# FCC ID:2AY5M-ESLEPD

## Portable device

According to §15.247(e)(i) and §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

According to KDB447498 D01 General RF Exposure Guidance V06

The 1-g SAR and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]· $[\sqrt{f(GHZ)}] \le 3.0$  for 1-g SAR and  $\le 7.5$  for 10-g extremity SAR, where:

- f(GHZ) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison

When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

## 2.4GHz:

| Modulation | Channel<br>Freq.<br>(GHz) | Conduct<br>ed<br>power<br>(dBm) | Conducte<br>d power<br>(mW) | Tune-up<br>power<br>(dBm) | tune-up<br>power<br>(dBm) | Max<br>tune-up<br>power<br>(mW) | Distance<br>(mm) | calculatio | SAR<br>Exclusion<br>threshold | SAR test exclusion |
|------------|---------------------------|---------------------------------|-----------------------------|---------------------------|---------------------------|---------------------------------|------------------|------------|-------------------------------|--------------------|
| GFSK       | 2.402                     | 7.3                             | 5.37                        | 7±1                       | 8.00                      | 6.31                            | <5               | 1.95576    | 3.00                          | YES                |

Note:dbm=dbuv/m-95.2=104.17-95.2=8.97dBm(EIRP), so the conduct peak power= 8.97-1.67=7.3dBm

# NFC:

| Modulation | Channel<br>Freq.<br>(GHz) | Conduct<br>ed<br>power<br>(dBm) | Conducte<br>d power<br>(mW) | Tune-up<br>power<br>(dBm) | Max<br>tune-up<br>power<br>(dBm) | Max<br>tune-up<br>power<br>(mW) | Distance<br>(mm) | calculatio | SAR<br>Exclusion<br>threshold | SAR test exclusion |
|------------|---------------------------|---------------------------------|-----------------------------|---------------------------|----------------------------------|---------------------------------|------------------|------------|-------------------------------|--------------------|
| ASK        | 0.01356                   | 1.5                             | 1.41                        | 1±1                       | 2.00                             | 1.58                            | <5               | 0.03691    | 3.00                          | YES                |

Note: dbm=dbuv/m-95.2-2.15=100.52-95.2-2.15=3.17dBm(ERP), so the conduct peak power=3.17-1.67=1.5dBm

#### Conclusion:

2.4GHz+NFC supported simultaneous transmission:

2.4GHz+NFC :  $\Sigma$  MPE Ratio = 1.95576/3+0.03691/3=0.664 ≤ FCC Limit 3.0 for 1g SAR.
