

FCC USER'S MANUAL REQUEST

To the FCC:

The H9PCST3040K088R1 Part 15 Subpart C Certification application is a product that is circuit board electrically identical to our H9PLA24005AZL approval. The H9PLA24005AZL approval was based on a PCMCIA card footprint, for the H9PCST3040K088R1 approval the circuit board was the same but the PCMCIA card enclosure had to be removed so a new Certification was applied for.

As stated above the new certification is for a radio that is compatible with Symbol's 1Mb S24 radio (LA24005AZL). The new radio is to work as part of the Portable Shopping System as outlined in the Installation Guide. Included here is the presently planned Installation Guide. Also included here is a Regulatory Addendum that will be included in the final User's Guide and the Installation Guide. The regulatory addendum included with this submission will be added to the included Installation Guide and to the final User's guide. The Regulatory addendum has the FCC CFR 47 Part 15.105 information to the user, FCC CFR 47 Part 15.21 information to user warning against modifying the radio and the RF safety warning.

If you have any questions about the above please don't hesitate to ask.

Thank You
Sandy Mazzola
