Re: Change Letter

This letter describes the changes to the Globalstar Analog Fixed User Terminal (AFUT). The change is to incorporate a new antenna that is external to the phone, and therefore no changes to the phone itself have been made. The new antenna is manufactured by ANTCOM Corporation of Torrance, CA and is a circularly polarized helix design with a passive transmit antenna with a maximum gain of 2.3 dBic. The current antenna has a maximum gain of 6.5 dBic. The reason for the new antenna is to improve the coverage of the modem when the Globalstar satellites are near the horizon.

Sincerely,

A handwritten signature in black ink, appearing to be 'Paul Jayne', written over a large, loopy, oval-shaped scribble.
