99
[] Hewlett Packard Tracking Generator, Model 85645A	5/22/99
[] Rohde and Schwarz Receiver, Model, ESHS-30	8/26/99
[] Rohde and Schwarz Model Receiver, ESVS-30	9/1/99
[] Chase, BiLog Antenna, Model 1121	5/30/99
[X] Antenna Research, Model 1181A (sn: 1056)	4/15/99
[X] Amp3 and High Freq. Cable Set	9/30/99
[] Mini Circuits Pre-Amp, Amp 2	6/2/99
[] EMCO Loop Antenna, Model 6502	10/7/99
[] Not Applicable	

Test accessories:

[X] Other HP 8445B Preselector Filter 2/14/00
[] Not applicable

Results

Radiated Emissions (Electric Field) 30 MHz - 10,000 MHz

The requirements are [X] PASS [] FAIL [] N/A
Min. limit margin 5.09 dB at 1814.2 MHz*
Max. limit exceeding ____ dB at ____ MHz

Bandwidth (CFR 47 Part 15.247 (a)(1)(i))

Minimum Hopping Channel 20 dB Bandwidth: 200 KHz at 911.62 MHz **

TEST REPORT

Part 2.1 FCC Part 15 Subpart B - Conducted Emissions

Measurement of *conducted emissions* was performed as indicated below:

Environmental conditions in the lab:

Date(s) of Test: mm/dd/yy 2/15/99
Temperature: 70°F
Rel. Humidity 15%
Test Voltage [X]120 V, 60Hz [] ____ V, Hz

Test location:

[] Criterion OATS Test Area
[X] Criterion Shield Room
[] Not applicable

Test instruments:

Calibration Due Date

[X]	Hewlett Packard Spectrum Analyzer, Model 8566B	7/12/99
[]	Hewlett Packard Quasi Peak Adapter, Model 85650A	12/17/99
[X]	Rohde and Schwarz Receiver, Model, ESHS-30	8/26/99
[]	Rohde and Schwarz Model Receiver, ESVS-30	9/1/99
[]	Rohde and Schwarz Model LISN, ESH2-Z5	7/24/99
[]	Not applicable	

Test results:

Conducted Emission: 450 kHz - 30 MHz

The requirements are [X] PASS [] FAIL [] N/A
Min. limit margin > 25 dB at 0.590 MHz
Max. limit exceeding ____ dB at ____ MHz

TEST REPORT

TEST REPORT

Disclaimers:

This report is the confidential property of the client. For the protection of our clients and ourselves, extracts from this test report cannot be produced without prior written approval from Criterion Technology. Reproduction of the complete report can be performed at the client's discretion.

The client is aware that Criterion Technology has performed testing in accordance with the applicable standard(s). Test data is accurate within ANSI uncertainty parameters for Emissions testing, unless a specific level of accuracy has been defined in writing prior to testing, by Criterion Technology and the client.

Criterion Technology reports apply only to the specific Equipment Under Test (EUT) sample(s) tested under the test conditions described in this report. If the manufacturer intends to use this report as a document demonstrating compliance of this model, additional models of this product must have electrical and mechanical characteristics identical to the device tested for this report. Criterion Technology shall have no liability for any deductions, inferences, or generalizations drawn by the client or others from Criterion Technology issued reports.

Total liability is limited to the amount invoiced for the testing of this EUT and the contents of this report are not warranted.

Compliance with the appropriate governmental standards is the responsibility of the manufacturer. Any questions regarding this report should be directed to:

Laboratory Director
Criterion Technology
