Greetings:

Itronix T5200 with Sierra Wireless SB300 Radio Modem
Itronix T5200 with Sierra Wireless SB320 Radio Modem

This letter is to confirm that all antenna, interface board, cabling, and matching circuitry used in these two model variants of our Itronix T5200-Series product are identical.

The SB300-Series radio interface design for the Itronix T5200 product incorporates a single PCB expansion board and antenna system. The Sierra Wireless OEM radio modem is mounted to this PCB. The only difference between models is whether an SB300 or SB320 is mounted.

Please refer to the 13th July, 1999 letter from Keith Campden, Product Support Engineering, Sierra Wireless for a confirmation that the SB300 and SB320 radio circuits are identical.

Thank you,

Hidde Hanenburg
Engineering Manager
