

Maximum Permissible Exposure Report

Prepared for	: AUTHOR-ALARM d.o.o.
Address	: Koroška ulica 26, 1000 Ljubljana, Slovenija
Prepared by	: Shenzhen LCS Compliance Testing Laboratory Ltd.
Address	: 101, 201 Bldg A & 301 Bldg C, Juji Industrial Park Yabianxueziwei,
	Shajing Street, Baoan District, Shenzhen, 518000, China
Tel	: (+86)755-82591330
Fax	: (+86)755-82591332
Web	: www.LCS-cert.com
Mail	: webmaster@LCS-cert.com
Date of receipt of test sample	: November 14, 2024
Number of tested samples	: 2
Sample No.	: A241025078-1, A241025078-2
Serial number	: Prototype
Date of Test	: November 14, 2024 ~ December 04, 2024
Date of Report	: December 05, 2024

Product Information			
EUT	: Anti-theft device	- The rea	- Lee Loo
Test Model	: AUTHOR KVANT 2		
Additional Model No.	: KVANT 231, KVANT LF	, Al-0007e, Al-0009e, Al-0	0013e, Al-0015e
Model Declaration	: PCB board, structure an additional models were	id internal of these model(tested.	s) are the same, So no
Ratings	: Input: DC 12V, 10mA		
Hardware Version	: /		
Software Version	: /	A-1111月代	12-311月21日
Bluetooth			
Frequency Range	: 2402MHz~2480MHz		The two
Channel Number	: 40 channels for Bluetoo	th V5.0 (DTS)	
Channel Spacing	: 2MHz for Bluetooth V5.0) (DTS)	
Modulation Type	: GFSK for Bluetooth V5.0	0 (DTS)	
Bluetooth Version	: V5.0		
Antenna Description	: Internal Antenna, 1.69d	Bi(Max.)	
Exposure category	: General population/unco	ontrolled environment	
EUT Type	: Production Unit	一场到限份	111-24
Device Type	: Mobile Devices	Testing Lau	LI MAR

2. Evaluation Method

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is \leq 1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

3. Limit

3. 1 Refer Evaluation Method

<u>ANSI C95.1–2019</u>: IEEE Standard for Safety Levels with Respect to Human Exposure to Electric, Magnetic, and Electromagnetic Fields, 0 Hz to 300 GHz

FCC KDB publication 447498 D01 General 1 RF Exposure Guidance v06: Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies.

FCC CFR 47 part1 1.1310: Radiofrequency radiation exposure limits.

FCC CFR 47 part2 2.1091: Radiofrequency radiation exposure evaluation: mobile devices.

NVLAP Accreditation Code is 600167-0.

FCC Designation Number is CN5024.

CAB identifier is CN0071.

CNAS Registration Number is L4595.

ISED Designation Number is 9642A.

4. MPE Calculation Method

Predication of MPE limit at a given distance Equation from page 18 of OET Bulletin 65, Edition 97-01

S=PG/4πR²

Where: S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator R=distance to the center of radiation of the antenna

5. Antenna Information

EUT can only use antennas certificated as follows provided by manufacturer;

8	Internal/External Identification	Antenna type and antenna number	Operate frequency band	Maximum antenna gain	Notes
1	Internal	Internal Antenna	2400-2500MHz	1.69dBi	BT Antenna

6. Conducted Power

8. Measurement Results

8.1 Standalone MPE Evaluation

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r =20cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

WSS . cs		MSG			M. S. G. 195	

Remark:

1. Output power including tune-up tolerance;

2. Output power was adjust to duty cycle at 100% if measured duty cycle less than 98%;

3. MPE evaluate distance is 20cm from user manual provide by manufacturer.

Shenzhen LCS Compliance Testing Laboratory Ltd. Add: 101, 201 Bldg Å & 301 Bldg Č, Juji Industrial Park Yabianxueziwei, Shajing Street, Baoan District, Shenzhen, 518000, China Tel: +(86) 0755-82591330 | E-mail: webmaster@lcs-cert.com | Web: www.lcs-cert.com Scan code to check authenticity

8.2 Simultaneous Transmission MPE Evaluation

The EUT equiped with one antenna. So no need consider simultaneous transmission.

9. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
