RE: Letter defining design variants for Class II Permissive Change
Huawei Technologies Co., Ltd. (FCC ID: QISCM70-C)

Dear Sir or Madam:

Please find below a description submitted by Huawei Technologies Co., Ltd. outlining the design changes to the Bluetooth earphone, which required the submittal of a Class II Permissive Change.

The Bluetooth earphone (CM70-C) is a neckband bluetooth headset. The original design supports Bluetooth 5.0 dual mode and high-performance cortex-M4F for wireless audio and voice application and optimized for FWS (Full Wireless Stereo) application.

Due to the BLE model is never use for any usage scenario, so we decide to delete BLE function of BT 5.0 dual mode. There are no any other hardware changes except to shielding BLE function through the software, only remains original BDR & EDR function as BT 5.0 single model, so the original DSS portion test results are still applicable to the new product.

Please feel free to contact me with my questions.

Sincerely.
