FCC RF Exposure Evaluation

1. Product Information

Product name	Floodlight Camera					
Test Model	BDB60SX-3	BDB60SX-3				
Power Supply	Input: 100-240V~, 50/60Hz, 0.6A, 5	55W				
Hardware Version	/					
Software Version	1					
Frequency Range	2412MHz ~ 2462MHz	一部位調問的				
Channel Spacing	5MHz	LCS Testing				
Channel Number	11 Channels for 20MHz bandwidth (2412~2462MHz)					
Modulation Type	IEEE 802.11b: DSSS (CCK, DQPS	IEEE 802.11b: DSSS (CCK, DQPSK, DBPSK)				
	IEEE 802.11g: OFDM (64QAM, 16QAM, QPSK, BPSK)					
	IEEE 802.11n: OFDM (64QAM, 160	QAM, QPSK, BPSK)				
Antenna Description	FPC Antenna, 1.65dBi(max.)					
Exposure category	General population/uncontrolled en	General population/uncontrolled environment				
EUT Type	Production Unit	and the				
Device Type	Mobile Devices	and hab				

2. Evaluation Method

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is ≤ 1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

4. MPE Calculation Method

Predication of MPE limit at a given distance Equation from page 18 of OET Bulletin 65, Edition 97-01

S=PG/4πR²

Where: S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator R=distance to the center of radiation of the antenna

5. Antenna Information

EUT can only use antennas certificated as follows provided by manufacturer;

Internal Identification	····· · · · · · · · · · · · · · · · ·		Maximum antenna gain	Note	
Antenna	FPC Antenna	2412MHz-2462MHz	1.65dBi(Max.)	WIFI Antenna

8. Measurement Results

8.1 Standalone MPE

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r =20cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

Modulation Type	Output power		Antenna Gain	Antenna Gain	MPE	MPE Limits
	dBm	mW	(dBi)	(linear)	(mW/cm2)	(mW/cm2)
IEEE 802.11b	16.0	39.8107	1.65	1.4622	0.0116	1.0000
IEEE 802.11g	15.0	31.6228	1.65	1.4622	0.0092	1.0000
IEEE 802.11n HT20	15.0	31.6228	1.65	1.4622	0.0092	1.0000

Remark:

1. Output power including tune-up tolerance;

2. MPE evaluate distance is 20cm from user manual provide by manufacturer;

8.2 Simultaneous Transmission MPE

Not Applicable

9. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
