1.3 Product Description

Corning's BWSTM platform 1.0 is the first fully-digital, end-to-end in-building cellular solution, for medium size venues.

Corning's Low Power Radio (LPR) units are the end-point antennas connected by optical cable to the BWS system Digital Router Unit (DRU) (distribution/routing of RF samples via CPRI stream), and to the system Power Supply Unit (PSU) for power.

LPR is the first release of Corning's fully-digital radio remote unit, providing plug-and-play, cost-effective processing, minimizing power loss and noise.

1.4 Test Methodology

Both conducted and radiated testing were performed according to the procedures in KDB 935210 D05 v01r03 April 2019 and ANSI/TIA-603-E-2016. Radiated testing was performed at an antenna to EUT distance of 3 meters.

1.5 Test Facility

Both conducted and radiated emissions tests were performed at I.T.L.'s testing facility in Lod, Israel. I.T.L.'s EMC Laboratory is accredited by A2LA, certificate No. 1152.01 and its FCC Designation Number is IL1005.

2. System Test Configuration

2.1 Justification

- 2.1.1 The test setup was configured to closely resemble the standard installation.
- 2.1.2 The EUT consists of the LPR (Low-Power Remote Module) which is connected with the head-end ICAN equipment (BBU and DRU) using fiber optic cable.
- 2.1.3 The RF source signals are represented in the setup by BBU unit.
- 2.1.4 An "Exercise" SW on the computer was used to enable/disable transmission of the EUT, while the EUT output was connected to the spectrum analyzer.
- 2.1.5 The system was tested under maximum gain conditions.
- 2.1.6 Only peak power testing was done on the both ports, all other testing was performed 1 port (see customer declaration on following page regarding the identical ports).
- 2.1.7 Testing was performed on the following configuration:

| Frequency Range (MHz) | | |
|-----------------------|---------------|------------|
| Service/Band | Downlink (DL) | Technology |
| WCS | 2350-2360 | LTE |

2.2 EUT Exercise Software

vHCM SW ver. 1.0 used for commands delivery. These commands are used to enable/disable the EUT transmission.

EUT Embedded SW versions are:

DRU ver dru_d719_10_25

LPR ver LPR_D803_01.63

2.3 Special Accessories

No special accessories were needed in order to achieve compliance.

2.4 Equipment Modifications

No modifications were needed in order to achieve compliance.

5.1 Test Specification

FCC, Part 27, Subpart C, Section 27.50(a)(1)(A)

5.2 Test Procedure

(Temperature (22°C)/ Humidity (40%RH))

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (loss=31.7 dB). The E.U.T. RF output was modulated. Special attention was taken to prevent Spectrum Analyzer RF input overload. The Spectrum Analyzer was set to 1MHz RBW. The output power level was measured at each modulation.

In the next step RBW was set to 5MHz, power output level was measured at each modulation and compared to the limit.

5.3 Test Limit

Average PSD in any 1 MHz must not exceed 400 Watts (56dBm) and in any 5MHz, must not exceed 2000 Watts (63dBm).

7.2 Test Procedure

(Temperature (22°C)/ Humidity (40%RH))

The E.U.T. was set to the applicable test frequency with modulation. The E.U.T. antenna terminal was connected to the spectrum analyzer through appropriate coaxial cable. The OBW function (99%) was used for this evaluation. RBW was set to 100 kHz.

Occupied bandwidth measured was repeated for each modulation.
