SECTION 1: IDENTIFICATION OF THE TEST LABORATORIA

LABORATORIA DE NAYER <u>Product Certification Centre (PCC)</u>	
J.De Nayerlaan 9 B-2860 St.-Katelijne-Waver Belgium Tel: +32 (0) 15 30 54 00 Fax: +32 (0) 15 32 1212	Direct phone numbers and e-mail address: (Test engineer) J. De Vos +32(0)15 30 54 04 j.de.vos@labodenayer.be

TEST LABORATORY RESPONSIBILITIES			
Function	Name(s)	Date	Signature
Test Operator	Jan De Vos	2019-02-21	
Author Report	Jan De Vos	2019-02-21	
Technical Expert	dr.ir. Dirk Van Troyen	2019-02-21	

041-T – ISO17025

The test report may not be reproduced, unless as a complete packet, without written agreement of Laboratoria De Nayer v.z.w.

The results refer to the described sample or equipment under test only.

Neither the accredited status of Laboratoria De Nayer v.z.w., nor this test report implies that the sample or equipment under test is approved by BELAC or any other establishment.

In case the customer wants to refer to his appeal to our accredited laboratories, he will use the following orequivalent sentence: "Tested by Laboratoria De Nayer, E.M.C.department, accredited by BELAC for EMC-immunity and EMC-emission under registration number 041-T".

SECTION 2: CUSTOMER INFORMATION AND DATES

CUSTOMER INFORMATION	
Company name:	Agfa HealthCare
Address:	Septestraat 27 2640 Mortsel Belgium
Contact person:	Jan Vercammen
Telephone nr:	+32 3 444.62.33
E-mail:	jan.vercammen1@agfa.com
DATES	
Receipt of the EUT:	2019-02-05
Start of tests:	2019-02-05
End of tests:	2019-02-06

SECTION 3: EQUIPMENT UNDER TEST (E.U.T.)

The correctness of the description and identification of the equipment under test, its operating conditions, possible modifications and monitoring of its behaviour during and/ or after the test conditions generated by the De Nayer Environmental Test Laboratory are under the responsibility of the customer.

IDENTIFICATION OF THE E.U.T.

Intended use:	Modular device for wireless interfacing film tags in film tray(s) of printer for medical X-ray film
Manufacturer:	Agfa NV
Model / Type:	The modular device has reference article number A800126.xx, where xx is a version number, mass produced versions have version number 04 or larger
Software Version:	Version of the microcontroller code is DSRFID_V9.1.2.hex
used frequency range:	Carrier frequency is 13.56MHz
Used modulation types :	ISO/IEC 15693
Used antenna:	PCB fixed inductive (coil) antenna
PSU :	+5V
Serial Number:	Device under test s/n PS1904000050
FCC-ID number:	HPL-DSRFID

Illustrations: (Equipment under test)

SECTION 4: TEST SPECIFICATIONS AND TEST METHODS

Applied Tests or Technical Standards		
Emission:		
Test or Technical Standard	Title	
FCC CFR47 part 15	Code of Federal Regulations , part 15 , Subpart C , intentional Radiators	
ANSI C63.10 (2013)	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices	

(*) if the log  is mentioned, the measurement is under accreditation : 041-T – ISO17025

MRA : between E.C. and USA : CAB (EMC) [designation number BE0002] date of validation 15.01.2002

Equipment Classifications

Field Strength Calculation.

The field strength is calculated in the receiver , for conducted emission on the mains LISN-2line is selected , for spurious radiated emission the LDNRE_band-CD (30-1000MHz) and LDNRE_FCChigh(>1GHz) is selected

LISN-2line is the Transducer Factor for the LISN (combination of the attenuation of the LISN and cable in the range 150kHz-30MHz)

LDNRE_band-CD is the Transducer factor for the bilog antenna (combination of the AF of the R&S antenna , pre-amplifier and cables in the range 30MHz-1GHz) .

SECTION 5: OPERATION OF EUT DURING TESTING

The following performance criteria are described in the standard .

Operating modes during emission testing

Two modes are supported: with modulation and without modulation (= carrier only).

SECTION 6: SUMMARY OF TEST RESULTS

6.1 Test results of the tests.

emission measurement according to : FCC part 15		
Test §	The EUT complies limits	remarks
§ 15.207 : AC power conducted emissions	yes	1
§ 15.225 radiated emissions 9k-1GHz	yes	
§ 15.225 Operation within the band	yes	
§ 15.225 frequency tolerance	yes	
§ 15.225 Occupied bandwidth	yes	

Remark 1 : tested with +5Vdc power

Section 15.19 Labelling requirements.

(3) All other devices shall bear the following statement in a conspicuous location on the device:

This device complies with Part 15 of the FCC Rules.
Operation is subject to the following two conditions:
(1) this device may not cause harmful interference,
and (2) this device must accept any interference received, including
interference that may cause undesired operation.

(b) Products subject to authorization under a Declaration of Conformity shall be labeled as follows:

(1) The label shall be located in a conspicuous location on the device and shall contain the unique identification described in Section 2.1074 of this chapter and the following logo:

(i) If the product is authorized based on testing of the product or system; or

SECTION 7: DETAILED TEST RESULTS

7.1. EMISSION TEST

The test has been performed according to the standard: CFR 47 part15 Subpart c.

7.1 CONDUCTED EMISSION TEST : power

CONDITIONS

The equipment was placed at ± 40 cm above the floor.
The test has been performed in a shielded room.
The conducted emission level was measured with a LISN according to CISPR16/ANSI C63.4 (0.15 MHz-30 MHz).
Test voltage : 5Vdc
Test specification : ANSI C63.10 section 6.2
Specification reference : C.F.R.47 part 15.207
The upper limit line is the quasi-peak limit line .
The lower limit line is the average limit line.
Test date : 2019-02-06

Test equipment :
Receiver: R&S ESU40 , MN20112350
Limiter : R&S ESH3Z2 , MN : 2006150
LISN : R&S ESH2-Z5 , MN149028
Cables : IR07 , 192 , 194

Hardware Setup:	LISN-2line
Receiver:	[ESU 40]
Level Unit:	dB μ V

7.3 Field strength within band

CONDITIONS
Specification reference : C.F.R.47 part 15.225(a,b,c) (a) The field strength of any emissions within the band 13.553-13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters. (b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the field strength of any emissions shall not exceed 334 microvolts/meter at 30 meters. (c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the field strength of any emissions shall not exceed 106 microvolts/meter at 30 meters. Used test distance : 1m and 1m limit line Used Test voltage : +5Vdc The limit line 1 is the quasi-peak limit line Test date : 2019-02-06
Receiver: R&S ESU40 , MN : 20112350 Antenna : EMCO6502 , MN:20112384 Turntable : RST 073 Controller : RSC 02

Calculation limits : limits in standard @30m : 15,848µV/m is 84dBµV/m @30m
Distance correction factor (refer 15.31) : by using the square of an inverse linear distance extrapolation factor (40 dB/decade). In case of a measurement distance of 3m : $40 \cdot \log(30/1) = 59\text{dB}$

Hardware Setup:	FCC-Efield-1356

CONDITIONS

§15.215 Additional provisions to the general radiated emission limitations.

(a) The regulations in §§15.217 through 15.257 provide alternatives to the general radiated emission limits for intentional radiators operating in specified frequency bands. Unless otherwise stated, there are no restrictions as to the types of operation permitted under these sections.

(b) In most cases, unwanted emissions outside of the frequency bands shown in these alternative provisions must be attenuated to the emission limits shown in §15.209. In no case shall the level of the unwanted emissions from an intentional radiator operating under these additional provisions exceed the field strength of the fundamental emission.

(c) Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§15.217 through 15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated. In the case of intentional radiators operating under the provisions of subpart E, the emission bandwidth may span across multiple contiguous frequency bands identified in that subpart. The requirement to contain the designated bandwidth of the emission within the specified frequency band includes the effects from frequency sweeping, frequency hopping and other modulation techniques that may be employed as well as the frequency stability of the transmitter over expected variations in temperature and supply voltage. If a frequency stability is not specified in the regulations, it is recommended that the fundamental emission be kept within at least the central 80% of the permitted band in order to minimize the possibility of out-of-band operation.

7.7 Test dates and Climate conditions.

date	2019-02-05 and 06
ambient temperature	20/22°C
relative humidity	40/38%
atmospheric pressure	1026/1022 hPa

SECTION 8: MEASUREMENT UNCERTAINTIES

item	uncertainty
RF frequency	$\pm 1 \times 10^{-8}$
RF field radiated	$\pm 5.0\text{dB}$
Temperature	$\pm 1^{\circ}\text{C}$
Humidity	$\pm 5\%$
CE mains 150k-30M	$\pm 2.4\text{dB}$

SECTION 9: ADDITIONAL INFORMATION GIVEN BY THE CUSTOMER

Applicant's role during testing

Connecting and brings the EUT in operating mode.
Witness testing

EUT information given by the customer

Auxiliary equipment connected during testing

PC : laptop Dell latitude E5470 , SW Drystar RFID tester 3

Cables

Cable used is 6 discrete non-twisted wires in plastic sheet, there is no metal shielding, only 5 wires are used: the communication is RX/TX pair RS232 9600 baud, voltage is 5V (polyfuse on RFID reader) and one signal can be used to reset the RFID reader (buffered over RS232).
The cable length used in the emission test was about 10m. This cable connects the RFID reader to the aux equipment outside the shielded room. It is possible to use an USB derived 5V or a external bench power supply set to 5V (e.g. was used for frequency tolerance test voltage test).

SECTION 10: MODIFICATIONS OF EUT

MODIFICATIONS OF EUT : none

SECTION 12: ACCREDITATION CERTIFICATE

	Organisme belge d'Accréditation Belgische Accreditatieinstelling Belgische Akkreditierungsstelle Belgian Accreditation Body Signatory to EA, ILAC and IAF Multilateral Agreements	Accreditation Certificate No. 041-TEST
In compliance with the provisions of the Royal Decree of 31 January 2006 setting up BELAC, the Accreditation Board hereby declares, that the test laboratory		
LABORATORIA DE NAYER VZW J.P De Nayerlaan, 9 2860 SINT-KATELIJNE-WAVER - Belgium		
has the competence to perform the tests as described in the annex which is an integral part of the present certificate, in accordance with the requirements of the standard EN ISO/IEC 17025:2005. The present accreditation is the subject of regular surveillance in order to confirm the compliance with the accreditation conditions.		
The Chair of the Accreditation Board BELAC,		
Issue date : 2018-12-13 Validity date : 2024-01-07 Original version of this certificate is in Dutch.		 Nicole MEURÉE-VANLAETHEM

Test Firm Name: Laboratoria De Nayer
Designation Number: BE0002
Test Firm Registration Number: 963303

Subject: FCC recognition of accreditation for Laboratoria De Nayer

We have been notified by SPF Economie, PME, Classes moyennes et Energie that Laboratoria De Nayer has been accredited as a testing laboratory.

At this time Laboratoria De Nayer is hereby recognized to perform compliance testing on equipment subject to the Commission's Declaration Of Conformity (DOC) and Certification rules for the following scope(s):

Unintentional Radiators - FCC Part15, Subpart B
Industrial, Scientific, and Medical Equipment - FCC Part 18
Intentional Radiators - FCC Part 15 Subpart C

This recognition will expire upon expiration of the accreditation or notification of withdrawal of Commission's recognition.

Any questions about this recognition should be submitted as an inquiry to the FCC Knowledge Database at www.fcc.gov/kdb.
