GENERAL REMARKS

This report applies only to the sample(s) tested. It is the manufacturer's responsibility to ensure the additional production units of this product are manufactured with identical electrical and mechanical components. The manufacturer is solely responsible for any modifications to the product that could result in non-compliance with the relevant regulations.

This report shall not be reproduced except in full without the written approval of Nemko.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Nemko Group accepts no responsibility for damage suffered by any third party because of decisions made or actions based on this report.

Opinions expressed within this report regarding general assessments and qualifications for PASS or FAIL to the standards limits and requirements, are not part of the current accreditation. Neither are opinions expressed regarding model variants covered by the testing of this report.

CALIBRATION

All instruments used in the tests given in this test report are calibrated and traceable to national or international standards. Between calibrations all test set-ups are controlled and verified on a regular basis by periodic checks to ensure, with 95% confidence, that the instruments remain within the calibrated levels.

MEASUREMENT UNCERTAINTY

Measurement uncertainties are calculated or considered for all instruments and instrument set-ups used during these tests. Uncertainty figures are found in a separate clause in this report.

1 INFORMATION

1.1 Tested Item

| Name | Audio Enhancement |
|----------------------------------|--|
| Model name | K-STM24 |
| FCC ID | ACJ9TAK-STM24 |
| ISED ID | 23335-KSTM24 |
| Serial number | Conducted Sample: PRJ00399240024 Radiated Sample: PRJ00399240023 Monitoring Sample: PRJ00399240022 |
| Hardware identity and/or version | PULB1096ZA-GL |
| Software identity and/or version | Ver1.00R00 |
| Frequency Range | 1921.536 – 1928.448 MHz |
| Number of Channels | 5 RF Channels, 5x12 = 60 TDMA Duplex Channels |
| Type of Modulation | Digital (Gaussian Frequency Shift Keying) |
| Conducted Output Power | 3.5 mW (Peak) |
| Antenna Connector | None |
| Number of Antennas | 1 |
| Antenna Diversity | No |
| Power Supply | Secondary Battery (Li-Ion Battery XD-5001, 3.7V, 700mAh) |
| Interfaces | USB-C port for charging |

1.2 Description of Tested Device

The EUT is a DECT Handset and is an initiating device as described in ANSI C63.17 and is designed to operate together with a DECT Base Station, which is the responding device.

1.3 Test Conditions

| Temperature: | 20 – 23 °C |
|----------------------|------------|
| Relative humidity: | 30 – 50 % |
| Normal test voltage: | 3.7 V DC |

The values are the limit registered during the test period.

All tests were performed with a fully charged battery.

1.4 Supporting Equipment

| Description | Brand Name | Model No | Serial Number | Comment |
|------------------|-------------------|-----------------|----------------|---|
| USB Charger | Audio Enhancement | 360539 Vivid2.4 | PRJ00399240017 | For Conducted Emissions test |
| Wireless Antenna | Audio Enhancement | K-SRC14 | PRJ00399240010 | Companion Device for Conducted Emissions test |
| Wireless Antenna | Audio Enhancement | K-SRC14 | PRJ00399240009 | Companion Device for Monitoring tests |
| AC Adaptor | Panasonic | PGLV1006 | PRJ00399240026 | Used to Power Wireless Antenna |
| Conversion Box | Panasonic | 2FA1SR102E | PRJ00399240019 | Used between AC Adaptor and Wireless Antenna |

The supporting equipment listed above were used for one or more tests.

1.5 Test Engineers

Frode Sveinsen

1.6 Digital Modulation Techniques

The EUT uses Multi Carrier / Time Division Multiple Access / Time Division Duplex and Digital GFSK modulation. For further details see the operational description provided by the applicant.

Requirement, FCC 15.319(b), RSS-213 Issue 3, clause 5.1:

All transmissions must use only digital modulation techniques.

1.7 Labeling Requirements

See separate documents showing the label design and the placement of the label on the EUT.

Requirements FCC 15.19

The FCC Identifier shall be displayed on the label, and the device(s) shall bear the following statement in a conspicuous location on the device or in the user manual if the device is too small:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

The label itself shall be of a permanent type, not a paper label, and shall last the lifetime of the equipment.

1.8 Antenna Requirement

| Does the EUT have detachable antenna(s)? | ⊠ NO |
|--|------|
| If detachable, is the antenna connector(s) non-standard? | |
| | |

The tested equipment has only integral antennas. The conducted tests were performed on a sample with a temporary antenna connector.

Requirement: FCC 15.203, 15.204, 15.317, RSS-GEN Issue 5, clause 6.8

1.9 Channel Frequencies

| UPCS CHANNEL | FREQUENCY (MHz) |
|-----------------|-----------------|
| Upper Band Edge | 1930.000 |
| 0 (Highest) | 1928.448 |
| 1 | 1926.720 |
| 2 | 1924.992 |
| 3 | 1923.264 |
| 4 (Lowest) | 1921.536 |
| Lower Band Edge | 1920.000 |

Requirement: FCC 15.303, RSS-213 Issue 3, clause 5.1:

Within 1920 -1930 MHz band for isochronous devices.

1.10 Standards Used

| Name | Description |
|------------------------------|---|
| FCC Part 15, Subpart D | Isochronous UPCS Device, 1920-1930 MHz |
| ISED Canada RSS-213, Issue 3 | 2 GHz License Exempt Personal Communications Services (LE-PCS) Devices |
| ISED Canada RSS-GEN, Issue 5 | General Requirements for Compliance of Radio Apparatus |
| ISED RSP-100, Issue 12 | Certification of Radio Apparatus and Broadcasting Equipment |
| ANSI C63.4-2014 | American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz |
| ANSI C63.17-2013 | American National Standard Methods Of Measurement Of The Electromagnetic And Operational Compatibility Of Unlicensed Personal Communications Services (UPCS) Devices |

1.11 Other Comments

The Monitoring and Time and Spectrum Window Access tests were performed with Test Set-Up 6 (Ref. clause 5). A clock signal from the Base Station was used to synchronize the Pulse Pattern Generator and the Spectrum Analyzer to the start of the DECT time window. The EUT was limited by administrative commands to operate on only two frequency carriers. For the tests where the EUT was required to operate on only one frequency carrier, one carrier was blocked by applying a CW interfering signal from RF Generator 3. The Pulse Pattern Generator was used to apply time synchronized interference to time windows where this was required.

Since the EUT was programmed to operate on only two RF carriers, it was only necessary with two RF generators for the monitoring tests, however a third generator was applied for the tests that required specific time slots to be blocked.

The tested EUT DECT transmits both Full Slots and Long slots. Long slot is an extended DECT slot that allows for higher bit rates.

This EUT supports Least Interfered Channel procedure (LIC), the Monitoring and Time and Spectrum Window Access tests were conducted as specified for EUTs that support LIC procedure.

All tests except Power-Line Conducted Emissions were performed in conducted mode with a temporary antenna connector.

2 TEST REPORT SUMMARY

2.1 General

The tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with FCC CFR47 Part 15D for Isochronous UPCS Devices and Industry Canada RSS-213 Issue 3 / RSS-GEN Issue 5.

All tests were conducted is accordance with ANSI C63.4-2014 and ANSI C63.17-2013.

All measurements are traceable to national standards.

A description of the test facility is on file with FCC and ISED.

3 TEST RESULTS

3.1 Power Line Conducted Emissions

FCC Part 15.207

ISED RSS-213 Issue 3, Clause 6.3

RSS-GEN Issue 5, Clause 7.2 / 8.8

| Measurement procedure: | ANSI C63.4-2014 using 50 $\mu\text{H}/\text{50}$ ohms LISN |
|------------------------|--|
| Test Results: | Complies |
| Measurement Data: | See attached plots |

Highest measured value (L1 and N):

| Frequency (MHz) | QuasiPeak (dBµV) | CAverage (dBµV) | Limit (dBµV) | Margin (dB) | Meas. Time (ms) | Bandwidth (kHz) | Line | Filter | Corr. (dB) |
|--------------------|---------------------|--------------------|-----------------|----------------|--------------------|--------------------|------|--------|---------------|
| 0.702000 | | 32.21 | 46.00 | 13.79 | 15000.0 | 9.000 | L1 | OFF | 9.6 |
| 0.702000 | 45.57 | | 56.00 | 10.43 | 15000.0 | 9.000 | L1 | OFF | 9.6 |
| 1.434000 | 36.81 | | 56.00 | 19.19 | 15000.0 | 9.000 | L1 | OFF | 9.7 |
| 3.938000 | 36.38 | | 56.00 | 19.62 | 15000.0 | 9.000 | L1 | OFF | 9.8 |

3.2 Automatic Discontinuation of Transmission

| Does the EUT transmit Control and Signal | ⊠ NO | |
|--|------|------------|
| TYPE OF EUT : | | ING DEVICE |

The following tests simulate the reaction of the EUT in case of either absence of information to transmit or operational failure after a connection with the companion device is established.

| Number | Test | EUT Reaction | Verdict |
|--------|-------------------------------------|--------------|---------|
| 1 | Power removed from EUT | С | Pass |
| 2 | Switch Off EUT | с | Pass |
| 3 | Hook-On by EUT | с | Pass |
| 4 | Power Removed from Companion Device | Α | Pass |
| 5 | Switch Off Companion Device | N/A | Pass |
| 6 | Hook-On by Companion Device | N/A | Pass |

A - Connection breakdown, Cease of all transmissions

B - Connection breakdown, EUT transmits control and signaling information

C - Connection breakdown, Companion Device transmits control and signaling information

N/A - Not Applicable (Companion Device does not have On/Off switch and cannot perform Hook-On)

Requirements, FCC 15.319(f), RSS-213 Issue 3, Clause 5.2:

The device shall automatically discontinue transmission in case of either absence of information to transmit or operational failure. These provisions are not intended to preclude transmission of control and signaling information or use of repetitive codes used by certain digital technologies to complete frame or burst intervals.

3.3 Peak Power Output

Test Method:

ANSI C63.17, clause 6.1.2.

Test Results: Complies

Measurement Data:

Maximum Conducted Output Power

| Channel No. | Frequency (MHz) | Maximum Conducted Output Power (dBm) | Maximum Conducted Output Power (mW) |
|-------------|--------------------|---|--|
| 4 | 1921.536 | 5.26 | 3.36 |
| 2 | 1924.992 | 5.43 | 3.49 |
| 0 | 1928.448 | 5.24 | 3.34 |

Limit:

Conducted: 100 µW x SQRT(B)where B is the measured Emission Bandwidth in HzFCC 15.319(c)(e):20.67 dBm (117 mW)ISED RSS-213, Issue 3:20.45 dBm (111 mW)The antenna gain is below 3 dBi, no reduction in transmit power is necessary.

Requirements,

FCC 15.319(c)(e):

Peak transmit power shall not exceed 100 microwatts multiplied by the square root of the emission bandwidth in Hertz.

RSS-213 Issue 3, clause 5.6:

Peak transmit power shall not exceed 100 microwatts multiplied by the square root of the occupied bandwidth in Hertz.

FCC 15.319(c)(e); RSS-213 Issue 3, clause 5.6:

The peak transmit power shall be reduced by the amount in decibels that the maximum directional gain of the antenna exceeds 3 dBi.

3.4 Emission Bandwidth *B*

Test Method:

ANSI C63.17, clause 6.1.3.

Test Results: Complies

Measurement Data:

| Channel No. | Frequency (MHz) | Emission Bandwidth <i>B</i> (MHz) |
|-------------|--------------------|--------------------------------------|
| 4 | 1921.536 | 1.39 |
| 0 | 1928.448 | 1.39 |

| Channel No. | Frequency (MHz) | Occupied Bandwidth (MHz) |
|-------------|--------------------|-----------------------------|
| 2 | 1924.992 | 1.24 |

Requirements, FCC 15.323(a), RSS-213 Issue 3, clause 5.5:

The Emission Bandwidth *B* shall be larger than 50 kHz and less than 2.5 MHz.

No requirements for 6 and 12 dB Bandwidth, these values are only used for testing Monitoring Bandwidth if the Simple Compliance test fails (ANSI C63.17, clause 7.4).

RSS-GEN Issue 5, clause 6.7:

Occupied Bandwidth (99%) is measured according to RSS-GEN Issue 5, clause 6.7. No requirement specified.

3.5 **Power Spectral Density**

Test Method:

ANSI C63.17, clause 6.1.5.

Test Results: Complies

Measurement Data:

| Channel No. | Frequency (MHz) | Power Spectral Density (dBm) |
|-------------|--------------------|---------------------------------|
| 4 | 1921.536 | -16.7 |
| 0 | 1928.448 | -16.8 |

Averaged over 1000 sweeps.

Requirements, FCC 15.319(d), RSS-213 Issue 3, clause 5.7

The Power Spectral Density shall be less than 3 mW (4.77 dBm) when averaged over at least 100 sweeps.

3.6 In-Band Unwanted Emissions, Conducted

Test Method:

ANSI C63.17, clause 6.1.6.1.

Test Results: Complies

Measurement Data:

See plots.

Requirements, FCC 15.323(d), RSS-213 Issue 3, clause 5.8.2:

 $B < f \le 2B$:at least 30 dB below max. permitted peak power $2B < f \le 3B$:at least 50 dB below max. permitted peak power $3B < f \le$ UPCS Band Edge : at least 60 dB below max. permitted peak power

3.7 Out-of-band Emissions, Conducted

Test Method:

ANSI C63.17, clause 6.1.6.2.

Test Results: Complies

Measurement Data:

| Carrier # | Frequency (MHz) | Emission Level (dBm) | Limit (dBm) | Margin (dB) |
|-----------|-----------------|----------------------|-------------|-------------|
| 04 | 1900.8 | -50.4 | -39.5 | 10.9 |
| 02 | 1904.2 | -51.1 | -39.5 | 11.6 |
| 00 | 1907.7 | -50.9 | -39.5 | 11.4 |

Total Emission Level is calculated using the method described in KDB 662911 D01 clause E) 3) a) (iii)

Requirements, FCC 15.323(d), RSS-213 Issue 3, clause 5.8.1:

| $f \le 1.25$ MHz outside UPCS band : | ≤ -9.5dBm |
|--|-------------|
| 1.25 MHz $\leq f \leq 2.5$ MHz outside UPCS band : | ≤ -29.5 dBm |
| $f \ge 2.5$ MHz outside UPCS band : | ≤ -39.5 dBm |

3.8 Carrier Frequency Stability

Test Method:

ANSI C63.17, clause 6.2.1.

Test Results: Complies

Measurement Data:

Long Term Frequency Stability is measured with the HP53310A Modulation Domain analyzer. The HP53310A is logged by a computer programmed to get new readings as fast as possible over the noted time period or number of readings. The peak-to-peak difference was recorded and the mean value and deviation in ppm was calculated.

The Carrier Frequency Stability over Power Supply Voltage and over Temperature is measured with a Frequency Domain Analyzer in histogram mode.

Carrier Frequency Stability over Time at Nominal Temperature

| Average Mean Carrier | Max. Diff. | Min. Diff. | Max. Dev. | Limit |
|----------------------|------------|------------|-----------|---------|
| Frequency (MHz) | (kHz) | (kHz) | (ppm) | |
| 1924.984521 | -6.769 | -8.794 | -0.7 | ±10 ppm |

Deviation ppm = ((Diff. - Mean Diff) / Mean Carrier Freq.) x 10⁶

Deviation (ppm) is calculated from 3000 readings.

Frequency Stability over Power Supply Voltage at Nominal Temperature

| Voltage | Measured Carrier Frequency (MHz) | Difference (kHz) | Deviation (ppm) | Limit |
|--------------------------|-------------------------------------|---------------------|--------------------|---------|
| V _{nom} | 1 | 0 | 0 | |
| 85% of V _{nom} | 1 | 1 | 1 | ±10 ppm |
| 115% of V _{nom} | 1 | 1 | 1 | |

Deviation ppm = ((Mean – Measured Frequency) / Mean) x 10⁶

This test does not apply for EUT that is powered from batteries.

Frequency Stability over Temperature

| Temperature | Measured Carrier Frequency (MHz) | Difference (kHz) | Deviation (ppm) | Limit |
|-------------|-------------------------------------|---------------------|--------------------|---------|
| T = +20 °C | 1924.9954 | 0 | 0 | |
| T = -20 °C | 1924.9965 | 1.1 | 0.6 | ±10 ppm |
| T = +50 °C | 1924.9886 | -6.8 | -3.5 | |

Deviation ppm = ((Mean – Measured Frequency) / Mean) x 10⁶

Ref. FCC 15.323(e), RSS-213 Issue 3, clause 5.3

3.9 Frame Repetition Stability

Test Method:

ANSI C63.17, clause 6.2.2.

Test Results: Complies

Measurement Data:

The envelope of the RF signal from the EUT is detected with a Crystal Detector and the mean and standard deviation of the frame repetition frequency is then gated over 100 frames and measured with a Frequency Domain Analyzer. The frame repetition stability is 3 times the standard deviation.

| Carrier Frequency (MHz) | Mean (Hz) | Standard Deviation (µHz) | Frame Repetition Stability (ppm) |
|----------------------------|-----------|--------------------------|-------------------------------------|
| 1924.992 | 100.000 | 3.248 | 0.097 |

Limit:

| Frame Repetition Stability ±10 ppm (TDMA) | | |
|---|----------------------------|----------------|
| | Frame Repetition Stability | ±10 ppm (TDMA) |

Ref. FCC 15.323(e), RSS-213 Issue 3, clause 5.2

3.10 Frame Period and Jitter

Test Method:

ANSI C63.17, clause 6.2.3.

Test Results: Complies

Measurement Data:

The envelope of the RF signal from the EUT is detected with a Crystal Detector and the frame period and jitter is measured with a Frequency Domain Analyzer over at least 100.000 frames.

| Carrier Frequency | Frame Period | Max Jitter | 3xStandard Deviation of |
|-------------------|--------------|------------|-------------------------|
| (MHz) | (ms) | (µs) | Jitter (μs) |
| 1924.992 | 10.000 | -0.104 | -0.096 |

Max Jitter = (1/ (Frame period + Pk-Pk/2)) - (1/Frame Period), when Pk-Pk and Frame Period are in Hz

3xSt.Dev.Jitter = 3x (1/(Frame Period + St.Dev) - 1/St.Dev) x 10⁶

Limit:

| Frame Period | 20 or 10 ms |
|--------------------------|-------------|
| Max Jitter | 25 µs |
| 3 times St.Dev of Jitter | 12.5 µs |

Ref. FCC 15.323(e), RSS-213 Issue 3, clause 5.2

3.11 Monitoring Threshold, Least Interfered Channel

Monitoring Threshold Limits:

Threshold Level:

 $T_L = -174 + 10 \log B + 30 + P_{MAX} - P_{EUT} (dBm)$

B is measured Emission Bandwidth (FCC 15.323) or Occupied Bandwidth (RSS-213 Issue 3) in Hz P_{MAX} is the power limit in dBm P_{EUT} is measured Transmitter Power in dBm

Calculated values:

| | FCC 15.323, RSS-213 Issue 3, clause 5.2 |
|-----------------------------------|---|
| Threshold Level (FCC 15.323) | -67.4 dBm |
| Threshold Level (RSS-213 Issue 3) | -68.1 dBm |

Least Interfered Channel Procedure (LIC) may only be used by systems with more than 20 duplex system access channels. Systems with less than 20 duplex system access channels are not allowed to transmit when interferer level is above Threshold Level.

Measurement Procedure:

| Test only when Least Interfered Channel Procedure is NOT used: | | |
|--|-----|----------------------------|
| Lower Threshold | N/A | The EUT uses LIC procedure |

Least Interfered Channel (LIC) Procedure Test, FCC 15.323(b), (c)(2) and (c)(5)

| ANSI C63.17 clause 7.3.2 ref. | Observation | Verdict |
|---|------------------------------|---------|
| b) f_1 at T _L + U _M + 7 dB, f_2 at T _L + U _M | Transmission always on f_2 | Pass |
| c) f_1 at T _L + U _M , f_2 at T _L + U _M +7 dB | Transmission always on f_I | Pass |
| d) f_1 at T _L + U _M + 1 dB, f_2 at T _L + U _M - 6 dB | Transmission always on f_2 | Pass |
| e) f_1 at T _L + U _M - 6 dB, f_2 at T _L + U _M + 1 dB | Transmission always on f_I | Pass |

Selected Channel Confirmation, FCC 15.323(c)(1) and (5)

| ANSI C63.17 clause 7.3.3 | Observation | Verdict |
|---|--|---------|
| b) Shall not transmit on f_i | EUT transmits on <i>f</i> ₂ | Pass |
| d) Shall not transmit on f ₂ | EUT transmits on f_I | Pass |

Limits:

| | FCC 15.323, RSS-213 Issue 3, clause 5.2 |
|---|---|
| Threshold Level + 6 dB margin (FCC 15.323) | -61.4 dBm |
| Threshold Level + 6 dB margin (RSS-213 Issue 3) | -62.1 dBm |

3.12 Threshold Monitoring Bandwidth

This test is only required if a dedicated monitoring receiver is used. However, if the test is not carried out the manufacturer shall declare and provide proper evidence that the monitoring is made through the radio receiver used for communication.

Measurement Procedure:

Simple Compliance Test, ANSI C63.17, clause 7.4.1

More Detailed Test, ANSI C63.17, clause 7.4.2

The test is passed if either the Simple Compliance Test or the More Detailed test is passed.

During this test the spectrum analyzer is observed visually to see if the EUT transmits or not.

Test Results:

| Test performed | Observation | Verdict |
|---|-------------|---------|
| Simple Compliance test, at ±30% of <i>B</i> | N/A | N/A |
| More Detailed Test, at -6 dB points | N/A | N/A |
| More Detailed Test, at -12 dB points | N/A | N/A |

The more detailed test must be pass at both the -6 and -12 dB points if the Simple Compliance test fails.

Comment: The manufacturer declares that the tested EUT uses the same receiver for monitoring and communication, this test is therefore not required.

Limits, FCC 15.323(c)(7), RSS-213 Issue 3, clause 5.2:

The monitoring system bandwidth must be equal to or greater than the emission bandwidth of the intended transmission.

3.13 Reaction Time and Monitoring Interval

Measurement Procedure

ANSI C63.17, clause 7.5

Test results:

By administrative commands and out-of-operating region interference, the EUT is restricted to operate on two RF carrier frequencies.

A CW interferer signal at a level T_L is applied on f_I and time-synchronized pulsed interference at a level $T_L + U_M dB$ is applied on f_2 . The level on f_2 was raised 6 dB for part d) with 35 µs pulses.

The pulses are synchronized with the EUT timeslots and applied centered within all timeslots.

For both tests the test is passed if the EUT transmits on f_i .

| Pulse Width, ref. to ANSI C63.17 clause 7.5 | Observation | Verdict |
|--|--|---------|
| c) > largest of 50 μs and 50*SQRT(1.25/ <i>B</i>) | EUT transmits on f_I | Pass |
| d) > largest of 35 μs and 35*SQRT(1.25/ <i>B</i>), and with interference level raised 6 dB | EUT transmits on <i>f</i> ₁ | Pass |

Comment: The test was performed with pulse lengths of 50 µs and 35 µs.

Limits, FCC 15.323(c)(1), (5) and (7), RSS-213 Issue 3, clause 5.2:

The maximum reaction time must be less than 50xSQRT (1.25/emission bandwidth in MHz) microseconds for signals at the applicable threshold level but shall not be required to be less than 50 μ s.

If a signal is detected that is 6 dB or more above the applicable threshold level, the maximum reaction time shall be 35xSQRT (1.25/emission bandwidth in MHz) microseconds but shall not be required to be less than 35 µs.

3.14 Time and Spectrum Window Access Procedure

This requirement is only for EUTs which transmit unacknowledged control and signaling information.

Measurement Procedure:

Timing for EUTs using control and signaling channel type transmissions: ANSI C63.17, clause 8.1

Test results:

| Access Criteria, ref. to ANSI C63.17 clause 8.1.1 | Observation | Verdict |
|--|-------------|---------|
| b) Check that the EUT transmits on the interference free time- slot | N/A | N/A |
| b) The EUT must terminate or pause in its repetitive transmission of the control and signalling channel on the open channel to repeat the access criteria not less frequently than every 30 s | N/A | N/A |

If FCC 15.323(c)(6) option, **If Random Waiting Interval is NOT implemented**

| Access Criteria, ref. to ANSI C63.17 clause 8.1.2 | Observation | Verdict |
|--|-------------|---------|
| b) Check that the EUT changes to an interference-free slot when interference is introduced on the time slot in use | N/A | N/A |

If FCC 15.323(c)(6) option, Only if Random Waiting Interval is implemented

| Access Criteria, ref. to ANSI C63.17 clause 8.1.3 | Observation | Verdict |
|--|-------------|---------|
| b-d) Check that the EUT uses random waiting interval before continuing transmission on an interfered time slot | N/A | N/A |

Comment: The tested EUT does not transmit unacknowledged control and signaling information.

Limits:

FCC 15.323(c)(4), RSS-213 Issue 3, clause 5.2, RSS-213 Issue 3, clause 5.2:

Once access to specific combined time and spectrum windows is obtained an acknowledgement from a system participant must be received by the initiating transmitter within one second or transmission must cease. Periodic acknowledgements must be received at least every 30 seconds or transmission must cease. Channels used exclusively for control and signaling information may transmit continuously for 30 seconds without receiving an acknowledgement, at which time the access criteria must be repeated.

FCC 15.323(c)(6), RSS-213 Issue 3, clause 5.2, RSS-213 Issue 3, clause 5.2:

If the selected combined time and spectrum windows are unavailable, the device may either monitor and select different windows or seek to use the same windows after waiting an amount of time, randomly chosen from a uniform random distribution between 10 and 150 milliseconds, commencing when the channel becomes available

3.15 Acknowledgements and Transmission Duration

Measurement Procedure:

Acknowledgements: ANSI C63.17, clause 8.2.1

Transmission Duration: ANSI C63.17, clause 8.2.2

During the test **Initial transmission without acknowledgements** the signal from the EUT to the companion device is blocked by circulators in addition to the tunable attenuator.

The test **Transmission time after loss of acknowledgements** is performed by cutting-off the signal from the companion device by a RF switch and measuring the time until the EUT stops transmitting.

The **Transmission Duration** test is performed by monitoring the slot in use and measuring the time until the EUT changes to a different slot.

Test Results:

Acknowledgements

| Test ref. to ANSI C63.17 clause 8.2.1 | Observation | Verdict |
|---|-------------|---------|
| a) Initial transmission without acknowledgements | 0.001 sec | Pass |
| c) Transmission time after loss of acknowledgements | 10.0 sec | Pass |

Transmission Duration

| Test ref. to ANSI C63.17 clause 8.2.2 | Observation | Verdict |
|---|-------------|---------|
| b) Transmission duration on same time and frequency window | 1.0 hour | Pass |

Comment: /

Limits, FCC 15.323(c)(3) and (4), RSS-213 Issue 3, clause 5.2:

Occupation of the same combined time and spectrum windows by a device or group of cooperating devices continuously over a period of time longer than 8 hours is not permitted without repeating the access criteria.

Once access to specific combined time and spectrum windows is obtained an acknowledgement from a system participant must be received by the initiating transmitter within one second or transmission must cease.

Periodic acknowledgements must be received at least every 30 seconds or transmission must cease. Channels used exclusively for control and signaling information may transmit continuously for 30 seconds without receiving an acknowledgement, at which time the access criteria must be repeated.

3.16 Dual Access Criteria Check

Measurement Procedure:

EUTs that does not implement the LIC procedure: ANSI C63.17, clause 8.3.1

EUTs that implement the LIC procedure: ANSI C63.17, clause 8.3.2

This test is required for equipment that uses the access criteria in FCC 15.323(c)(10).

Test Results:

EUTs that do NOT implements the LIC procedure:

| Test ref. to ANSI C63.17 clause 8.3.1 | Observation | Verdict |
|--|-------------|---------|
| b) EUT is restricted to a single carrier f ₁ for TDMA systems. The Test is Pass if EUT can transmit | N/A | N/A |
| c) d) Interference at level $T_L + U_M$ on all timeslots except one receive slot where interference is at least 10 dB below T_L | N/A | N/A |
| e) f) Interference at level $T_L + U_M$ on all timeslots except one transmit slot where interference is at least 10 dB below T_L | N/A | N/A |

EUTs that implements the LIC procedure:

| Test ref. to ANSI C63.17 clause 8.3.2 | Observation | Verdict |
|---|--|---------|
| b) EUT is restricted to a single carrier f _l for TDMA systems. The Test is Pass if EUT can transmit | EUT can transmit | Pass |
| c) d) Transmission on interference-free receive time/spectrum window | EUT transmits on interference free receive slot | Pass |
| e) f) Transmission on interference-free transmit time/spectrum window | EUT transmits on interference free transmit slot | Pass |

Comment: See plots.

Limits, FCC 15.323(c)(10), RSS-213 Issue 3, clause 5.2:

An initiating device may attempt to establish a duplex connection by monitoring both its intended transmit and receive time and spectrum windows. If both the intended transmit and receive time and spectrum windows meet the access criteria, then the initiating device can initiate a transmission in the intended transmit time and spectrum window. If the power detected by the responding device can be decoded as a duplex connection signal from the initiating device, then the responding device may immediately begin transmitting on the receive time and spectrum window monitored by the initiating device.

3.17 Alternative Monitoring Interval

Test procedure described in ANSI C63.17 clause 8.4.

This test is required if the EUT implements the provisions of FCC 15.323(c)(11).

Test result:

Not Tested. The tested EUT does not implement this provision. See manufacturers' declaration.

4 Measurement Uncertainty

| Measurement Uncertainty Values | | | | |
|--|-------------|----------------|--|--|
| Test Item | Uncertainty | | | |
| Output Power | | ±0.5 dB | | |
| Power Spectral Density | | ±0.5 dB | | |
| Out of Band Emissions, Conducted (RBW < 100 kHz) | < 3.6 GHz | ±0.6 dB | | |
| | > 3.6 GHz | ±0.9 dB | | |
| Spurious Emissions, Radiated | ±2.5 dB | | | |
| | ±2.2 dB | | | |
| Emission Bandwidth | ±4 % | | | |
| Power Line Conducted Emissions | | +2.9 / -4.1 dB | | |
| Spectrum Mask Measurements | Frequency | ±5 % | | |
| | Amplitude | ±1.0 dB | | |
| Frequency Error | | ±0.6 ppm | | |
| Timing and Jitter Measurements | | ±2.0 ns | | |
| Frame Timing Measurements | ±1.4 ppm | | | |
| Receiver Blocking Levels | | ±1.0 dB | | |
| Temperature Uncertainty | | ±1 °C | | |

All uncertainty values are expanded standard uncertainty to give a confidence level of 95%, based on coverage factor k=2

5 Test Setups

5.1 Frequency Measurements

Test Set-up 1

This setup is used for measuring Carrier frequency stability at normal and extreme temperatures.

5.2 Timing Measurements

Test Set-up 2

This setup is used for measuring Frame repetition stability, Frame period and Jitter.

5.3 Conducted Emission Test

Test Set-up 3

This setup is used for all conducted emission tests.

5.4 Power Line Conducted Emissions Test

Test Set-Up 5

5.5 Monitoring Tests

Test Set-Up 6

This test setup is used for all Monitoring and Time and Spectrum Access Procedure tests. The path loss from the signal generators to the EUT is measured with a power meter before the testing is started.

The CLK100 is used to synchronize the Pulse-/ Pattern generator to the start of the DECT frame, this signal always comes from the base station. If the EUT is a DECT Portable Part (i.e. a handset) the CLK100 signal will come from the Companion Device.

The sync signal to the Spectrum Analyzer is the CLK100 signal that is regenerated in the Pulse-/ Pattern Generator, this is used to synchronize the Spectrum Analyzer to the DECT frame when in zero span. The Pulse-/ Pattern Generator is used for tests that require time synchronized pulses or blocking of specific time slots.

6 Test Equipment Used

To facilitate inclusion on each page of the test equipment used for related tests, each item of test equipment and ancillaries are identified (numbered) by the Testhouse.
