Hi Andy,

I have reviewed the document from Nextivity titled "DFS Implementation Proposal for Cel-Fi U-NII Link" Version 0.7 dated February 23, 2009. My review of the document shows that they have made the necessary changes to the previous version as requested by NTIA, therefore we give approval of their proposal on how to test their U-NII device. Since this is a new type of U-NII device, NTIA would like to see the results of their testing once they have been completed. If the devices are tested in the FCC Columbia Laboratory, NTIA would like to witness some of the testing. I will also send a summary letter to the TSC Chairman of this approval for record keeping purposes.
