English(US/UK)

Thank you for purchasing this product from Perixx. This product has been designed to offer quick installation and operation. With Plug & Play feature, this device does not need a specific driver under Windows XP, Vista, 7, 8.

Connection Setup

1. Remove the battery from the device (Reset Only)
2. Insert the battery, and turn it on
3. Insert the USB Receiver
4. The device should work after a few seconds. If not, please repeat from step 1

Questions and Answers

Q. After I install the wireless device, why it is not working?

A: This is due to the missing of wireless connection. The device is not connecting with the PC, and please setup the connection between the device and the receiver again.

Q. The wireless mouse works in the first few days, but it doesn't work properly now or stops working. Why?

A: When the battery power is low, the mouse may not work properly. Please immediately change a new battery, and it should work again.

Q. The mouse pointer 'jitters'?

A: This is normally due to the surface on which the mouse is being used. To get the best performance from your mouse we recommend that you use a high quality mouse mat; however, in most cases the mouse will operate perfectly on most surfaces except glass or highly reflective surfaces. If in doubt try the mouse on another surface.
