FCC ID: SW8WD6050Z2 Report No.: T160113D06-RP1-1

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] $*\cdot[\sqrt{f(GHz)}] \le 3.0$

The tune-up power is -2 dBm +/- 2dB, therefore the highest tune-up power is -2.8 dBm (0.52 mW) @ 908 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

So, (0.5mW / 5mm) * (0.908GHz ^0.5)= 0.1

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * $[\sqrt{f(GHz)}] = 0.1 < 3.0$

Therefore, standalone SAR measurements are not required for both head and body.
