

**Kyocera Corporation**

---

2-1-1 Kagahara, Tsuzuki-ku, Yokohama-shi, Kanagawa, Japan

We, Kyocera Corporation declare that this EUT (FCC ID: JOYFA85) doesn't have ad Hoc Mode function on "non-US/Canada frequencies".

The EUT does not transmit at channels 12-13 in US and US territories by the following procedure according to FCC doc 594280 D01 Software Configuration Control. The EUT verifies Mobile Country Code (MCC) of the connected cellular network. At the default configuration, the EUT uses the Wi-Fi Configuration file which does not include channels 12-13. If the MCC is Japan, then the EUT uses the Wi-Fi configuration file which includes channels 12-13. If the connected cellular network is changed, the EUT re-check MCC and uses the correct Wi-Fi configuration file.

Should you have any questions or comments regarding this matter, Please have my best attention.

Sincerely yours,

Signature:
