Re: FCC ID: KBCIX260AC750-MPI
Applicant: Itronix, Inc.

Gentlemen:

The Itronix Model IX260 PC has a Cisco Systems, Inc. FCC ID: LDK102042, Model: MPI350 series, WLAN compact flash card, Intentional Radiator installed within the IX260. This device was originally Certified with a Modular approval. The card is used exactly as supplied by the OEM and is physically and electrically identical as defined by Section 2.908. Two new antennas, allowing diversity tx/rx, are integrated within the IX260 PC on the right and left side of the display. The new antenna model had not previously been tested with this Intentional Radiator, hence a new Certification is being requested.

Spectrum Technology, Incorporated has tested the above referenced Intentional Radiator in accordance with the applicable requirements contained in the Parts 2 and 15 of Title 47, CFR. To the best of my knowledge, these tests were performed using the criteria established in ANSI or other Industry standards. The measurements demonstrate that this Intentional Radiator continues to comply with the limits established in Part 15.247. The receiver is exempt from the Part 15 requirements as it is above 960 MHz. The applicable rule sections are listed in the following test report.

The open area test site used for the radiated emissions measurements is located at Fluke Park II in Everett, Washington. The site information required by Part 2.98, measured in accordance with ANSI C63.4-1992, was most recently renewed with the FCC and accepted by the FCC Sampling and Measurements Branch in August of 2001.

This site is also acceptable to Industry Canada for the performance of radiated measurements. Test Site information required by RSS-212, Issue 1 (provisional) was most recently renewed with IC in January 2002. The site file number is IC 2089.

Sincerely,

A handwritten signature in black ink, appearing to read "Rod Munro", is written over the typed name.

Rod Munro
