RE: LG Electronics Inc.

FCC ID: BEJ50PY2DRUA and BEJ50PX4DUB

After a review of the submitted information, I have a few comments on the above referenced Application.

1) Regarding the previous comment:

It appears that ferrites were present on the RGB and DVI cables. Therefore these are expected to be supplied to the end user with the device. However the information on page 12 and 21 suggest these cables will not be provided. Additionally this same information applies to application BEJ50PY2DRUA as well. Please address.

You responded with:

I uploaded revised manuals for BEJ50PX4DUB, BEJ50PY2DRUA.

-See 2 page manual-1(new), There is cables statement for DVI/RGB.

Placing the statement in the manual is not sufficient. The manufacturer must provide these cables since they required ferrites. The FCC's concern is that these are common cables which the user can simply buy from any store, and typically the cable will not include ferrites, and if it does, likely is not the same ferrite as tested. The FCC has always felt that the burden of compliance is not that of the consumer/buyer/reseller, but instead the manufacturer (applicant issued grant). Since these cables are different than the consumer will buy and require ferrites for compliance, the manufacturer is responsible for providing to the buyer with the device. Additionally, please note that pages in the manual (12 and 23 of the new manual provided) clearly show they cables are not included.

Optionally, the device may be tested/modified to comply without requiring external cables with ferrites. In this case, since no special cables are required for compliance (no ferrites present, etc.), the cables do not need to be provided to the consumer with the device.

For further details of this, please consult Part 15.27.
