ATTN.: Reviewing Engineer

FCC ID: 2BLES-GS0943

Models: GLOBYSGNG3 Full version and Basic version

We hereby request Family Certification for the above-mentioned Models based on them being electrically, and physically identical apart from model name/number.

GLOBYSGNG3 has been designed in order to be assembled during the manufacturing process with or without some “optional” circuitry, not related to metrological and/or legally relevant features and not related to communication module part.

The following picture, show a view of GLOBYSGNG3 in “full configuration” (all optional circuitry mounted):

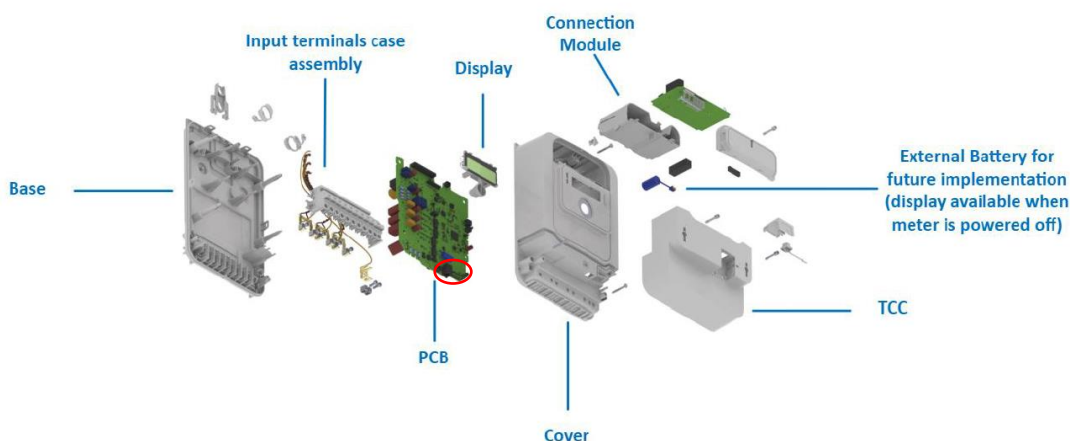

Figure 1 - GLOBYSGNG3 Full Version exploded view

Gridspertise Srl

Sede legale: 00198 Roma, Via Ombrone 2
Registro Imprese di Roma
Codice Fiscale e Partita IVA 16073691004 RM 1632822
Capitale Sociale 7.500.000 i.v.

The GPIO board and the RS485 connector (circled in red) are optional items. If these two components are not mounted, the meter is defined as the "basic version".

It is possible to apply the same "model" to both meter configurations since the optional circuits are mounted only on the electronic boards of host meter and do not affect the communication compartment in any way.

There is a QR code on the GLOBYSGNG3 product label (meter cover). The type of meter configuration is stored inside the QR code in the "Device ID" information (8 bytes). These 8 bytes allow to the operator to understand internal configuration of the meter by scanning the QR code.

The meter manufacturing process is supervised and certified by the European Measuring Instruments Directive.
