

4. It is not clear from the ID Label & Location exhibit if the label is located on the exterior of the EUT or not- please clarify. In addition, please also confirm that the label will be permanently attached to the EUT, and briefly indicate how this is accomplished (e.g., thru the use of permanent epoxy).

The label is located on the exterior of the product and is visible to the user prior to installation. The label is permanently attached to the EUT via non-soluble permanent adhesive.

7. Please provide a description of the EUT's antenna, and address compliance with Section 15.203.

The EUT's antenna is a PCB Trace (as noted in the test report) and thus complies with 15.203.
