FAQ

Fail to start the watch
·Press the power switch for more than 3s.
·Maybe the battery level is too low. Please charge the battery timely.

The blueteeth is cannot be connected
·Please restart the watch and connect again.
·Please restart the mobile phone blueteeth and connect again.
·Do not connect your mobile phone to other blueteeth device at the same time.

The measurement of heart rate/blood oxygen is inaccurate

·General, it is caused by poor contact between the watch sensor and human body.
·Please ensure that the sensor contacts the wrist well during measurement.
·Please keep your body still and the watch attached to your wrist tightly during measurement.
·For people who have dark skin color and have thick hair on the arm, please open intensified measurement through [device>intensified measurement] on the App.

Sleep data is not accurate enough

·Sleep monitoring simulates the status of natural sleep and getting up of human, and you should wear it as usual.
·If you sleep too late or you do not wear the watch until you go to sleep, there may be some error.
·It does not monitor the sleep data during daytime. The default time for sleep monitoring is from 9:30 in the evening to 12:00 at noon on the next day.

※ For more frequently asked questions, please view [My>FAQ] on the App.
