SIM7600SA_User Manual_V1.00

Document Title	SIM7600SA_User Manual
Version	1.00
Date	2017-10-11
Status	Released
Document Control ID	SIM7600SA_User Manual_V1.00

RF Exposure Statement:

For the product, under normal use condition is at least 20cm away from the body of the user, the user must keep at least 20cm distance to the product.

General Notes

There are no restrictions of use SIM7600SA module.

Note that the module was assessed for use with cables of less than 3m length and not for use in automotive environments. For RF Exposure, the module was assessed for use at more than 20 cm from the body. When installing this module permanently into a host product to create a new Radio Equipment Directive device; the manufacturer responsible for the final product must assess if the combination of this module and the host equipment complies with the essential requirements of the RE Directive 2014/53/EU.”

SIMCom offers this information as a service to its customers to support the application and engineering efforts that use the products designed by SIMCom. The information provided is based on the requirements specifically from the customers. SIMCom has not undertaken any independent search for additional relevant information, including any information that may be in the customer’s possession. Furthermore, the system validation of the product designed by SIMCom within a larger electronic system remains the responsibility of the customer or the customer’s system integrator. All specifications supplied herein are subject to change without notice.

Copyright

This document contains the proprietary technical information which is the property of SIMCom Limited, copying of this document, giving it to others, the using or communication of the contents thereof are forbidden without the official authority by SIMCom. Offenders are liable to the payment of the damages. All rights are reserved in the event of grant of a patent or the registration of a utility model or design. All specifications supplied herein are subject to change without notice

Compliance Information

FCC Compliance Statement: This device complies the FCC Rules . Operation is subject to the following two conditions: 1. This device may not cause harmful interference, and 2. This device must accept any interference received, including interference that may cause undesired operation. This device must accept any interference received, including interference that may cause undesired operation. Product that is a radio transmitter is labeled with FCC ID.

FCC Caution:

- (1) Exposure to Radio Frequency Radiation. This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be collocated or operating in conjunction with any other antenna or transmitter. End-users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance.
- (2) Any changes or modifications not expressly approved by the grantee of this device could void the user’s authority to operate the equipment.
- (3) This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
- (4) Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user authority to operate the equipment.
- (5) the modules FCC ID is not visible when installed in the host, or
- (6) if the host is marketed so that end users do not have straight forward commonly used methods for access to remove the module so that the FCC ID of the module is visible; then an additional permanent label referring to the enclosed module: Contains Transmitter Module
FCC ID: 2AJYU-8PYA002

1 Introduction

This document describes the electronic specifications, RF specifications, interfaces, mechanical characteristics and testing results of the SIMCom SIM7600SA module. With the help of this document and other software application notes/user guides, users can understand and use module to design and develop applications quickly.

1.1 Product Outline

The SIM7600SA module support GSM, WCDMA, TDD-LTE and FDD-LTE. Users can choose the module according to the wireless network configuration. The supported radio frequency bands are described in the following table.

Table 1: SIM7600SA frequency bands

Standard	Frequency	SIM7600SA
GSM	850MHz	✓
	900MHz	✓
	1800M Hz	✓
	1900M Hz	✓
WCDMA	B1	✓
	B2	✓
	B5	✓
	B8	✓
LTE	FDD B1	✓
	FDD B2	✓
	FDD B3	✓
	FDD B4	✓
	FDD B5	✓
	FDD B7	✓
	FDD B8	✓
	FDD B28	✓
	TDD B66	✓
Category		CAT1

With a small physical dimension of 30*30*2.9 mm and with the functions integrated, the SIM7600SA module can meet almost any space requirement in users' applications, such as smart

phone, PDA, industrial handheld, machine-to-machine and vehicle application, etc.

1.2 Hardware Interface Overview

The interfaces are described in detail in the next chapters include:

- **Power Supply**
- **USB Interface**
- **UART Interface**
- **MMC/SD Interface**
- **SDIO Interface**
- **USIM Interface**
- **GPIO**
- **ADC**
- **LDO Power Output**
- **Current Sink Source**
- **PCM Interface**
- **SPI Interface**
- **I2C Interface**

1.3 Hardware Block Diagram

The block diagram of the SIM7600SA module is shown in the figure below.

Figure 1: SIM7600SA block diagram

1.4 Functional Overview

Table 2: General features

Feature	Implementation
Power supply	Single supply voltage 3.4~4.2V
Power saving	Current in sleep mode : <5mA
Radio frequency bands	Please refer to the table 1
Transmitting power	GSM/GPRS power class: --EGSM900: 4 (2W) --DCS1800: 1 (1W) EDGE power class: --EGSM900: E2 (0.5W) --DCS1800: E1 (0.4W) UMTS power class: --WCDMA :3 (0.25W) LTE power class: 3 (0.25W)
Data Transmission Throughput	GPRS multi-slot class 12 EDGE multi-slot class 12 UMTS R99 speed: 384 kbps DL/UL HSPA+: 5.76 Mbps(UL), 42 Mbps(DL) TD-HSDPA/HSUPA: 2.2 Mbps(UL), 2.8 Mbps(DL) LTE CAT 1 : 10 Mbps (DL) LTE CAT 1 : 5 Mbps (UL) LTE CAT 4 : 150 Mbps (DL) LTE CAT 4 : 50 Mbps (UL)
Antenna	GSM/UMTS/LTE main antenna. UMTS/LTE auxiliary antenna GNSS antenna
GNSS	GNSS engine (GPS,GLONASS) Protocol: NMEA
SMS	MT, MO, CB, Text and PDU mode SMS storage: USIM card or ME(default) Transmission of SMS alternatively over CS or PS.
USIM interface	Support identity card: 1.8V/ 3V
USIM application toolkit	Support SAT class 3, GSM 11.14 Release 98 Support USAT
Phonebook management	Support phonebook types: DC,MC,RC,SM,ME,FD,ON,LD,EN
Audio feature	Support PCM interface Only support PCM master mode and short frame sync, 16-bit linear data formats

UART interface	A full modem serial port by default Baud rate: 300bps to 4Mbps(default:115200bps) Autobauding baud rate: 9600,19200,38400,57600,115200bps Can be used as the AT commands or data stream channel Support RTS/CTS hardware handshake Multiplex ability according to GSM 07.10 Multiplexer Protocol
MMC/SD	Support MMC and SD cards with 2.95 V on SD port
SDIO	Support SDIO with 1.8 V only on SDIO port
USB	USB 2.0 high speed interface
Firmware upgrade	Firmware upgrade over USB interface
Physical characteristics	Size:30*30*2.9mm Weight:5.7 g
Temperature range	Normal operation temperature: -30°C to +80°C Extended operation temperature: -40°C to +85°C* Storage temperature -45°C to +90°C

****Note: Module is able to make and receive voice calls, data calls, SMS and make GPRS/UMTS/HSPA+/LTE traffic in -40°C ~ +85°C. The performance will be reduced slightly from the 3GPP specifications if the temperature is outside the normal operating temperature range and still within the extreme operating temperature range.***

2 Package Information

2.1 Pin Assignment Overview

All functions of the SIM7600SA will be provided through 87 pads that will be connected to the customers' platform. The following Figure is a high-level view of the pin assignment of the SIM7600SA.

Figure 2: Pin assignment overview

Table 3: Pin definition

Pin No.	Pin name	Pin No.	Pin name
1	GND	2	GND
3	PWRKEY	4	RESET
5	GND	6	SPI_CLK
7	SPI_MISO	8	SPI_MOSI
9	SPI_CS	10	GND
11	USB_VBUS	12	USB_DN
13	USB_DP	14	GND
15	VDD_1V8	16	USB_ID
17	USIM_DATA	18	USIM_RST
19	USIM_CLK	20	USIM_VDD
21	SD_CMD	22	SD_DATA0
23	SD_DATA1	24	SD_DATA2
25	SD_DATA3	26	SD_CLK
27	SDIO_DATA1	28	SDIO_DATA2
29	SDIO_CMD	30	SDIO_DATA0
31	SDIO_DATA3	32	SDIO_CLK
33	GPIO3	34	GPIO6
35	HSIC_STROBE	36	HSIC_DATA
37	GND	38	VBAT
39	VBAT	40	GND
41	GND	42	NC (RESERVED)
43	GND	44	VDD_EXT
45	ISINK	46	ADC2
47	ADC1	48	SD_DET
49	STATUS	50	GPIO43*
51	NETLIGHT	52	GPIO41
53	USIM_DET	54	FLIGHTMODE
55	SCL	56	SDA
57	GND	58	GND
59	AUX_ANT	60	GND
61	GND	62	VBAT
63	VBAT	64	GND
65	GND	66	RTS
67	CTS	68	RXD

69	RI	70	DCD
71	TXD	72	DTR
73	PCM_OUT	74	PCM_IN
75	PCM_SYNC	76	PCM_CLK
77	GND	78	GND
79	GNSS_ANT	80	GND
81	GND	82	MAIN_ANT
83	COEX1*	84	COEX2
85	BOOT_CFG0*	86	COEX3*
87	GPIO77		

NOTE: Before the normal power up, *GPIO43*, *COEX1*, *COEX3* and *BOOT_CFG0* cannot be pulled up.

2.2 Pin Description

Table 4: IO parameters definition

Pin type	Description
PI	Power input
PO	Power output
AI	Analog input
AIO	Analog input/output
I/O	Bidirectional input /output
DI	Digital input
DO	Digital output
DOH	Digital output with high level
DOL	Digital output with low level
PU	Pull up
PD	Pull down

Table 5: Pin description

Pin name	Pin No.	Default status	Description	Comment
Power supply				
VBAT	38,39, 62,63	PI	Power supply, voltage range: 3.4~4.2V.	
VDD_EXT	44	PO	LDO power output for other external circuits with Max 150mA current output. Its output voltage is 0V by default. (The voltage can be configured to 2.8V by AT command) .	If unused, keep it open.

VDD_1V8	15	PO	1.8V SMPS output with Max 50mA current output for external circuit, such as level shift circuit.	If unused, keep it open.
GND	1,2,5,10,14,37,40,41,43,57,58,60,61,64,65,77,78,80,81		Ground	
System Control				
PWRKEY	3	DI,PU	System power on/off control input, active low.	The high voltage is 0.8V;
RESET	4	DI, PU	System reset control input, active low.	RESET has been pulled up to 1.8V via 40Kohm resistor internally.
SD interface				
SD_CMD	21	DO	SDIO command	If unused, keep them open.
SD_DATA0	22	I/O	SDIO data	
SD_DATA1	23	I/O		
SD_DATA2	24	I/O		
SD_DATA3	25	I/O		
SD_CLK	26	DO	SDIO clock	
USIM interface				
USIM_DATA	17	I/O,PU	USIM Card data I/O, which has been pulled up via a 100KR resistor to USIM_VDD internally. Do not pull it up or down externally.	All lines of USIM interface should be protected against ESD.
USIM_RST	18	DO	USIM Reset	
USIM_CLK	19	DO	USIM clock	
USIM_VDD	20	PO	Power output for USIM card, its output Voltage depends on USIM card type automatically. Its output current is up to 50mA.	
SPI interface				
SPI_CLK	6	DO	SPI clock output	Only support SPI master mode. If unused, please keep them open.
SPI_MISO	7	DI	SPI master in/slave out data	
SPI_MOSI	8	DO	SPI master out/slave in data	
SPI_CS	9	DO	SPI chip-select output	
USB				

USB_VBUS	11	DI,PD	Valid USB detection input with 3.0~5.25V detection voltage	
USB_DN	12	I/O	Negative line of the differential, bi-directional USB signal.	
USB_DP	13	I/O	Positive line of the differential, bi-directional USB signal.	
USB_ID	16	DI	High-speed USB ID input	Keep it open.
UART interface				
RTS	66	DOH	Request to send	If unused, keep them open.
CTS	67	DI,PU	Clear to Send	
RXD	68	DI,PU	Receive Data	
RI	69	DOH	Ring Indicator	
DCD	70	DOH	Carrier detects	
TXD	71	DOH	Transmit Data	
DTR	72	DI,PU	DTE get ready	
I2C interface				
SCL	55	DO	I2C clock output	If unused, keep open, or else pull them up via 4.7KΩ resistors to 1.8V.
SDA	56	I/O	I2C data input/output	
SDIO interface				
SDIO_DATA1	27	I/O	SDIO data1	For WLAN solution
SDIO_DATA2	28	I/O	SDIO data2	
SDIO_CMD	29	DO	SDIO command	
SDIO_DATA0	30	I/O	SDIO data0	
SDIO_DATA3	31	I/O	SDIO data3	
SDIO_CLK	32	DO	SDIO clock	
HSIC interface				
HSIC_STROBE	35	DO	HSIC strobe wakeup	Reserved
HSIC_DATA	36	I/O	HSIC data	
PCM interface				
PCM_OUT	73	DO	PCM data output.	If unused, please keep them open.
PCM_IN	74	DI	PCM data input.	
PCM_SYNC	75	DO	PCM data frame sync signal.	
PCM_CLK	76	DO	PCM data bit clock.	
GPIO				
NETLIGHT	51	DO	LED control output as network status indication.	If unused, keep them open. DO NOT PULL UP GPIO43 DURING NORMAL POWER UP!
FLIGHTMODE	54	DI,PU	Flight Mode control input. High level(or open): Normal Mode Low level: Flight Mode	
STATUS	49	DO	Operating status output.	

			High level: Power on and firmware ready Low level: Power off	
GPIO41	52	IO	GPIO	
GPIO43	50	IO	GPIO	
GPIO3	33	IO	GPIO	
GPIO6	34	IO	GPIO	
SD_DET	48	IO	Default: GPIO Optional: SD card detecting input. H: SD card is removed L: SD card is inserted	
USIM_DET	53	IO	Default: GPIO Optional: USIM card detecting input. H: USIM is removed L: USIM is inserted	
GPIO77	87	IO	GPIO	
RF interface				
MAIN_ANT	82	AIO	MAIN antenna soldering pad	
GNSS_ANT	79	AI	GNSS antenna soldering pad	
AUX_ANT	59	AI	Auxiliary antenna soldering pad	
Other interface				
ISINK	45	PI	Ground-referenced current sink.	
ADC1	47	AI	Analog-digital converter input 1	If unused, please keep them open.
ADC2	46	AI	Analog-digital converter input 2	
COEX1	83	I/O	RF synchronizing between Wi-Fi and LTE.	If unused, keep them open. DO NOT PULL UP COEX1 AND COEX2 DURING NORMAL POWER UP!
COEX2	84	I/O		
COEX3	86	I/O		
BOOT_CFG0	85	DI,PD	Boot configuration input. Module will be forced into USB download mode by connect 85 pin to VDD_1V8 during power up.	Do place 2 test points for debug. DO NOT PULL UP BOOT_CFG0 DURING NORMAL POWER UP!
NC	42		No connection.	Keep it open

2.3 Mechanical Information

The following figure shows the package outline drawing of SIM7600SA.

Figure 3: Dimensions (Unit: mm)

2.4 Footprint Recommendation

Figure 4: Footprint recommendation (Unit: mm)

3 Interface Application

3.1 Power Supply

The power supply pins of SIM7600SA include 4 pins (pin 62&63, pin 38&39) named VBAT.

The 4 VBAT pads supply the power to RF and baseband circuits directly. On VBAT pads, the ripple current up to 2A typically, due to GSM/GPRS emission burst (every 4.615ms), may cause voltage drop. So the power supply for these pads must be able to provide sufficient current up to more than 2A in order to avoid the voltage drop is more than 300mV.

The following figure shows the VBAT voltage ripple wave at the maximum power transmit phase.

Figure 5: VBAT voltage drop during burst emission (GSM/GPRS)

Note: The test condition: The voltage of power supply for VBAT is 3.8V, Cd=100 μ F tantalum capacitor (ESR=0.7 Ω) and Cf=100nF (Please refer to Figure 6—Application circuit).

Table 6: VBAT pins electronic characteristic

Symbol	Description	Min.	Typ.	Max.	Unit
VBAT	Module power voltage	3.4	3.8	4.2	V
I _{VBAT(peak)}	Module power peak current in normal mode.	-	2	-	A
I _{VBAT(average)}	Module power average current in normal mode	Please refer to the table 34			
I _{VBAT(sleep)}	Power supply current in sleep mode				
I _{VBAT(power-off)}	Module power current in power off mode.	-	-	20	uA

3.1.1 Power Supply Design Guide

Make sure that the voltage on the VBAT pins will never drop below 3.4V, even during a transmit burst, when current consumption may rise up to 2A. If the voltage drops below 3.4V, the RF performance may be affected.

Note: *If the power supply for VBAT pins can support up to 2A, using a total of more than 300uF capacitors is recommended, or else users must using a total of 1000uF capacitors typically, in order to avoid the voltage drop is more than 300mV.*

Some multi-layer ceramic chip (MLCC) capacitors (0.1/1uF) with low ESR in high frequency band can be used for EMC.

These capacitors should be put as close as possible to VBAT pads. Also, users should keep VBAT trace on circuit board wider than 2 mm to minimize PCB trace impedance. The following figure shows the recommended circuit.

Figure 6: Power supply application circuit

In addition, in order to guard for over voltage protection, it is suggested to use a zener diode with 5.1V reverse zener voltage and more than 500mW power dissipation.

Table 7: Recommended Zener diode list

No.	Manufacturer	Part Number	Power dissipation	Package
1	On semi	MMSZ5231BT1G	500mW	SOD123
2	Prisemi	PZ3D4V2H	500mW	SOD323
3	Vishay	MMSZ4689-V	500mW	SOD123
4	Crownpo	CDZ55C5V1SM	500mW	0805

3.1.2 Recommended Power Supply Circuit

It is recommended that a switching mode power supply or a linear regulator power supply is used. It is important to make sure that all the components used in the power supply circuit can resist a peak current up to 2A.

The following figure shows the linear regulator reference circuit with 5V input and 3.8V output.

Figure 7: Linear regulator reference circuit

If there is a big voltage difference between input and output for VBAT power supply, or the efficiency is extremely important, then a switching mode power supply will be preferable. The following figure shows the switching mode power supply reference circuit.

Figure 8: Switching mode power supply reference circuit

Note: The Switching Mode power supply solution for VBAT must be chosen carefully against Electro Magnetic Interference and ripple current from depraving RF performance.

3.1.3 Voltage Monitor

To monitor the VBAT voltage, the AT command “AT+CBC” can be used.

For monitoring the VBAT voltage outside or within a special range, the AT command “AT+CVALARM” can be used to enable the under-voltage warning function.

If users need to power off SIM7600SA, when the VBAT voltage is out of a range, the AT command “AT+CPMVT” can be used to enable under-voltage power-off function.

Note: Under-voltage warning function and under-voltage power-off function are disabled by default. For more information about these AT commands, please refer to Document [1].

3.2 Power on/Power off/Reset Function

3.2.1 Power on

SIM7600SA can be powered on by pulling the PWRKEY pin down to ground.

The PWRKEY pin has been pulled up with a diode to 1.8V internally, so it does not need to be pulled up externally. It is strongly recommended to put a 100nF capacitor, an ESD protection diode, close to the PWRKEY pin as it would strongly enhance the ESD performance of PWRKEY pin. Please refer to the following figure for the recommended reference circuit.

Figure 9: Reference power on/off circuit

Note: Module could be automatically power on by connecting PWRKEY pin to ground via 0Ω resistor directly.

The power-on scenarios are illustrated in the following figure.

Figure 10: Power on timing sequence

Table 8: Power on timing and electronic characteristic

Symbol	Parameter	Min.	Typ.	Max.	Unit
T_{on}	The time of active low level impulse of PWRKEY pin to power on module	100	500	-	ms
$T_{on(status)}$	The time from power-on issue to STATUS pin output high level(indicating power up ready)	12	13	-	s
$T_{on(uart)}$	The time from power-on issue to UART port ready	11	12	-	s
$T_{on(usb)}$	The time from power-on issue to USB port ready	11	12	-	s
V_{IH}	Input high level voltage on PWRKEY pin	0.6	0.8	1.8	V
V_{IL}	Input low level voltage on PWRKEY pin	-0.3	0	0.5	V

3.2.2 Power off

The following methods can be used to power off SIM7600SA.

- Method 1: Power off SIM7600SA by pulling the PWRKEY pin down to ground.
- Method 2: Power off SIM7600SA by AT command “AT+CPOF”.
- Method 3: over-voltage or under-voltage automatic power off. The voltage range can be set by AT command “AT+CPMVT”.
- Method 4: over-temperature or under-temperature automatic power off.

Note: If the temperature is outside the range of $-30\sim+80\text{ }^{\circ}\text{C}$, some warning will be reported via AT port. If the temperature is outside the range of $-40\sim+85\text{ }^{\circ}\text{C}$, SIM7600SA will be powered off automatically.

For details about “AT+CPOF” and “AT+CPMVT”, please refer to Document [1].

These procedures will make modules disconnect from the network and allow the software to enter a safe state, and save data before module be powered off completely.

The power off scenario by pulling down the PWRKEY pin is illustrated in the following figure.

Figure 11: Power off timing sequence

Table 9: Power off timing and electronic characteristic

Symbol	Parameter	Time value			Unit
		Min.	Typ.	Max.	
T_{off}	The active low level time pulse on PWRKEY pin to power off module	2.5	--	--	s
$T_{off(status)}$	The time from power-off issue to STATUS pin output low level(indicating power off)*	25	26	-	s
$T_{off(uart)}$	The time from power-off issue to UART port off	14	15	-	s
$T_{off(usb)}$	The time from power-off issue to USB port off	27	28	-	s
T_{off-on}	The buffer time from power-off issue to power-on issue	0	-	-	s

***Note:** The STATUS pin can be used to detect whether module is powered on or not. When module has been powered on and firmware goes ready, STATUS will be high level, or else STATUS will still low level.

3.2.3 Reset Function

SIM7600SA can be reset by pulling the RESET pin down to ground.

Note: This function is only used as an emergency reset, when AT command “AT+CPOF” and the PWRKEY pin all have lost efficacy.

The RESET pin has been pulled up with a 40K Ω resistor to 1.8V internally, so it does not need to be pulled up externally. It is strongly recommended to put a 100nF capacitor and an ESD protection diode close to the RESET pin. Please refer to the following figure for the recommended reference circuit.

Figure 12: Reference reset circuit

Table 10: RESET pin electronic characteristic

Symbol	Description	Min.	Typ.	Max.	Unit
T_{reset}	The active low level time impulse on RESET pin to reset module	50	100	500	ms
V_{IH}	Input high level voltage	1.17	1.8	2.1	V
V_{IL}	Input low level voltage	-0.3	0	0.8	V

3.3 UART Interface

SIM7600SA provides a 7-wire UART (universal asynchronous serial transmission) interface as DCE (Data Communication Equipment). AT commands and data transmission can be performed through UART interface.

3.3.1 UART Design Guide

The following figures show the reference design.

Figure 13: UART full modem

Figure 14: UART null modem

The SIM7600SA UART is 1.8V voltage interface. If user's UART application circuit is 3.3V voltage interface, the level shifter circuits should be used for voltage matching. The

SIM7600SA_User Manual_V1.00 **2017-10-11**

TXB0108RGYR provided by Texas Instruments is recommended. The following figure shows the voltage matching reference design.

Figure 15: Reference circuit of level shift

To comply with RS-232-C protocol, the RS-232-C level shifter chip should be used to connect SIM7600SA to the RS-232-C interface, for example SP3238ECA, etc.

Note: SIM7600SA supports the following baud rates: 300, 600, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400, 460800, 921600, 3200000, 3686400, 4000000bps. The default band rate is 115200bps.

3.3.2 RI and DTR Behavior

The RI pin can be used to interrupt output signal to inform the host controller such as application CPU.

Normally RI will keep high level until certain conditions such as receiving SMS, or a URC report coming, and then it will change to low level. It will stay low until the host controller clears the interrupted event with “AT+CRIRS” AT command.

Figure 16: RI behaviour (SMS and URC report)

Normally RI will be kept at a high level until a voice call, then it will output periodic rectangular wave with 5900ms low level and 100ms high level. It will output this kind of periodic rectangular wave until the call is answered or hung up.

Figure 17: RI behaviour (voice call)

Note: For more details of AT commands about UART, please refer to document [1] and [22].

DTR pin can be used to wake SIM7600SA from sleep. When SIM7600SA enters sleep mode, pulling down DTR can wake SIM7600SA.

3.4 USB Interface

The SIM7600SA contains a USB interface compliant with the USB2.0 specification as a peripheral, but the USB charging function is not supported.

SIM7600SA can be used as a USB device. SIM7600SA supports the USB suspend and resume mechanism which can reduce power consumption. If there is no data transmission on the USB bus, SIM7600SA will enter suspend mode automatically, and will be resumed by some events such as voice call, receiving SMS, etc.

Figure 18: USB reference circuit

Because of the high bit rate on USB bus, more attention should be paid to the influence of the junction capacitance of the ESD component on USB data lines. Typically, the capacitance should be less than 1pF. It is recommended to use an ESD protection component such as ESD9L5.0ST5G provided by On Semiconductor (www.onsemi.com).

D3 is suggested to select the diode with anti-ESD and voltage surge function, or customer could add a ZENER diode for surge clamping. The recommend diodes please refer to table 7.

Note: The USB_DN and USB_DP nets must be traced by 90Ohm $\pm$ 10% differential impedance.

3.5 USIM Interface

SIM7600SA supports both 1.8V and 3.0V USIM Cards.

Table 11: USIM electronic characteristic in 1.8V mode (USIM_VDD=1.8V)

Symbol	Parameter	Min.	Typ.	Max.	Unit
USIM_VDD	LDO power output voltage	1.75	1.8	1.95	V
V _{IH}	High-level input voltage	0.65*USIM_VDD	-	USIM_VDD +0.3	V
V _{IL}	Low-level input voltage	-0.3	0	0.35*USIM_VDD	V
V _{OH}	High-level output voltage	USIM_VDD -0.45	-	USIM_VDD	V
V _{OL}	Low-level output voltage	0	0	0.45	V

Table 12: USIM electronic characteristic 3.0V mode (USIM_VDD=2.95V)

Symbol	Parameter	Min.	Typ.	Max.	Unit
USIM_VDD	LDO power output voltage	2.75	2.95	3.05	V
V _{IH}	High-level input voltage	0.65*USIM_VDD	-	USIM_VDD +0.3	V
V _{IL}	Low-level input voltage	-0.3	0	0.25*USIM_VDD	V
V _{OH}	High-level output voltage	USIM_VDD -0.45	-	USIM_VDD	V
V _{OL}	Low-level output voltage	0	0	0.45	V

3.5.1 USIM Application Guide

It is recommended to use an ESD protection component such as ESDA6V1W5 produced by ST (www.st.com) or SMF15C produced by ON SEMI (www.onsemi.com). Note that the USIM peripheral circuit should be close to the USIM card socket. The following figure shows the 6-pin SIM card holder reference circuit.

Figure 19: USIM interface reference circuit

Note: USIM_DATA has been pulled up with a 100KΩ resistor to USIM_VDD in module. A 100nF capacitor on USIM_VDD is used to reduce interference. For more details of AT commands about USIM, please refer to document [1]. USIM_CLK is very important signal, the rise time and fall time of USIM_CLK should be less than 40ns, otherwise the USIM card might not be initialized correctly.

Recommended USIM Card Holder

It is recommended to use the 6-pin USIM socket such as C707 10M006 512 produced by Amphenol. User can visit <http://www.amphenol.com> for more information about the holder.

Figure 20: Amphenol SIM card socket

Table 13: Amphenol USIM socket pin description

Pin	Signal	Description
C1	USIM_VDD	USIM Card Power supply.
C2	USIM_RST	USIM Card Reset.
C3	USIM_CLK	USIM Card Clock.
C5	GND	Connect to GND.
C6	VPP	
C7	USIM_DATA	USIM Card data I/O.

3.6 PCM Interface

SIM7600SA provides a PCM interface for external codec, which can be used in master mode with short sync and 16 bits linear format.

Table 14: PCM format

Characteristics	Specification
Line Interface Format	Linear(Fixed)
Data length	16bits(Fixed)
PCM Clock/Sync Source	Master Mode(Fixed)
PCM Clock Rate	2048 KHz (Fixed)
PCM Sync Format	Short sync(Fixed)
Data Ordering	MSB

Note: For more details about PCM AT commands, please refer to document [1].

3.6.1 PCM timing

SIM7600SA supports 2.048 MHz PCM data and sync timing for 16 bits linear format codec.

Figure 21: PCM_SYNC timing

Figure 22: EXT codec to module timing

Figure 23: Module to EXT codec timing

Table 15: PCM timing parameters

Parameter	Description	Min.	Typ.	Max.	Unit
T(sync)	PCM_SYNC cycle time	—	125	—	μs
T(synch)	PCM_SYNC high level time	—	488	—	ns
T(sync _l)	PCM_SYNC low level time	—	124.5	—	μs
T(clk)	PCM_CLK cycle time	—	488	—	ns
T(clkh)	PCM_CLK high level time	—	244	—	ns
T(clkl)	PCM_CLK low level time	—	244	—	ns
T(susync)	PCM_SYNC setup time high before falling edge of PCM_CLK	—	122	—	ns
T(hsync)	PCM_SYNC hold time after falling edge of PCM_CLK	—	366	—	ns
T(sudin)	PCM_IN setup time before falling edge of PCM_CLK	60	—	—	ns
T(hdin)	PCM_IN hold time after falling edge of PCM_CLK	60	—	—	ns
T(pdout)	Delay from PCM_CLK rising to PCM_OUT valid	—	—	60	ns
T(zdout)	Delay from PCM_CLK falling to PCM_OUT HIGH-Z	—	—	60	ns

3.6.2 PCM Application Guide

The following figure shows the external codec reference design.

Figure 24: Audio codec reference circuit

3.7 SD Interface

SIM7600SA provides a 4-bit SD/MMC interface with clock rate up to 200 MHz, The voltage of MMC/SD interface is 2.95V, which is compatible with SDIO Card Specification (version 3.0) and Secure Digital (Physical Layer Specification, version 3.0).It supports up to 32GB SD cards.

Table 16: MMC/SD electronic characteristic (SD_DATA0-SD_DATA3 , SD_CLK and SD_CMD) *

Symbol	Parameter	Min.	Typ.	Max.	Unit
VDD_SD	LDO power output voltage**	2.75	2.85	3.05	V
V _{IH}	High-level input voltage	0.65·VDD_EXT	-	VDD_EXT+0.3	V
V _{IL}	Low-level input voltage	-0.3	0	0.25·VDD_EXT	V
V _{OH}	High-level output voltage	VDD_EXT-0.4	2.85	VDD_EXT	V
V _{OL}	Low-level output voltage	0	0	0.45	V

Note:

*Be different from SD_DATA0-SD_DATA3 , SD_CLK and SD_CMD , SD_DET is 1.8V operation voltage.

Customer should provide VDD_SD for SD card and the current should more than 350mA. ESD/EMI components should be arranged beside SD card socket. Refer to the following application circuit.

Figure 25: SD reference circuit

SD card layout guide lines:

- Protect other sensitive signals/circuits from SD card signals.
- Protect SD card signals from noisy signals (clocks, SMPS, etc.).
- Up to 200 MHz clock rate, 50 Ω nominal, $\pm 10\%$ trace impedance
- CLK to DATA/CMD length matching < 1 mm
- 15–24 Ω termination resistor on clock lines near module
- Total routing length < 50 mm recommended
- Routing distance from module clock pin to termination resistor < 5 mm
- Spacing to all other signals = 2x line width
- Bus capacitance < 15 pF

3.8 I2C Interface

SIM7600SA provides a I2C interface compatible with I2C specification, version 5.0, with clock rate up to 400 kbps. Its operation voltage is 1.8V.

The following figure shows the I2C bus reference design.

Figure 26: I2C reference circuit

Note: *SDA and SCL do not have pull-up resistors in module. So, 2 external pull up resistors are needed in application circuit.*

“AT+CRIIC and AT+CWIIC” AT commands could be used to read/write register values of the I2C peripheral devices. For more details about AT commands please refer to document [1].

3.9 SDIO Interface

SIM7600SA provides a 4 bit 1.8V SDIO interface for WLAN solution.

The default WLAN IC is QCA9377, and the application need software support.

This part do not support now, need for future develop.

3.10 SPI Interface

SIM7600SA provides a SPI interface as a master only. Its operation voltage is 1.8V, and its clock rate is up to 26 MHz.

Note: *For more details of the AT commands about the SPI, please refer to document [1].*

3.11 Network status

The NETLIGHT pin is used to control Network Status LED, its reference circuit is shown in the following figure.

Figure 27: NETLIGHT reference circuit

Note: *The value of the resistor named “R” depends on the LED characteristic.*

Table 17: NETLIGHT pin status

NETLIGHT pin status	Module status
Always On	Searching Network; Call Connect(include VOLTE,SRLTE)
200ms ON, 200ms OFF	Data Transmit; 4G registered;
800ms ON, 800ms OFF	2G/3G registered network
OFF	Power off ;Sleep

Note: NETLIGHT output low level as “OFF”, and high level as “ON”.

3.12 Flight Mode Control

The FLIGHTMODE pin can be used to control SIM7600SA to enter or exit the Flight mode. In Flight mode, the RF circuit is closed to prevent interference with other equipments and minimize current consumption. Bidirectional ESD protection component is suggested to add on FLIGHTMODE pin, its reference circuit is shown in the following figure.

Figure 28: Flight mode switch reference circuit

Table 18: FLIGHTMODE pin status

FLIGHTMODE pin status	Module operation
Input Low Level	Flight Mode: RF is closed
Input High Level	AT+CFUN=0: RF is closed AT+CFUN=1:RF is working

3.13 Other interface

3.13.1 Sink Current Source

The ISINK pin is VBAT tolerant and intended to drive some passive devices, such as LCD backlight and white LED, etc. Its output current can be up to 40mA and be set by the AT command “AT+ CLEDITST”.

Table 19: Sink current electronic characteristic

Symbol	Description	Min.	Typ.	Max.	Unit
V _{ISINK}	Voltage tolerant	0.5	-	VBAT	V
I _{ISINK}	Current tolerant	0	-	40	mA

ISINK is a ground-referenced current sink. The following figure shows its reference circuit.

Figure 29: ISINK reference circuit

Note: The sinking current can be adjusted to meet the design requirement through the AT command “AT+ CLEDITST =<0>, <value>”. The “value” ranges from 0 to 8, on behalf of the current from 0mA to 40mA by 5mA step.

3.13.2 ADC

SIM7600SA has 2 dedicated ADC pins named ADC1 and ADC2. They are available for digitizing analog signals such as battery voltage and so on. These electronic specifications are shown in the following table.

Table 20: ADC1 and ADC2 electronic characteristics

Characteristics	Min.	Typ.	Max.	Unit
Resolution	–	15	–	Bits
Conversion time	–	442	–	ms
Input Range	0.1		1.7	V
Input serial resistance	1	–	–	MΩ

Note: “AT+CADC” and “AT+CADC2” can be used to read the voltage of the ADC1 and ADC2 pins, for more details, please refer to document [1].

3.13.3 LDO

SIM7600SA has a LDO power output, named VDD_EXT. its output voltage is 0V by default, Users can switch the LDO on or off by the AT command “AT+CVAUXS” and configure its output voltage by the AT command “AT+CVAUXV”.

Table 21: Electronic characteristic

Symbol	Description	Min.	Typ.	Max.	Unit
V _{VDD_EXT}	Output voltage	1.7	2.95	3.05	V
I _O	Output current	-	-	150	mA

Note: For more details of AT commands about VDD_EXT, please refer to document [1].

4 RF Specifications

4.1 GSM/UMTS/LTE RF Specifications

Table 22: Conducted transmission power

Frequency	Power	Min.
GSM850	33dBm $\pm$ 2dB	5dBm $\pm$ 5dB
EGSM900	33dBm $\pm$ 2dB	5dBm $\pm$ 5dB

4.2 GSM /UMTS/LTE Antenna Design Guide

Users should connect antennas to SIM7600SA's antenna pads through micro-strip line or other types of RF trace and the trace impedance must be controlled in 50Ω . SIMCom recommends that the total insertion loss between the antenna pads and antennas should meet the following requirements:

Table 27: Trace loss

Frequency	Loss
700MHz-960MHz	<0.5dB
1710MHz-2170MHz	<0.9dB
2300MHz-2650MHz	<1.2dB

To facilitate the antenna tuning and certification test, a RF connector and an antenna matching circuit should be added. The following figure is the recommended circuit.

Figure 30: Antenna matching circuit (MAIN_ANT)

In above figure, the components R1, C1, C2 and R2 are used for antenna matching, the values of components can only be achieved after the antenna tuning and usually provided by antenna vendor. By default, the R1, R2 are 0Ω resistors, and the C1, C2 are reserved for tuning. The component D1 is a TVS for ESD protection, and it is optional for users according to application environment. The RF test connector is used for the conducted RF performance test, and should be placed as close as to the module's MAIN_ANT pin. The traces impedance between SIM7600SA and antenna must be controlled in 50Ω .

Figure 31: Antenna matching circuit (AUX_ANT)

In above figure, R3, C3, C4 and R4 are used for auxiliary antenna matching. By default, the R3, R4 are 0 Ω resistors, and the C3, C4 are reserved for tuning. D2 is a TVS for ESD protection, and it is optional for users according to application environment.

Two TVS are recommended in the table below.

Table 28: Recommended TVS

Package	Part Number	Vender
0201	LXES03AAA1-154	Murata
0402	LXES15AAA1-153	Murata

Note : SIMCom suggests the LTE auxiliary antenna to be kept on, since there are many high bands in the designing of TDD-LTE, such as band38, band40 and band41. Because of the high insert loss of the RF cable and layout lines, the receiver sensitivity of these bands above will have risk to meet the authentication without the diversity antenna. For more details about auxiliary antenna design notice, please refer to document [25].

4.3 GNSS

SIM7600SA merges GNSS (GPS/GLONASS) satellite and network information to provide a high-availability solution that offers industry-leading accuracy and performance. This solution performs well, even in very challenging environmental conditions where conventional GNSS receivers fail, and provides a platform to enable wireless operators to address both location-based services and emergency mandates.

4.3.1 GNSS Technical specification

- Tracking sensitivity: -159 dBm (GPS) /-158 dBm (GLONASS)
- Cold-start sensitivity: -148 dBm
- Accuracy (Open Sky): 2.5m (CEP50)
- TTFF (Open Sky) : Hot start <1s, Cold start<35s

- Receiver Type: 16-channel, C/A Code
- GPS L1 Frequency: 1575.42 ± 1.023 MHz
- GLONASS: 1597.5~1605.8 MHz
- Update rate: Default 1 Hz
- GNSS data format: NMEA-0183
- GNSS Current consumption : 100mA (GSM/CDMA 1X/UMTS/LTE Sleep ,in total on VBAT pins)
- GNSS antenna: Passive/Active antenna

Note: If the antenna is active type, the power should be given by main board because there is no power supply on the GPS antenna pad. If the antenna is passive, it is suggested that the external LNA should be used.

4.3.2 GNSS Application Guide

Users can adopt an active antenna or a passive antenna to SIM7600SA. If using a passive antenna, an external LNA is a must to get better performance. The following figures are the reference circuits.

Figure 32: Active antenna circuit

Figure 33: Passive antenna circuit (Default)

In above figures, the components C1, L1 and L2 are used for antenna matching. Usually, the values of the components can only be achieved after antenna tuning and usually provided by antenna vendor. C2 is used for DC blocking. L3 is the matching component of the external LNA, and the value of L3 is determined by the LNA characteristic and PCB layout. Both VDD of active antenna and V_LNA need external power supplies which should be considered according to active antenna and LNA characteristic. LDO/DCDC is recommended to get lower current consuming by shutting down active antennas and LNA when GNSS is not working.

GNSS can be tested by NMEA port. NMEA sentences can be obtained through UART or USB automatically. NMEA sentences include GSV, GGA, RMC, GSA, and VTG. Before using GNSS, user should configure SIM7600SA in proper operating mode by AT command. Please refer to related documents for details. SIM7600SA can also get position location information through AT directly.

Note: GNSS is closed by default and can be started by AT+CGPS. The AT command has two parameters, the first is on/off, and the second is GNSS mode. Default mode is standalone mode. AGPS mode needs more support from the mobile telecommunication network. Please refer to document [24] for more details.

5 Electrical Specifications

5.1 Absolute maximum ratings

Absolute maximum rating for digital and analog pins of SIM7600SA are listed in the following table:

Table 29: Absolute maximum ratings

Parameter	Min.	Typ.	Max.	Unit
Voltage at VBAT	-0.5	-	6.0	V
Voltage at USB_VBUS	-0.5	-	5.85	V
Voltage at digital pins (RESET,SPI,Keypad,GPIO,I2C,UART,PCM)	-0.3	-	2.1	V
Voltage at digital pins (SD,USIM)	-0.3	-	3.05	V
Voltage at PWRKEY	-0.3	-	1.8	

5.2 Operating conditions

Table 30: Recommended operating ratings

Parameter	Min.	Typ.	Max.	Unit
Voltage at VBAT	3.4	3.8	4.2	V
Voltage at USB_VBUS	3.0	5.0	5.25	V

Table 31: 1.8V Digital I/O characteristics*

Parameter	Description	Min.	Typ.	Max.	Unit
V _{IH}	High-level input voltage	1.17	1.8	2.1	V
V _{IL}	Low-level input voltage	-0.3	0	0.63	V
V _{OH}	High-level output voltage	1.35	-	1.8	V
V _{OL}	Low-level output voltage	0	-	0.45	V
I _{OH}	High-level output current(no pull down resistor)	-	2	-	mA
I _{OL}	Low-level output current(no pull up resistor)	-	-2	-	mA
I _{IH}	Input high leakage current (no pull down resistor)	-	-	1	uA

I_{IL}	Input low leakage current(no pull up resistor)	-1	-	-	uA
----------	--	----	---	---	----

***Note:** These parameters are for digital interface pins, such as SPI, GPIOs (NETLIGHT, FLIGHTMODE, STATUS, USIM_DET, SD_DET), SDIO, I2C, UART, PCM, COEXn, and BOOT_CFG0.

The operating temperature of SIM7600SA is listed in the following table.

Table 32: Operating temperature

Parameter	Min.	Typ.	Max.	Unit
Normal operation temperature	-30	25	80	°C
Extended operation temperature*	-40	25	85	°C
Storage temperature	-45	25	+90	°C

***Note:** Module is able to make and receive voice calls, data calls, SMS and make GSM/CDMA 1X/UMTX/LTE traffic in -40°C ~ +85°C. The performance will be reduced slightly from the 3GPP specifications if the temperature is outside the normal operating temperature range and still within the extreme operating temperature range.

5.3 Operating Mode

5.3.1 Operating Mode Definition

The table below summarizes the various operating modes of SIM7600SA product.

Table 33: Operating mode Definition

Mode		Function
Normal operation	GSM /UMTS/LTE Sleep	In this case, the current consumption of module will be reduced to the minimal level and the module can still receive paging message and SMS.
	GSM/UMTS/LTE Idle	Software is active. Module is registered to the network, and the module is ready to communicate.
	GSM/UMTS/LTE Talk	Connection between two subscribers is in progress. In this case, the power consumption depends on network settings such as DTX off/on, FR/EFR/HR, hopping sequences, and antenna.
	GPRS/EDGE/ UMTS/LTE Standby	Module is ready for data transmission, but no data is currently sent or received. In this case, power consumption depends on network settings.
	GPRS/EDGE/ UMTS/LTE Data transmission	There is data transmission in progress. In this case, power consumption is related to network settings (e.g. power control level); uplink/downlink data rates, etc.
Minimum functionality mode		AT command “AT+CFUN=0” AT+CSCLK=1 can be used to set the module to a minimum functionality mode without removing the

	power supply. In this mode, the RF part of the module will not work and the USIM card will not be accessible, but the serial port and USB port are still accessible. The power consumption in this mode is lower than normal mode.
Flight mode	AT command “AT+CFUN=4” or pulling down the FLIGHTMODE pin can be used to set the module to flight mode without removing the power supply. In this mode, the RF part of the module will not work, but the serial port and USB port are still accessible. The power consumption in this mode is lower than normal mode.
Power off	Module will go into power off mode by sending the AT command “AT+CPOF” or pull down the PWRKEY pin, normally. In this mode the power management unit shuts down the power supply, and software is not active. The serial port and USB are is not accessible.

5.3.2 Sleep mode

In sleep mode, the current consumption of module will be reduced to the minimal level, and module can still receive paging message and SMS.

Several hardware and software conditions must be satisfied together in order to let SIM7600SA enter into sleep mode:

1. UART condition
2. USB condition
3. Software condition

Note: Before designing, pay attention to how to realize sleeping/waking function and refer to Document [26] for more details.

5.3.3 Minimum functionality mode and Flight mode

Minimum functionality mode ceases a majority function of module, thus minimizing the power consumption. This mode is set by the AT command which provides a choice of the functionality levels.

- AT+CFUN=0: Minimum functionality
- AT+CFUN=1: Full functionality (Default)
- AT+CFUN=4: Flight mode

If SIM7600SA has been set to minimum functionality mode, the RF function and USIM card function will be closed. In this case, the serial port and USB are still accessible, but RF function and USIM card will be unavailable.

If SIM7600SA has been set to flight mode, the RF function will be closed. In this case, the serial port and USB are still accessible, but RF function will be unavailable.

When SIM7600SA is in minimum functionality or flight mode, it can return to full functionality by the AT command “AT+CFUN=1”.

5.4 Current Consumption

The current consumption is listed in the table below.

Table 34: Current consumption on VBAT Pins (VBAT=3.8V)

GNSS			
GNSS supply current (AT+CFUN=0,with USB connection)	@ -140dBm, Tracking Typical:35mA		
GSM sleep/idle mode			
GSM/GPRS supply current (GNSS off, without USB connection)	Sleep mode@ BS_PA_MFRMS=2 Typical: 2.8mA Idle mode@ BS_PA_MFRMS=2 Typical: 18mA		
UMTS sleep/idle mode			
WCDMA supply current (GNSS off, without USB connection)	Sleep mode @DRX=9 Typical: 3.3mA Idle mode @DRX=9 Typical: 17.5mA		
LTE sleep/idle mode			
LTE supply current (GNSS off, without USB connection)	Sleep mode Typical: 4.6mA Idle mode Typical: 17.5mA		
GSM Talk			
EGSM900	@power level #5 Typical: 220mA		
DCS1800	@power level #5 Typical: 162mA		
UMTS Talk			
WCDMA B1	@Power 24dBm Typical: 540mA		
WCDMA B2	@Power 24dBm Typical: 535mA		
WCDMA B5	@Power 24dBm Typical: 530mA		
WCDMA B8	@Power 24dBm Typical: 385mA		
GPRS			
EGSM900(1 Rx,4 Tx)	@power level #5 Typical: 230mA		
DCS1800(1 Rx,4 Tx)	@power level #0 Typical: 195mA		
EGSM900(3Rx, 2 Tx)	@power level #5 Typical: 370mA		
DCS1800(3Rx, 2 Tx)	@power level #0 Typical: 275mA		
EDGE			
EGSM900(1 Rx,4 Tx)	@power level #8 Typical: 400mA		
DCS1800(1 Rx,4 Tx)	@power level #2 Typical: 300mA		
EGSM900(3Rx, 2 Tx)	@power level #8 Typical: 320mA		
DCS1800(3Rx, 2 Tx)	@power level #2 Typical: 230mA		
HSDPA data			
WCDMA B1	@Power 24dBm Typical: 478mA		
WCDMA B2	@Power 24dBm Typical: 468mA		
WCDMA B5	@Power 24dBm Typical: 480mA		
WCDMA B8	@Power 24dBm Typical: 430mA		
LTE data			
LTE-FDD B1	@5Mbps	22.3dBm	Typical: 577mA
	@10Mbps	22.4dBm	Typical: 590mA
	@20Mbps	22.4dBm	Typical: 630mA
LTE-FDD B2	@5Mbps	22.3dBm	Typical: 514mA
	@10Mbps	22.4dBm	Typical: 520mA

	@20Mbps	22.4dBm	Typical: 562mA
LTE-FDD B3	@5Mbps	22.2dBm	Typical: 479mA
	@10Mbps	22.1dBm	Typical: 498mA
	@20Mbps	22.1dBm	Typical: 530mA
LTE-FDD B4	@5Mbps	22.2dBm	Typical: 580mA
	@10Mbps	22.1dBm	Typical: 610mA
	@20Mbps	22.1dBm	Typical: 660mA
LTE-FDD B5	@5Mbps	22.2dBm	Typical: 610mA
	@10Mbps	22.1dBm	Typical: 600mA
	@20Mbps	22.1dBm	Typical: 630mA
LTE-FDD B7	@5Mbps	22.2dBm	Typical: 650mA
	@10Mbps	22.1dBm	Typical: 650mA
	@20Mbps	22.1dBm	Typical: 630mA
LTE-FDD B8	@5Mbps	22.8dBm	Typical: 644mA
	@10Mbps	22.8dBm	Typical: 646mA
LTE-FDD B28	@5Mbps	21.8dBm	Typical: 370mA
	@10Mbps	21.8dBm	Typical: 380mA
	@20Mbps	21.8dBm	Typical: 403mA
LTE-FDD B66	@5Mbps	21.5dBm	Typical: 580mA
	@10Mbps	21.7dBm	Typical: 610mA
	@20Mbps	21.7dBm	Typical: 660mA

5.5 ESD Notes

SIM7600SA is sensitive to ESD in the process of storage, transporting, and assembling. When SIM7600SA is mounted on the users' mother board, the ESD components should be placed beside the connectors which human body may touch, such as USIM card holder, audio jacks, switches, keys, etc. The following table shows the SIM7600SA ESD measurement performance without any external ESD component.

Table 35: The ESD performance measurement table (Temperature: 25°C, Humidity: 45%)

Part	Contact discharge	Air discharge
VBAT,GND	+/-6K	+/-12K
Antenna port	+/-5K	+/-10K
USB	+/-4K	+/-8K
UART	+/-3K	+/-6K
Other PADS	+/-3K	+/-6K

6 SMT Production Guide

6.1 Typical SMT Reflow Profile

SIMCom provides a typical soldering profile. Therefore the soldering profile shown below is only a generic recommendation and should be adjusted to the specific application and manufacturing constraints.

Figure 36: The ramp-soak-spike reflow profile of SIM7600SA

Note: For more details about secondary SMT, please refer to the document [21].

6.2 Moisture Sensitivity Level (MSL)

SIM7600SA is qualified to Moisture Sensitivity Level (MSL) 3 in accordance with JEDEC J-STD-033. If the prescribed time limit is exceeded, users should bake modules for 192 hours in drying equipment ($<5\%$ RH) at $40 \pm 5/0^{\circ}\text{C}$, or 72 hours at $85 \pm 5/-5^{\circ}\text{C}$. Note that plastic tray is not heat-resistant, and only can be baked at 45°C .

Table 37: Moisture Sensitivity Level and Floor Life

Moisture Sensitivity Level (MSL)	Floor Life (out of bag) at factory ambient $\leq 30^{\circ}\text{C}/60\%$ RH or as stated
1	Unlimited at $\leq 30^{\circ}\text{C}/85\%$ RH
2	1 year
2a	4 weeks
3	168 hours

4	72 hours
5	48 hours
5a	24 hours
6	Mandatory bake before use. After bake, it must be reflowed within the time limit specified on the label.

NOTE: IPC / JEDEC J-STD-033 standard must be followed for production and storage.

6.3 Stencil Foil Design Recommendation

The recommended thickness of stencil foil is more than 0.15mm.

7 Packaging

SIM7600SA module support tray packaging.

Figure 37: packaging diagram

Module tray drawing:

Figure 38: Tray drawing

Table 38: Tray size

Length ($\pm 3\text{mm}$)	Width ($\pm 3\text{mm}$)	Number

C. Terms and Abbreviations

Table 43: Terms and Abbreviations

Abbreviation	Description
ADC	Analog-to-Digital Converter
ARP	Antenna Reference Point
BER	Bit Error Rate
BTS	Base Transceiver Station
CS	Coding Scheme
CSD	Circuit Switched Data
CTS	Clear to Send
DAC	Digital-to-Analog Converter
DRX	Discontinuous Reception
DSP	Digital Signal Processor
DTE	Data Terminal Equipment (typically computer, terminal, printer)
DTR	Data Terminal Ready
DTX	Discontinuous Transmission
EFR	Enhanced Full Rate
EGSM	Enhanced GSM
EMC	Electromagnetic Compatibility
ESD	Electrostatic Discharge
ETS	European Telecommunication Standard
EVDO	Evolution Data Only
FCC	Federal Communications Commission (U.S.)
FD	SIM fix dialing phonebook
FDMA	Frequency Division Multiple Access
FR	Full Rate
GMSK	Gaussian Minimum Shift Keying
GNSS	Global Navigation Satellite System
GPRS	General Packet Radio Service
GPS	Global Positioning System
GSM	Global Standard for Mobile Communications
HR	Half Rate
HSPA	High Speed Packet Access
I2C	Inter-Integrated Circuit
IMEI	International Mobile Equipment Identity
LTE	Long Term Evolution
MO	Mobile Originated
MS	Mobile Station (GSM engine), also referred to as TE
MT	Mobile Terminated
NMEA	National Marine Electronics Association
PAP	Password Authentication Protocol
PBCCH	Packet Switched Broadcast Control Channel
PCB	Printed Circuit Board
PCS	Personal Communication System, also referred to as GSM 1900

RF	Radio Frequency
RMS	Root Mean Square (value)
RTC	Real Time Clock
SIM	Subscriber Identification Module
SMS	Short Message Service
SPI	serial peripheral interface
SMPS	Switched-mode power supply
TDMA	Time Division Multiple Access
TE	Terminal Equipment, also referred to as DTE
TX	Transmit Direction
UART	Universal Asynchronous Receiver & Transmitter
VSWR	Voltage Standing Wave Ratio
SM	SIM phonebook
NC	Not connect
EDGE	Enhanced data rates for GSM evolution
HSDPA	High Speed Downlink Packet Access
HSUPA	High Speed Uplink Packet Access
ZIF	Zero intermediate frequency
WCDMA	Wideband Code Division Multiple Access
VCTCXO	Voltage control temperature-compensated crystal oscillator
USIM	Universal subscriber identity module
UMTS	Universal mobile telecommunications system
UART	Universal asynchronous receiver transmitter

D. Safety Caution

Table 44: Safety Caution

Marks	Requirements
	When in a hospital or other health care facility, observe the restrictions about the use of mobiles. Switch the cellular terminal or mobile off, medical equipment may be sensitive and not operate normally due to RF energy interference.
	Switch off the cellular terminal or mobile before boarding an aircraft. Make sure it is switched off. The operation of wireless appliances in an aircraft is forbidden to prevent interference with communication systems. Forgetting to think much of these instructions may impact the flight safety, or offend local legal action, or both.
	Do not operate the cellular terminal or mobile in the presence of flammable gases or fumes. Switch off the cellular terminal when you are near petrol stations, fuel depots, chemical plants or where blasting operations are in progress. Operation of any electrical equipment in potentially explosive atmospheres can constitute a safety hazard.
	Your cellular terminal or mobile receives and transmits radio frequency energy while switched on. RF interference can occur if it is used close to TV sets, radios, computers or other electric equipment.
	Road safety comes first! Do not use a hand-held cellular terminal or mobile when driving a vehicle, unless it is securely mounted in a holder for hands free operation. Before making a call with a hand-held terminal or mobile, park the vehicle.
	GSM cellular terminals or mobiles operate over radio frequency signals and cellular networks and cannot be guaranteed to connect in all conditions, especially with a mobile fee or an invalid SIM card. While you are in this condition and need emergent help, please remember to use emergency calls. In order to make or receive calls, the cellular terminal or mobile must be switched on and in a service area with adequate cellular signal strength. Some networks do not allow for emergency call if certain network services or phone features are in use (e.g. lock functions, fixed dialing etc.). You may have to deactivate those features before you can make an emergency call. Also, some networks require that a valid SIM card be properly inserted in the cellular terminal or mobile.

E. INTEGRATION INSTRUCTIONS

1.1 List of applicable FCC rules

FCC Rule Part 22H, FCC Rule Part 24E and FCC Rule Part 27.

1.2 Summarize the specific operational use conditions

None.

1.3 Limited module procedures

None.

1.4 Trace antenna designs

Refer to sections 4.2 and 4.3.

1.5 RF exposure considerations

For the product, under normal use condition is at least 20cm away from the body of the user, the user must keep at least 20cm distance to the product.

1.6 Antennas

GSM/UMTS/LTE main antenna, UMTS/LTE auxiliary antenna and GNSS antenna.

Antennas type: monopole

1.7 Label and compliance information

If the host is marketed so that end users do not have straight forward commonly used methods for access to remove the module so that the FCC ID of the module is visible; then an additional permanent label referring to the enclosed module: Contains Transmitter Module FCC ID: 2AJYU-8PYA002

1.8 Information on test modes and additional testing requirements

Refer to sections 5.3.

1.9 Additional testing, Part 15 Subpart B disclaimer

The module only complies with the FCC Rule Part 22H, FCC Rule Part 24E and FCC Rule Part 27. If the module is installed in the host device, the host manufacturer is responsible for the compliance to any other FCC rules that apply to the host not covered by the modular transmitter grant of certification. For example, if the host manufacturer markets their product as being Part 15 Subpart B compliant (when it also contains unintentional-radiator digital circuitry), then the host manufacturer shall provide a notice stating that the final host product still requires Part 15 Subpart B compliance testing with the modular transmitter installed.
