- 1) Please see updated file "2 Declarations.pdf"
- 2) The PWB Back photo has been lightened via software and is included in the updated internal photos.
- 3) The User Guide that was submitted for this product is also used for an associated product – GMLRH-14. The SAR values you refer to in this question are the values for the dual band product. GMLRH-21 is a single-band variant, and has it's own SAR values listed in the UG. See the attached, updated UG excerpt which will be in the final version of the UG.
- 4) See updated report.
- 5) See updated report.
- 6) See updated report. Note that we have used 1% of the emission bandwidth for measurements within 1 MHz of the bandedge. (incorrect, 1%=400Hz not 300)
- 7) See updated report.
- 8) See updated report.
