

CM17A RF COMPUTER INTERFACE OPERATIONAL DESCRIPTION

The CM17A RF Computer Interface attaches in-line with a serial 9 Pin D port on any P.C. The device operates on 5VDC derived from the RS-232 line of the Host PC. Special software installed in the PC enables the CM17A to activate other X-10 home security devices via its 310 MHz pulsed RF output. Because the device connects to a PC, FCC Part 15, Subpart B, Declaration of Conformity testing was performed and is covered in a separate report. (Retlif Testing Laboratories Report Number R-7977-2)
