Subject: Elkay Enhanced Representation Justification

FCC ID: **2AC8R-NFC1**

To Whom It May Concern:

Elkay's **Enhanced EZH2O Bottle Filling Station & Bi-Level Cooler combination** test unit, model # **LZSTL8WSLP** represents all other models in this product family series since it contains all possible analog and digital electrical components; and has highest potential risk of radio emissions and interference.

More specifically, like all Bi-Level models, the test unit model has the NFC Board (the only radio) mounted in the adjacent empty/dummy Cooler with a longer communication cable to the Main Control board. As such, this radio and its communication cable are most exposed and vulnerable to emit and interfere.

So for these reasons, test unit model # **LZSTL8WSLP** is the best representative model of the following variations available in this product family series:

1. **Single or Bi-level** (two) Cooler with top mounted Botte Filler combinations
2. **Refrigerated or Non-Refrigerated**
3. **Flexible Molded Guard or Vandal Resistant** bubbler
4. **Stainless Steel or Vinyl Coated** cold-rolled steel bottom Shroud

And as a result, this equates to representing all 24 possible model combinations.

Best regards,
