

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup*	 A photograph showing a conducted emission test setup. On a light-colored wooden table, there is a spectrum analyzer with a red probe connected to it. Below the table, a power supply unit is connected to the system. To the right, a white board with various electronic components and wires is visible.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing a radiation emission test setup. A yellow test chamber is placed on a circular turntable inside an anechoic chamber. The chamber walls are covered with white, square-shaped absorbers. A metal frame stands around the turntable, and a yellow and black striped caution tape is visible on the floor.

Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white, square-shaped anechoic tiles. A yellow, rectangular test fixture is mounted on a circular turntable in the center of the chamber. In the foreground, several vertical metal rods are visible, likely part of a probe stand.
Radiation Emission Test Setup (1GHz to 18GHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white, square-shaped anechoic tiles. A yellow, rectangular test fixture is mounted on a circular turntable in the center of the chamber. In the foreground, a red, curved object (possibly a probe or antenna) is visible, and a blue, pointed object (possibly a probe or antenna) is visible on the floor.

**Radiation Emission Test
Setup (Above 18GHz)**

*** Means' only test and setup for PART 15C .**
