

AW-CU429

**Bluetooth 5.1 (LE ONLY) Stamp Module
+ Cortex M33 + Flash + Antenna**

Datasheet

Rev. A

DF

**Feature
Processor**

- 32 kHz up to 96 MHz 32-bit ARM Cortex-M33 with 16 kBytes, 4-way associative cache and FPU Memory
- A flexible and configurable BLE MAC engine implementing the controller.
- A sensor node controller running uCode.
- Optimized power modes (Extended sleep, Deep sleep and Hibernation).

Flash

- 32Mbit SPI Flash

Memory

- 512 kB Data SRAM with retention capabilities
- 4 kB One-Time-Programmable (OTP) Memory.
- 16 kB Cache SRAM with retention capabilities.
- 128 kB ROM (including boot ROM and PKI routines for Flash image authentication).

• Antenna

- Embedded Antenna

IO Interfaces

- Decrypt-on-the-fly QSPI FLASH interface.
- Separate QSPI PSRAM interface.
- Parallel/SPI LCD Controller with own DMA.
- 3 x UARTs up to 1 Mbps, one UART extended to support ISO7816.
- 2 SPI+™ controllers
- 2 I2C controllers at 100 kHz, 400 kHz or 3.4 MHz.

- PDM interface with HW sample rate converter.
- I2S/PCM master/slave interface up to 8 channels.
- USB 1.1 Full Speed device interface.
- 8-channel 10-bit SAR ADC, 3.4 M samples/sec.
- 8-channel 14-bit $\Sigma \Delta$ ADC, 1000 samples/sec.
- Haptic driver interface to LRA/ERM motors.
- 2 matched White LED drivers

Power input

- (2.4 V-4.75 V) Power Input

Package

- Stamp Module 19.6 mm x 15 mm x 2.45 mm

Certifications

- FCC/CE

Application

- Fitness trackers
- Sport watches
- Smartwatches
- Voice-controlled remote controls
- Rechargeable keyboards
- Toys.
- Consumer appliances
- Home automation
- Industrial automation

1. Introduction

1.1 Product Overview

AzureWave presents **AW-CU429** the advanced Stamp **Bluetooth 5.1 module** provides a highly cost-effective, flexible and easy to-use hardware/software device to build a new generation of connected, smart devices. These smart-connected devices enable device to deliver a broad-range of services to consumers including energy-management, demand-response, home automation and remote access. This allows a user to manage comfort and convenience, also run diagnostics and receive alerts and notifications, in addition to managing and controlling the device. Developers can leverage the rich connectivity features of these new smart devices to create a new generation of innovative new applications and services

The device builds upon the success of Dialog's Bluetooth microcontroller device using the Dialog DA14691 and software. Adding new enhancements and capabilities.

The **AW-CU429** is powered by production quality, field-tested Dialog software that includes a rich set of software components that work together to support the development of Smart devices, and enable these devices to connect to mobile clients such as smart-phones, Internet-based Cloud and Smart-Grid services. The feature-rich software stack enables OEMs to focus on application-specific software functionality, thus enabling rapid development and reduced software development costs and risks.

1.2 Specifications Table

1.2.1 General

Features	Description
Product Description	AW-CU429 Bluetooth® Low Energy 5.1(LE ONLY) Stamp Module
Major Chipset	Dialog DA14691
Host Interface	UART / SPI / I2C / PCM/ GPIO / ADC /QSPI/USB 1.1
Dimension	19.6 mm x 15 mm x 2.45 mm
Package	Stamp 79-pin
Antenna	Embedded Antenna
Weight	1.1g

1.2.2 Bluetooth

Features	Description				
Bluetooth Standard	Bluetooth 5.1 complaint (LE ONLY)				
Frequency Rage	2402~2480MHz				
Modulation	LE GFSK				
Output Power (Board Level Limit)*		Min	Typ	Max	Unit
	BLE	-4	-	2	dBm
Receiver Sensitivity	1 Mbps, PER = 30.8 %, Dirty Transmitter: off				
		Min	Typ	Max	Unit
	BLE		-97	-94	dBm
	2 Mbps, PER = 30.8 %, Dirty Transmitter: off				
		Min	Typ	Max	Unit
	BLE		-94.5	-91.5	dBm
Data Rate	Bluetooth® Low Energy 5.1 2 Mbit/s				
Range	TBD				

* If you have any certification questions about output power please contact FAE directly.

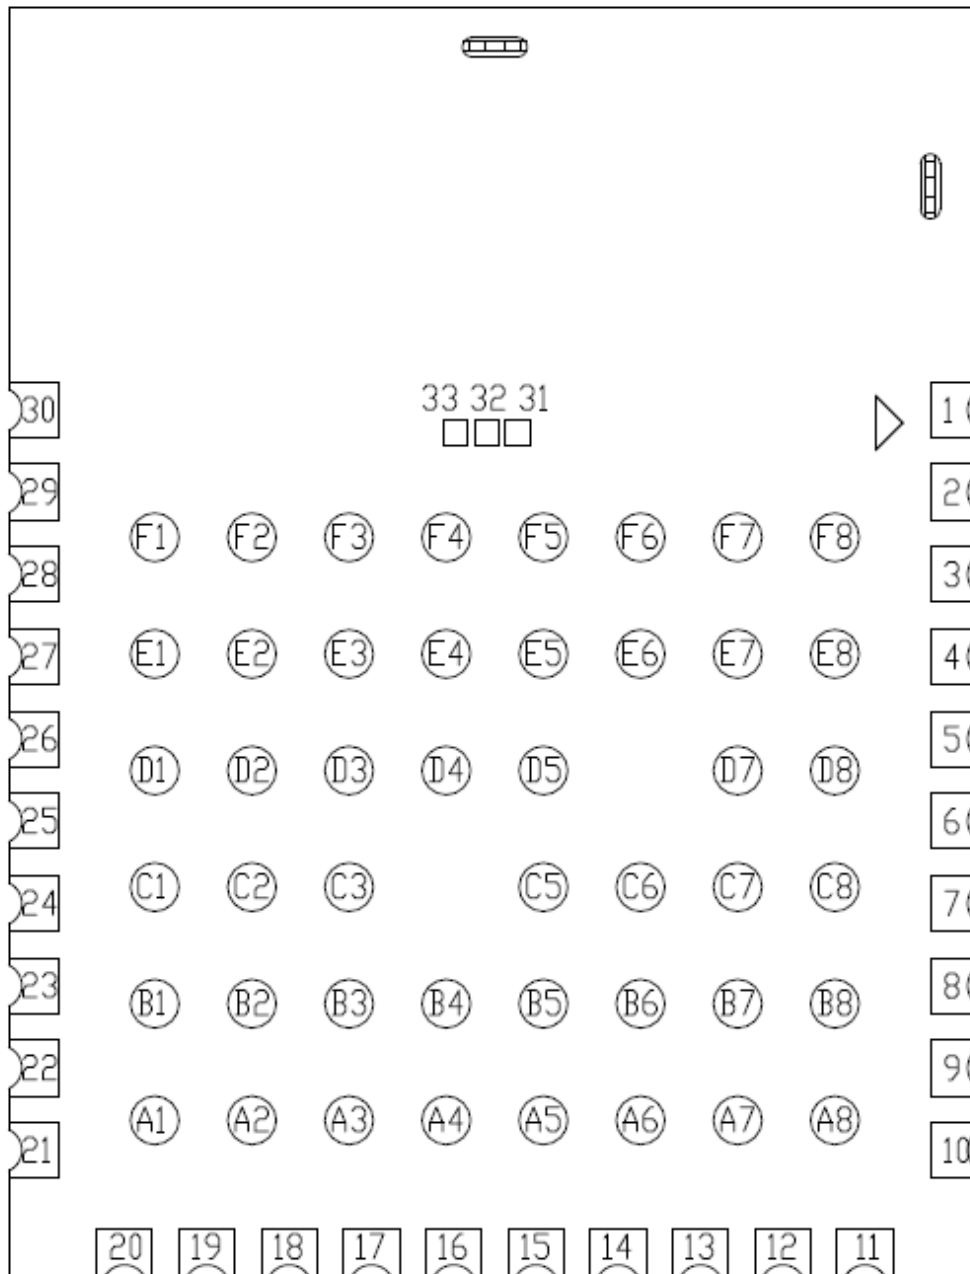

1.2.3 Operating Conditions

Features	Description
Operating Conditions	
Voltage	3.3V (Typical)
Operating Temperature	-40 ~ 85°C
Operating Humidity	Less than 85% R.H.
Storage Temperature	-40 ~ 85°C
Storage Humidity	Less than 60% R.H
ESD Protection	
Human Body Model	2.2KV per JEDEC EID/JESD22-A114
Changed Device Model	500V per JEDEC EIA/JESD22-C101

3.6 I2C Protocols

The I2C Controller has the following protocols:

- START and STOP Conditions
- Addressing Slave Protocol
- Transmitting and Receiving Protocol
- START BYTE Transfer Protocol

3.6.1 START and STOP Conditions

When the bus is idle, both the SCL and SDA signals are pulled high through external pull-up resistors on the bus. When the master wants to start a transmission on the bus, the master issues a START condition. This is defined to be a high-to-low transition of the SDA signal while SCL is 1. When the master wants to terminate the transmission, the master issues a STOP condition. This is defined to be a low-to-high transition of the SDA line while SCL is 1. Below figure shows the timing of the START and STOP conditions. When data is being transmitted on the bus, the SDA line must be stable when SCL is 1.

Figure. Start and Stop conditions

Note: The signal transitions for the START/STOP conditions, as depicted in above figure, reflect those observed at the output signals of the Master driving the I2C bus. Care should be taken when observing the SDA/SCL signals at the input signals of the Slave(s), because unequal line delays may result in an incorrect SDA/SCL timing relationship.

3.7. UART interface

The **AW-CU429**(DA14691) contains two identical instances of this block, i.e. UART and UART2.

The UART is compliant to the industry-standard 16550 and is used for serial communication with a

peripheral. Data is written from a master (CPU) over the APB bus to the UART and it is converted to serial form and transmitted to the destination device. Serial data is also received by the UART and stored for the master (CPU) to read back.

There is also DMA support on the UART block thus the internal FIFOs can be used. Both UARTs support hardware flow control signals (RTS, CTS). **Features**

- 16 bytes Transmit and receive FIFOs
- Hardware flow control support (CTS/RTS)
- Shadow registers to reduce software overhead and also include a software programmable reset
- Transmitter Holding Register Empty (THRE) interrupt mode
- IrDA 1.0 SIR mode supporting low power mode.
- Functionality based on the 16550 industry standard:
- Programmable character properties, such as number of data bits per character (5-8), optional parity bit (with odd or even select) and number of stop bits (1, 1.5 or 2)
- Line break generation and detection
- Prioritized interrupt identification
- Programmable serial data baud rate as calculated by the following: $\text{baud rate} = (\text{serial clock frequency}) / (16 * \text{divisor})$.

3.8. SPI+ interface

This interface supports a subset of the Serial Peripheral Interface (SPI™). The serial interface can transmit and receive 8, 16 or 32 bits in master/slave mode and transmit 9 bits in master mode. The SPI+ interface has enhanced functionality with bidirectional 2x16-bit word FIFOs. SPI is a trademark of Motorola, Inc.

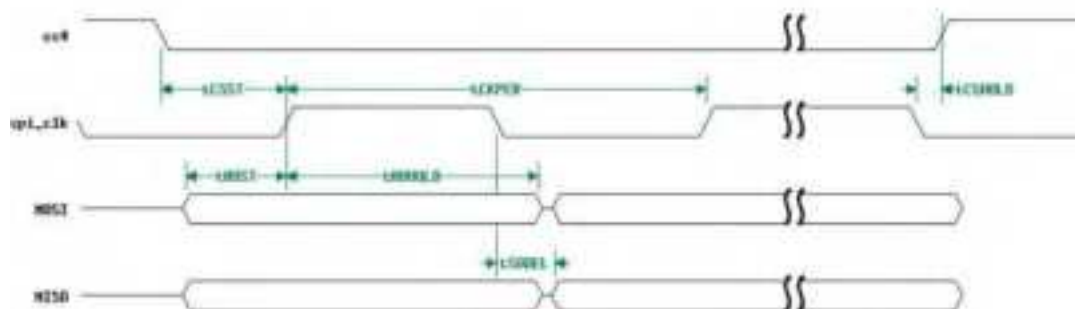

Features

- Slave and Master mode
- 8 bit, 9 bit, 16 bit or 32 bit operation
- Clock speeds up to 16 MHz for the SPI controller. Programmable output frequencies of SPI source clock divided by 1, 2, 4, 8
- SPI clock line speed up to 8 MHz
- SPI mode 0, 1, 2, 3 support (clock edge and phase)
- Programmable SPI_DO idle level
- Maskable Interrupt generation
- Bus load reduction by unidirectional writes-only and reads-only modes.
- Built-in RX/TX FIFOs for continuous SPI bursts.

- DMA support

3.8.1 SPI Timing

The timing of the SPI interface when the SPI controller is in Slave mode is presented in below figure.

Symbol	Parameter	Minimum	Typical	Maximum	Unit
t_{CKPER}	spi_clk clock period			0.25 *	ns
t_{CSST}	CS active time before rising edge	$10.6 + T_{INT}$	$5.2 + T_{INT}$	$3.1 + T_{INT}$	ns
t_{CSHOLD}	CS active time after falling edge	0	0	0	ns
t_{MOST}	Input data latching setup time	2.7	1.5	0.9	ns
t_{MOHOLD}	Input data hold time	0	0	0	ns
t_{SODEL}	Output data hold time	17.2	8.6	5.5	ns

Note T_{INT} represents the internal SPI clock period and is equal to $1.5 * \text{spi_clk period}$.

3.9 Power up Sequence/Rest Timing

3.9.1 Power up sequence

3.9.2 Power-on Reset timing

The AW-CU429 has a RSTN pad which is active low. It contains a RC filter for spikes suppression with 400 k Ω resistor and a 2.8 pF capacitor. It also includes a 25 k Ω pull-up resistor. This pad should be driven externally using a FET or a single button connected to Ground. The typical latency of the RSTN pad is about 2 μ s.

3.10 Power Consumption*

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

IMPORTANT NOTE:

This module is intended for OEM integrator. This module is only FCC authorized for the specific rule parts listed on the grant, and that the host product manufacturer is responsible for compliance to any other FCC rules that apply to the host not covered by the modular transmitter grant of certification. The final host product still requires Part 15 Subpart B compliance testing with the modular transmitter installed.

Additional testing and certification may be necessary when multiple modules are used.

20cm minimum distance has to be able to be maintained between the antenna and the users for the host this module is integrated into. Under such configuration, the FCC radiation exposure limits set forth for an population/uncontrolled environment can be satisfied.

Any changes or modifications not expressly approved by the manufacturer could void the user's authority to operate this equipment.

USERS MANUAL OF THE END PRODUCT:

In the users manual of the end product, the end user has to be informed to keep at least 20cm separation with the antenna while this end product is installed and operated. The end user has to be informed that the FCC radio-frequency exposure guidelines for an uncontrolled environment can be satisfied.

The end user has to also be informed that any changes or modifications not expressly approved by the manufacturer could void the user's authority to operate this equipment.

This device complies with Part 15 of FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

LABEL OF THE END PRODUCT:

The final end product must be labeled in a visible area with the following " Contains TX FCC ID: TLZ-CU429 ".

This device complies with Part 15 of FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.
