

Toshiba TEC Corporation

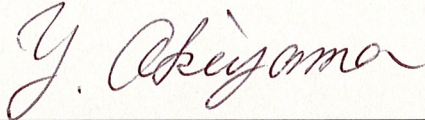

Subject: Declaration of Identity

The herewith information in provision of the antenna variant in substantiate for the permissive change of the module for FCC and ISSED.

New antenna has same gain with respect to the original antenna, thus the original MPE rf exposure assessment remains representative.

As the antenna gain (-14 dBi) is significantly lower than 6dBi, the power limits(30dbm) remain unchanged and there is no need for repeating power measurements.

SAW filter is pin-for-pin compatible with same specifications as the previous filter.
The operation environment is 85deg while the previous is 65deg.
