RE: Class II Permissive Change for I28MD-BTC2TY3 Response to RT for Job: 64UC6

Dear Reviewer:

This letter is in response to the RT dated 1/12/2006 requesting the following information:

1. EMC: Please explain/justify in test report/or cover letter compliance with part 15.247 radiated emissions (including intermodulation products) limits while the transmitters operate simultaneously. Is there any degradation of the original data on file at the FCC?

In response to item 1, investigative scans of the RW420 with co-located radios do not show any degradation of the original data with respect to the 15.247 radiated emissions limits.

Please call or email with questions or for additional clarification.

Sincerely,

Alvin Ilarina
SIEMIC Laboratories
